**OWNER'S MANUAL 2021** 

# 690 SMC R

Art. no. 3214281en

Congratulations on your decision to purchase a KTM motorcycle. You are now the owner of a state-of-the-art sports vehicle which, with appropriate care, will bring you pleasure for a long time to come. We wish you good and safe riding at all times!

Enter the serial numbers of your vehicle below.

| Vehicle identification number (📖 p. 12) | Dealer's stamp |
|---|----------------|
| Engine number (📖 p. 13)                 |                |
| Key number (🕮 p. 12)                    |                |
|   |                |

The Owner's Manual contained the latest information for this model series at the time of publication. However, minor differences due to further developments in design cannot be ruled out completely.

All specifications contained herein are non-binding. KTM Sportmotorcycle GmbH specifically reserves the right to modify or delete technical specifications, prices, colors, forms, materials, services, designs, equipment, etc., without prior notice and without specifying reasons, to adapt these to local conditions, as well as to stop production of a particular model without prior notice. KTM accepts no liability for delivery options, deviations from figures and descriptions, misprints, and other errors. The models portrayed partly contain special equipment that does not belong to the regular scope of supply.

INDEX ...... 125

# 1.1 Symbols used

|          | Symbols used   |
|----------|--|
| The mean | ing of specific symbols is described below.  |
|          | Indicates an expected reaction (e.g. of a work step or a function).  |
| X        | Indicates an unexpected reaction (e.g. of a work step or a function).  |
| 2        | All work marked with this symbol requires specialist knowledge and technical understanding.<br>In the interest of your own safety, have these jobs performed by an authorized KTM workshop!<br>Your motorcycle will be optimally cared for there by specially trained experts using the auxiliary<br>tools required. |
|          | Indicates a page reference (more information is provided on the specified page).   |
| i        | Indicates information with more details or tips.   |
| <b>»</b> | Indicates the result of a testing step.  |
| V        | Indicates a voltage measurement.   |
| A        | Indicates a current measurement.   |
| -        | Indicates the end of an activity, including potential rework.  |

#### 1.2 Formats used

The typographical formats used in this document are explained below.

| Proprietary name | Indicates a proprietary name.   |
|------------------|---|
| Name®            | Indicates a protected name.   |
| Brand™           | Indicates a brand available on the open market.   |
| Underlined terms | Refer to technical details of the vehicle or indicate technical terms, which are explained in the glossary. |

#### 2.1 Use definition – intended use

The vehicle is designed and constructed to withstand the usual demands of regular traffic and use on gentle terrain (unpaved roads).

This vehicle is not suitable for use on race tracks.

This vehicle is only authorized for operation on public roads in its homologated version.

#### 2.2 Misuse

The vehicle must only be used as intended.

Dangers can arise for people, property and the environment through use not as intended.

Any use of the vehicle beyond the intended and defined use constitutes misuse.

Misuse also includes the use of operating and auxiliary fluids which do not meet the required specification for the respective use.

#### 2.3 Safety advice

A number of safety instructions need to be followed to operate the product described safely. Therefore read this instruction and all further instructions included carefully. The safety instructions are highlighted in the text and are referred to at the relevant passages.

#### Info

Various information and warning labels are attached in prominent locations on the product described. Do not remove any information or warning labels. If they are missing, you or others may not recognize dangers and may therefore be injured.

#### 2.4 Degrees of risk and symbols

Identifies a danger that will immediately and invariably lead to fatal or serious permanent injury if the appropriate measures are not taken.

#### Warning

Danger

Identifies a danger that is likely to lead to fatal or serious injury if the appropriate measures are not taken.

Caution

Identifies a danger that may lead to minor injuries if the appropriate measures are not taken.

#### Note

Identifies a danger that will lead to considerable machine and material damage if the appropriate measures are not taken.

Indicates a danger that will lead to environmental damage if the appropriate measures are not taken.

#### 2.5 Tampering warning

Tampering with the noise control system is prohibited. Federal law prohibits the following acts or the causing thereof:

- 1 The removal or rendering inoperative by any person other than for purposes of servicing, repair, or replacement, of any device or element of design incorporated into any new vehicle for the purpose of noise control prior to its sale or delivery to the ultimate purchaser or while it is in use, or
- 2 the use of the vehicle after such device or element of design has been removed or rendered inoperative by any person.

Among those acts presumed to constitute tampering are the acts listed below:

- 1 Removal or puncturing of the main silencers, baffles, header pipes or any other components which conduct exhaust gases.
- 2 Removal or puncturing of parts of the intake system.
- 3 Lack of proper maintenance.
- 4 Replacing moving parts of the vehicle, or parts of the exhaust system or intake system, with parts other than those specified by the manufacturer.

#### 2.6 Safe operation

#### Danger

**Danger of accidents** A rider who is not fit to ride poses a danger to him or herself and others.

- Do not operate the vehicle if you are not fit to ride due to alcohol, drugs or medication.
- Do not operate the vehicle if you are physically or mentally impaired.

#### Danger

Danger of poisoning Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use effective exhaust extraction when starting or running the engine in an enclosed space.

#### Warning

Danger of burns Some vehicle components become very hot when the vehicle is operated.

- Do not touch any parts such as the exhaust system, radiator, engine, shock absorber, or brake system before the vehicle parts have cooled down.
- Let the vehicle parts cool down before you perform any work on the vehicle.

Only operate the vehicle when it is in perfect technical condition, in accordance with its intended use, and in a safe and environmentally compatible manner.

An appropriate driver's license is needed to drive the vehicle on public roads.

Have malfunctions that impair safety promptly eliminated by an authorized KTM workshop.

Adhere to the information and warning labels on the vehicle.

#### 2.7 Protective clothing

### Warning

**Risk of injury** Missing or poor protective clothing presents an increased safety risk.

- Wear appropriate protective clothing such as helmet, boots, gloves as well as trousers and a jacket with protectors on all rides.
- Always wear protective clothing that is in good condition and meets the legal regulations.

In the interest of your own safety, KTM recommends that you only operate the vehicle while wearing protective clothing.

#### 2.8 Work rules

Unless specified otherwise, the ignition must be turned off during all work (models with ignition lock, models with remote key) or the engine must be at a standstill (models without ignition lock or remote key).

Special tools are necessary for certain tasks. The tools are not a component of the vehicle, but can be ordered using the number in parentheses. Example: bearing puller (15112017000)

During assembly, use new parts to replace parts which cannot be reused (e.g. self-locking screws and nuts, expansion screws, seals, sealing rings, O-rings, pins, and lock washers).

In the case of certain screws, a screw adhesive (e.g. Loctite®) is required. Observe the manufacturer's instructions.

If thread locker (e.g., **Precote**<sup>®</sup>) has already been applied to a new part, do not apply any additional thread locker. After disassembly, clean the parts that are to be reused and check them for damage and wear. Change damaged or worn parts.

After completing a repair or service work, check the operating safety of the vehicle.

#### 2.9 Environment

If you use your motorcycle responsibly, you can ensure that problems and conflicts do not occur. To protect the future of the motorcycle sport, make sure that you use your motorcycle legally, display environmental consciousness, and respect the rights of others.

When disposing of used oil, other operating and auxiliary fluids, and used components, comply with the laws and regulations of the respective country.

Because motorcycles are not subject to the EU regulations governing the disposal of used vehicles, there are no legal regulations that pertain to the disposal of an end-of-life motorcycle. Your authorized KTM dealer will be glad to advise you.

#### 2.10 Owner's Manual

Read this owner's manual carefully and completely before making your first trip. The Owner's Manual contains useful information and many tips on how to operate, handle, and service your motorcycle. This is the only way to find out how best to customize the vehicle for your own use and how you can protect yourself from injury.

#### e Tip

Store the Owner's Manual on your terminal device, for example, so that you can read it whenever you need to.

If you would like to know more about the vehicle or have questions on the material you read, please contact an authorized KTM dealer.

The Owner's Manual is an important component of the vehicle. If the vehicle is sold, the Owner's Manual must be downloaded again by the new owner.

The Owner's Manual can be downloaded several times using the QR code or the link on the delivery certificate.

The Owner's Manual is also available for download from your authorized KTM dealer and on the KTM website. A printed copy can also be ordered from your authorized KTM dealer. International KTM Website: http://www.ktm.com

#### 3.1 Manufacturer warranty, implied warranty

The work prescribed in the service schedule must only be carried out in an authorized KTM workshop and confirmed in the **KTM Dealer.net**, as otherwise all warranty claims will be void. Damage or secondary damage caused by tampering with and/or conversions on the vehicle are not covered by the manufacturer warranty.

#### 3.2 Fuel, auxiliary substances

#### 2 Note

**Environmental hazard** Improper handling of fuel is a danger to the environment.

Do not allow fuel to enter the groundwater, the soil, or the sewage system.

Use fuels and auxiliary substances in accordance with the Owner's Manual and specification.

#### 3.3 Spare parts, accessories

For your own safety, only use spare parts and accessory products that are approved and/or recommended by KTM and have them installed by an authorized KTM workshop. KTM accepts no liability for other products and any resulting damage or loss.

Certain spare parts and accessory products are specified in parentheses in the descriptions. Your authorized KTM dealer will be glad to advise you.

The current **KTM PowerParts** for your vehicle can be found on the KTM website. International KTM Website: http://www.ktm.com

#### 3.4 Service

A prerequisite for perfect operation and prevention of premature wear is that the service, care, and tuning work on the engine and chassis is properly carried out as described in the Owner's Manual. An incorrect suspension setting can lead to damage and breakage of chassis components.

Use of the vehicle under difficult conditions, such as dusty environments, heavy rain, high heat or with a heavy load, can lead to considerably more rapid wear of components such as the air filter, drive train, brake system, or suspension components. For this reason, it may be necessary to inspect or replace parts before the next scheduled service.

It is imperative that you adhere to the stipulated run-in times and service intervals. If you observe these exactly, you will ensure a much longer service life for your motorcycle.

The relevant mileage or time interval is whichever occurs first.

#### 3.5 Figures

The figures contained in the manual may depict special equipment.

In the interest of clarity, some components may be shown disassembled or may not be shown at all. It is not always necessary to disassemble the component to perform the activity in question. Please follow the instructions in the text.

#### 3.6 Customer service

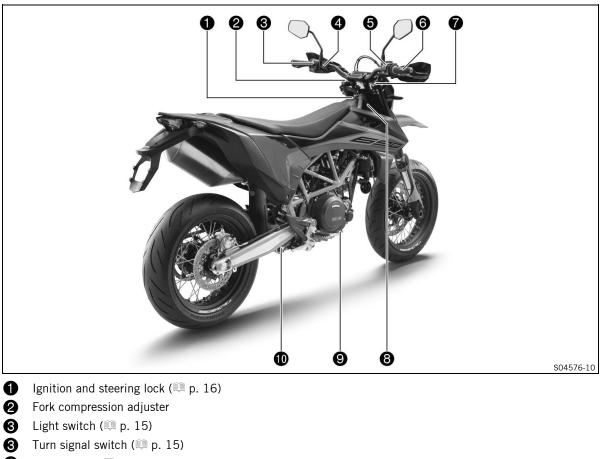

Your authorized KTM dealer will be happy to answer any questions you may have on your vehicle and KTM.

A list of authorized KTM dealers can be found on the KTM website. International KTM Website: http://www.ktm.com

# 4 VIEW OF VEHICLE

4.1 View of vehicle, front left (example) 8 6 6 4 S04575-10 Hand brake lever (🕮 p. 14) 0 0 Clutch lever (💷 p. 14) 6 Fuel tank filler cap 6 Seat release (🕮 p. 17) 4 Side stand (🕮 p. 19) 6 Shift lever (🕮 p. 18) 6 Compression damping of the shock absorber (IIII p. 42)

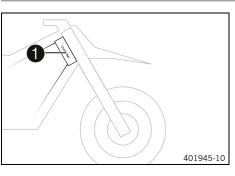

4.2 View of vehicle, rear right (example)

- **3** Horn button (I p. 14)
- **4** Combination switch (≅ p. 16)
- **5** Emergency OFF switch (I p. 15)
- 5 Start button (🕮 p. 15)
- 6 Throttle grip (🕮 p. 14)
- **7** Fork rebound adjustment
- 8 Vehicle identification number (🕮 p. 12)
- 9 Foot brake lever (🕮 p. 19)
- **(D)** Shock absorber rebound adjuster

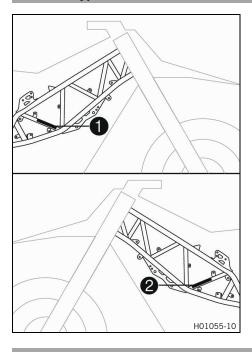

# **5 SERIAL NUMBERS**

### 5.1 Vehicle identification number

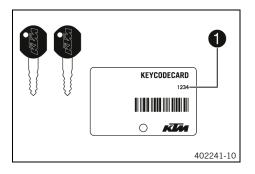

The vehicle identification number **1** is stamped on the right side of the steering head.

#### 5.2 Type label

The Europe type label ① is located on the right side of the frame. The Australia type label ② is located on the left side of the frame.

### 5.3 Key number

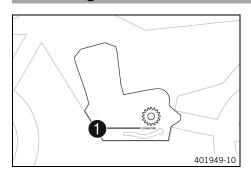

#### The key number ① can be found on the **KEYCODECARD**.

Info

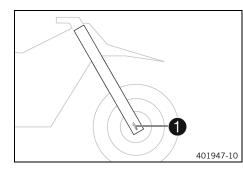

You need the key number to order a spare key. Keep the **KEYCODECARD** in a safe place.

## 5.4 Engine number

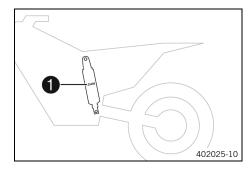

The engine number **1** is stamped on the left side of the engine under the engine sprocket.

5.5 Fork part number

The fork part number  $\ensuremath{f 0}$  is stamped on the inner side of the fork stub.

#### 5.6 Shock absorber article number

The shock absorber article number **①** is on the left side of the shock absorber.

# **6 CONTROLS**

### 6.1 Clutch lever

Clutch lever **1** is fitted on the handlebar on the left. The clutch is activated hydraulically and adjusts itself automatically.

#### 6.2 Hand brake lever

The hand break lever ① is fitted on the right side of the handlebar.

The hand brake lever operates the front brake.

#### 6.3 Throttle grip

The throttle grip ① is fitted on the right side of the handlebar.

#### 6.4 Horn button

#### Horn button **1** is fitted on the left side of the handlebar.

#### Possible states

- The horn button  $\blacktriangleright$  is in the basic position
- The horn button  $\bowtie$  is pressed The horn is operated in this position.

### 6.5 Light switch

The light switch ① is fitted on the left side of the handlebar. **Possible states** 

| ≣D | Low beam on – Light switch is turned downward. In<br>this position, the low beam and tail light are switched<br>on. |
|----|---|
| ≣D | High beam on – Light switch is turned upward. In this position, the high beam and tail light are switched on.       |

#### 6.6 Turn signal switch

The turn signal switch **1** is fitted on the left side of the handlebar.

#### Possible states

|   | Turn signal off   |
|---|---|
| Ŷ | Turn signal light, left, on – Turn signal switch pressed<br>to the left. The turn signal switch returns automati-<br>cally to the central position after use. |
| ₽ | Turn signal light, right, on – Turn signal switch<br>pressed to the right. The turn signal switch returns<br>automatically to the central position after use. |

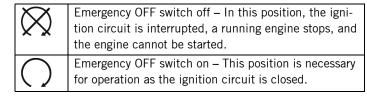

To switch off the turn signal light, press the turn signal switch towards the switch case.

#### 6.7 Emergency OFF switch

The emergency OFF switch **1** is fitted on the right side of the handlebar.

#### Possible states

#### 6.8 Start button

Start button **()** is fitted on the right side of the handlebar.

#### Possible states

- The start button ③ is in the basic position
- The start button ③ is pressed In this position, the starter motor is actuated.

# 6 CONTROLS

#### 6.9 Combination switch

The combination switch is fitted on the left side of the handlebar. **Possible states** 

| 1   | <b>STREET</b> – Riding mode <b>STREET</b> and traction control are activated when LED <b>1</b> lights up.  |
|-----|--|
| 1TC | <b>STREET</b> without TC – When LEDs <b>1</b> and <b>TC</b> light up, riding mode <b>STREET</b> is active and traction control is deactivated.                               |
| 2   | <b>SPORT</b> – If LED <b>2</b> is lit up, riding mode <b>SPORT</b> ,<br>a subsequently active traction control and ABS<br>mode <b>Supermoto</b> are activated.               |
| 2TC | <b>SPORT</b> without TC – If LEDs <b>2</b> and <b>TC</b> are lit up, riding mode <b>SPORT</b> and ABS mode <b>Supermoto</b> are active. The traction control is deactivated. |

The combination switch displays the current riding mode and traction control setting.

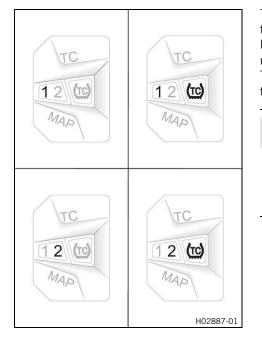

Press button **MAP** on the combination switch to change the riding mode, the traction control and the ABS mode.

The traction control is activated or deactivated using button  $\ensuremath{\text{TC}}$  on the combination switch.

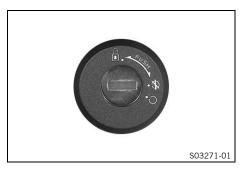

#### Info

Each time the ignition is switched on, all three switch LEDs light up for a function check.

If all three LEDs light up during operation, a malfunction has been detected by the engine control unit. Contact an authorized KTM workshop immediately.

### 6.10 Ignition and steering lock

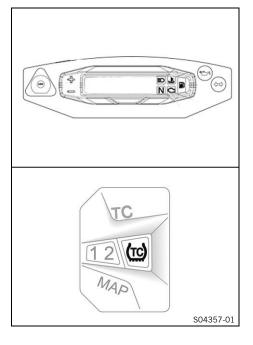

The ignition and steering lock is located in front of the seat.

#### Possible states

| $\bigotimes$ | Ignition off – In this position, the ignition circuit<br>is interrupted, a running engine stops, and a<br>non-running engine will not start. The ignition key can<br>be removed. |
|--------------|--|
| $\bigcirc$   | Ignition on – In this position, the ignition circuit is closed and the engine can be started.  |
| Ţ            | Steering locked – In this position, the ignition circuit is interrupted and the steering locked. The ignition key can be removed.  |

# 6.11 Overview of indicator lamps

| Possible states |  |  |
|-----------------|--|--|
| ABS             | ABS warning lamp lights up/flashes yellow – If the<br><u>ABS</u> warning lamp lights up, the ABS is not active.<br>The ABS warning lamp also lights up if a malfunc-<br>tion is detected. Contact an authorized KTM work-<br>shop. If the ABS warning lamp flashes slowly, ABS<br>mode <b>Supermoto</b> is active.   |  |
|                 | The high beam indicator lamp lights up blue – The high beam is switched on.  |  |
|                 | Fuel level warning lamp lights up orange – The fuel level has reached the reserve mark.  |  |
|                 | Malfunction indicator lamp lights up orange – The <u>OBD</u> has detected a malfunction in the vehicle electronics. Come safely to a halt, and contact an authorized KTM workshop.   |  |
|                 | The coolant temperature warning lamp lights up red<br>– The coolant temperature has reached a critical<br>value. Stop immediately (taking care not to endanger<br>yourself or other road users in the process), switch<br>off the engine, allow it to cool down and check the<br>coolant level.  |  |
| N               | The idle indicator lamp lights up green – The trans-<br>mission is in neutral.   |  |
|                 | Turn signal indicator lamp flashes green – The turn signal is switched on.   |  |
| <b>4</b>        | The oil pressure warning lamp lights up red – The oil pressure is too low. Stop immediately, taking care not to endanger yourself or other road users in the process, and switch off the engine.   |  |
|                 | TC indicator lamp lights up/flashes yellow – If the TC indicator lamp lights up, the <u>cornering MTC</u> (P 2, 35) is not active. If the TC indicator lamp and both riding mode lamps light up at same time, a malfunction has been detected. Contact an authorized KTM workshop. The TC indicator lamp flashes if the <u>cornering MTC</u> actively engages. |  |

### 6.12 Seat release

The loop 1 unlocks the seat.

#### • Info

The loop for unlocking the seat is located under the fuel tank cap.

### 6.13 Grab handles

#### 6.14 Passenger foot pegs

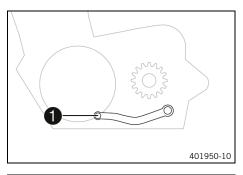

The grab handles **1** are used for moving the motorcycle around. If you carry a passenger, the passenger can hold onto the grab handles during the trip.

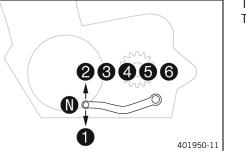

The passenger foot pegs can be folded up and down. **Possible states** 

- Passenger foot pegs folded up For operation without a passenger.
- Passenger foot pegs folded down For operation with a passenger.

### 6.15 Shift lever

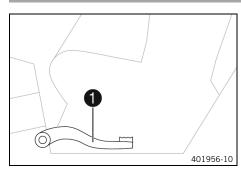

The shift lever **1** is mounted on the left side of the engine.

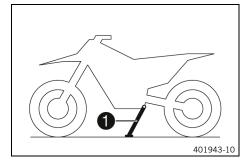

The gear positions can be seen in the photograph. The neutral or idle position is between the first and second gears.

#### 6.16 Foot brake lever

Foot brake lever **1** is located in front of the right footrest. The rear brake is engaged with the foot brake lever.

#### 6.17 Side stand

Side stand **①** is located on the left of the vehicle. The side stand is used for parking the motorcycle.

#### Info

The side stand must be folded up during motorcycle use. The side stand is coupled with the safety starting system – see the riding instructions.

#### **Possible states**

- Side stand folded out The vehicle can be supported on the side stand. The safety starting system is active.
- Side stand folded in This position is mandatory when riding the motorcycle. The safety starting system is inactive.

#### 6.18 Opening the fuel tank filler cap

#### Danger

**Fire hazard** Fuel is highly flammable.

The fuel in the fuel tank expands when warm and can escape if overfilled.

- Do not fuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

#### Warning

Danger of poisoning Fuel is poisonous and a health hazard.

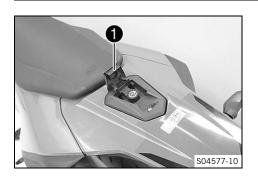

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.
- Keep fuels correctly in a suitable canister, and out of the reach of children.

Note

**Environmental hazard** Improper handling of fuel is a danger to the environment.

- Do not allow fuel to enter the groundwater, the soil, or the sewage system.

Lift cover ① of fuel tank filler cap and insert the ignition key.
Turn the ignition key 90° counterclockwise and take off the fuel tank filler cap.

#### • Info

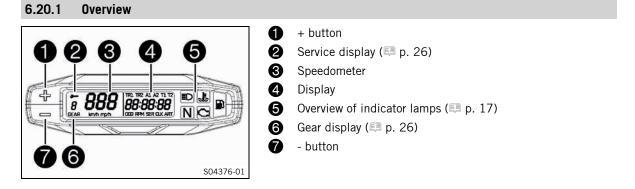

The fuel tank filler cap has a fuel tank breather.

### 6.19 Closing the fuel tank filler cap

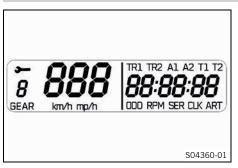

- Put the fuel tank filler cap back on and turn the ignition key 90° clockwise.
- Remove the ignition key and close the cover.

#### 6.20 Dash

#### 6.20.2 Activation and test

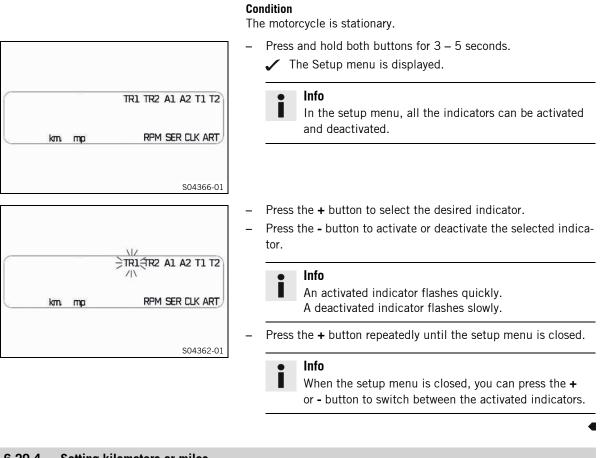

#### Activating combination instrument

The combination instrument is activated when the ignition is switched on.

#### Display test

To enable you to check that the display is functioning properly, all display segments light up briefly.

#### 6.20.3 Setting the combination instrument

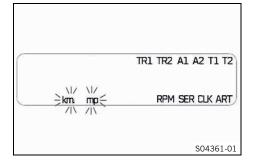

#### 6.20.4 Setting kilometers or miles

#### Info

If the unit is changed, the value is retained and converted accordingly. Make the setting according to the country.

#### Condition

The motorcycle is stationary.

- Press and hold both buttons for 3 5 seconds.
   The Setup menu is displayed.
- Press the + button repeatedly until kmor mp flashes on the indicator.
- Press the button to change from km to mp or from mp to km.
  Press the + button.
  - $\checkmark$  The settings are adopted and the setup menu is closed.

#### 6.20.5 Setting the clock

#### Condition

The motorcycle is stationary.

# **6 CONTROLS**

6.20.6 Setting the service interval

- Press the + or button until the indicator **CLK** appears in the combination instrument.
- Press and hold the button for 3-5 seconds.
- The combination instrument switches to the clock setting mode.
- Press the button to select the 24 h display or 12 h display for the clock.
- Confirm the selection using the + button.
  - The setting is adopted and the combination instrument changes to the next menu item.
- Press the button to set the hour.
- Confirm the selection using the + button.
  - The setting is adopted and the combination instrument changes to the next menu item.
- Press the button to set the minute.
- Confirm the selection using the + button.
  - $\checkmark$  The setting is adopted and the setting mode is closed.

#### Condition

The motorcycle is stationary.

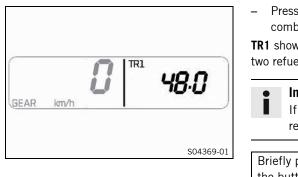

- Press the + or button repeatedly until SER is shown on the combination instrument.
- Press the button repeatedly until the service interval display starts flashing.
  - Press the button repeatedly until the desired service interval is displayed.

• Info

The indicator can be set within the range of 500 to 10,000.

 Press and hold the - button for 3–5 seconds until the indicator is no longer flashing.

6.20.7 Distance 1

Press the + or - button repeatedly until TR1 is shown on the combination instrument.

**TR1** shows the distance 1 since the last reset, such as between two refueling stops.

| Briefly press the button —. | Next display mode    |
|-----------------------------|----------------------|
|                             | TR1 is reset to 0.0. |
| ton – for 2–3               |                      |
| seconds.                    |                      |

#### 6.20.8 Distance 2

 Press the + or - button repeatedly until TR2 is shown on the combination instrument.

**TR2** shows the distance 2 since the last reset, such as between two refueling stops.

#### Info

If the value of 9999.9 is exceeded, **TR2** is automatically reset to 0.0.

| Briefly press<br>the button +.            | Next display mode    |
|---|----------------------|
| Briefly press the button .                | Next display mode    |
| Press the but-<br>ton for 2–3<br>seconds. | TR2 is reset to 0.0. |

6.20.9 Average speed 1

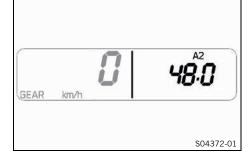

Press the + or - button repeatedly until A1 is shown on the combination instrument.

 $\ensuremath{\textbf{A1}}$  shows average speed 1 since the last reset.

| Briefly press<br>the button <b>+</b> .    | Next display mode   |
|---|---------------------|
| Briefly press<br>the button —.            | Next display mode   |
| Press the but-<br>ton for 2–3<br>seconds. | A1 is reset to 0.0. |

#### 6.20.10 Average speed 2

- Press the + or button repeatedly until A2 is shown on the combination instrument.
- **A2** shows average speed 2 since the last reset.

| Briefly press<br>the button +.              | Next display mode   |
|---|---------------------|
| Briefly press the button —.                 | Next display mode   |
| Press the but-<br>ton for $2-3$<br>seconds. | A2 is reset to 0.0. |

# **6** CONTROLS

#### 6.20.11 Riding time 1

- Press the + or button repeatedly until T1 is shown on the combination instrument.
- T1 shows riding time 1 since the last reset.

| Briefly press the button $+$ .                | Next display mode   |
|---|---------------------|
| Briefly press the button —.                   | Next display mode   |
| Press the but-<br>ton $=$ for 2–3<br>seconds. | T1 is reset to 0.0. |

#### 6.20.12 Riding time 2

Press the + or - button repeatedly until T2 is shown on the combination instrument.

**T2** shows riding time 2 since the last reset.

| Briefly press<br>the button +.                | Next display mode   |
|---|---------------------|
| Briefly press the button —.                   | Next display mode   |
| Press the but-<br>ton $=$ for 2–3<br>seconds. | T2 is reset to 0.0. |

#### 6.20.13 Service hour counter

Press the + or - button repeatedly until ART is shown on the combination instrument.

**ART** shows the motorcycle's operating hours.

#### 6.20.14 Clock

Press the + or - button repeatedly until CLK is shown on the combination instrument.

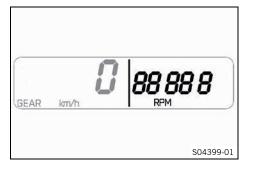

**CLK** shows the time.

#### 6.20.15 Service interval display

- Press the + or button repeatedly until SER is shown on the combination instrument.
- SER shows the remaining kilometers until the next service is due.

#### 6.20.16 Tachometer

Press the + or - button repeatedly until **RPM** is shown on the combination instrument.

Guideline

| Speed | per | symbol | approx. |
|-------|-----|--------|---------|
|-------|-----|--------|---------|

| 8      | 1,000 rpm |
|--------|-----------|
| 88     | 3,000 rpm |
| 888    | 4,000 rpm |
| 8888   | 5,000 rpm |
| 88888  | 7,000 rpm |
| 888888 | 9,000 rpm |

**RPM** shows the current engine speed.

#### Info

i

Before the first service, the tachometer always flashes with a slow frequency (5 Hz) when the engine speed reaches 6500 rpm.

The tachometer flashes with a slow frequency (5 Hz) in the following cases: The coolant temperature is lower than 35 °C and the engine speed has reached 6500 rpm, or the recommended shift speed of 8000 rpm has been reached.

The tachometer flashes with a fast frequency (10 Hz) when the maximum engine speed is reached.

#### 6.20.17 Odometer

Press the + or - button repeatedly until **0D0** is shown on the combination instrument.

**ODO** shows the motorcycle's total mileage.

# **6 CONTROLS**

#### 6.20.18 Gear display

#### The gear display shows the engaged gear.

#### Info

The gear display is at the left of the display.

#### 6.20.19 Service display

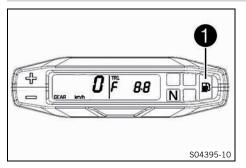

#### The service display is at the top left of the display.

#### Info

If the service display appears, a service is due. Contact an authorized KTM workshop.

#### 6.20.20 Distance fuel reserve

When the fuel level has reached the reserve mark, **TR1 F** appears on the display, and the fuel level warning lamp **1** lights up. This indicator can be closed by pressing the **+** or **-** button.

#### Info

•

This indicator shows the distance traveled since the beginning of the fuel reserve.

When the indicator is closed, the fuel level warning lamp remains lit.

#### Advice on preparing for first use

### Danger

**Danger of accidents** A rider who is not fit to ride poses a danger to him or herself and others.

- Do not operate the vehicle if you are not fit to ride due to alcohol, drugs or medication.
  - Do not operate the vehicle if you are physically or mentally impaired.

#### Warning

**Risk of injury** Missing or poor protective clothing presents an increased safety risk.

- Wear appropriate protective clothing such as helmet, boots, gloves as well as trousers and a jacket with protectors on all rides.
- Always wear protective clothing that is in good condition and meets the legal regulations.

#### Warning

**Danger of crashing** Different tire tread patterns on the front and rear wheel impair the handling characteristic.

Different tire tread patterns can make the vehicle significantly more difficult to control.

- Make sure that only tires with a similar tire tread pattern are fitted to the front and rear wheel.

#### Warning

**Danger of accidents** Non-approved or non-recommended tires and wheels impact the handling characteristic.

- Only use tires/wheels approved by KTM with the corresponding speed index.

# Warning

**Danger of accidents** New tires have reduced road grip. The contact surface on new tires is not yet roughened.

Run in new tires with moderate riding at alternating angles.
 Running-in phase
 200 km (124 mi)

# Warning

**Danger of accidents** The brake system fails in the event of overheating. If the foot brake lever is not released, the brake linings drag continuously.

- Take your foot off the foot brake lever if you do not want to brake.

## Info

When using your vehicle, remember that others may feel disturbed by excessive noise.

- Make sure that the pre-sales inspection work has been carried out by an authorized KTM workshop.
- ✓ You will receive a delivery certificate when the vehicle is handed over.
- Before riding for the first time, read the entire Owner's Manual carefully.
- Get to know the controls.
- Adjust basic position of the clutch lever. (E p. 59)

- Get used to handling the motorcycle in a suitable area before making a longer trip. Try also to ride as slowly
  as possible and in a standing position to get a better feel for the motorcycle.
- Hold the handlebar firmly with both hands and keep your feet on the footrests when riding.

– Run the engine in. (🕮 p. 28)

#### 7.2 Running in the engine

- During the run-in phase, do not exceed the specified vehicle speed in the respective gear.
  - Guideline

| During the first       | 1,000 km (620 mi)   |
|------------------------|---------------------|
| Maximum speed per gear |                     |
| First gear             | 50 km/h (31.1 mph)  |
| Second gear            | 70 km/h (43.5 mph)  |
| Third gear             | 90 km/h (55.9 mph)  |
| Fourth gear            | 110 km/h (68.4 mph) |
| Fifth gear             | 125 km/h (77.7 mph) |
| Sixth gear             | 140 km/h (87 mph)   |

Avoid fully opening the throttle!

#### 7.3 Loading the vehicle

# Warning

Danger of accidents Total weight and axle loads influence the handling characteristic.

The total weight consists of: motorcycle ready for operation and with a full tank, driver and passenger with protective clothing and helmet, and luggage.

- Do not exceed the maximum permissible overall weight or the axle loads.

#### Warning

**Danger of accidents** Improper mounting of cases or the tank rucksack impairs the handling characteristic.

- Mount and secure cases and tank rucksack according to the manufacturer's instructions.

#### Warning

**Danger of accidents** Carrying luggage alters handling characteristics at high speed.

- Adapt your speed to your payload.
- Ride more slowly if your motorcycle is loaded with cases or other luggage.
   Maximum speed with baggage 130 km/h (80.8 mph)

#### Warning

**Danger of accidents** The luggage system will be damaged if it is overloaded.

- Read the manufacturer information on maximum payload when mounting cases.

### Warning

Danger of accidents Luggage which has slipped impairs visibility.

If the tail light is covered, you are less visible to traffic behind you, especially when it is dark.

- Check that your luggage is fixed properly at regular intervals.

**Danger of accidents** A high payload alters the handling characteristic and increases the stopping distance.

- Adapt your speed to your payload.

### Warning

Danger of accidents Pieces of luggage which have slipped impair the handling characteristic.

- Check that your luggage is fixed properly at regular intervals.

### Warning

Fire hazard The hot exhaust system may burn luggage.

- Fasten your luggage in such a way that it cannot be burned or singed by the hot exhaust system.
- If you carry luggage, make sure you secure it firmly as close as possible to the center of the vehicle and ensure even weight distribution between the front and rear wheels.

 Do not exceed the maximum permissible weight and the maximum permissible axle loads. Guideline

| Maximum permissible overall weight  | 350 kg (772 lb.) |
|-------------------------------------|------------------|
| Maximum permissible front axle load | 150 kg (331 lb.) |
| Maximum permissible rear axle load  | 200 kg (441 lb.) |

#### 8.1 Checks and maintenance measures when preparing for use

#### • Info

Before every trip, check the condition of the vehicle and ensure that it is roadworthy. The vehicle must be in perfect technical condition when it is being operated.

- Check the engine oil level. (
  p. 97)
- Check the front brake fluid level. (🕮 p. 63)
- Check the rear brake fluid level. (🕮 p. 66)
- Check the front brake linings. (🕮 p. 65)
  - Check the rear brake linings. (🕮 p. 68)
- Check that the brake system is functioning properly.
- Check the coolant level. (
  p. 90)
- Check the chain tension. (I p. 55)
- Check the tire condition. (
   P. 74)
- Check tire pressure. (🕮 p. 76)
- Check the settings of all controls and ensure that they can be operated smoothly.
- Check that the electrical system is functioning properly.
- Check that luggage is properly secured.
- Sit on the motorcycle and check the rear mirror setting.
- Check the fuel level.

#### 8.2 Starting the vehicle

#### Danger

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use effective exhaust extraction when starting or running the engine in an enclosed space.

# Caution

**Danger of accidents** Electronic components and safety devices will be damaged if the 12-V battery is discharged or missing.

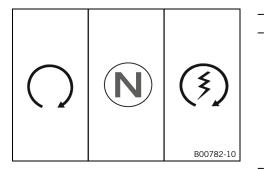

If the 12-V battery is discharged or defective, malfunctions in the vehicle electronics can occur, especially when starting.

- Never operate the vehicle with a discharged 12-V battery or without a 12-V battery.

#### Note

Engine damage High revving speed with a cold engine negatively impacts the lifespan of the engine.

- Always run the engine warm at a low speed.

- Turn the emergency OFF switch to the position  $\bigcirc$ .
- Switch on the ignition by turning the ignition key to the position  $\bigcirc.$ 
  - ✓ After you switch on the ignition, you can hear the fuel pump operating for about two seconds. The function check of the combination instrument is run at the same time.
  - The <u>ABS</u> warning lamp lights up and goes back out after starting off.
- Shift the transmission to neutral position.
  - ✓ Green idle indicator lamp **N** lights up.
- Press start button (3).

# • Info

Do not press the start button until the combination instrument function check has finished.
Do not open the throttle to start.
Press the starter for a maximum of 5 seconds. Wait for a least 5 seconds before trying again.
This motorcycle is equipped with a safety starting system. You can only start the engine if the transmission is in neutral or if the clutch lever is pulled when a gear is engaged. If the side stand is folded out and you shift into gear and release the clutch lever, the engine stops.

- Take the weight off the side stand and swing it back up with your foot as far as it will go.

#### 8.3 Starting off

 Pull the clutch lever, engage 1st gear, release the clutch lever slowly and simultaneously open the throttle carefully.

#### 8.4 Shifting, riding

#### Warning

Danger of accidents Abrupt load alterations can cause the vehicle to get out of control.

- Avoid abrupt load alterations and sudden braking actions.
- Adapt your speed to the road conditions.

#### Warning

**Danger of accidents** If you change down at high engine speed, the rear wheel blocks and the engine races.

- Do not change into a low gear at high engine speed.

#### Warning

Danger of accidents An incorrect ignition key position causes malfunctions.

- Do not change the ignition key position while driving.

# 8 **RIDING INSTRUCTIONS**

#### Warning

Danger of accidents Adjustments to the vehicle distract attention from traffic activity.

- Make all adjustments when the vehicle is at a standstill.

**Risk of injury** The passenger may fall from the motorcycle if they conduct themselves incorrectly.

- Ensure that the passenger sits correctly on the passenger seat, places his or her feet on the passenger foot pegs and holds on to the rider or the grab handles.
- Note the regulations governing the minimum age of passengers in your country.

#### Warning

Danger of accidents A risky riding style constitutes a major risk.

 Comply with traffic regulations and ride defensively and with foresight to detect sources of danger as early as possible.

### Warning

Danger of accidents Cold tires have reduced road grip.

 Ride the first miles carefully on every journey at moderate speed until the tires reach operating temperature.

#### Warning

**Danger of accidents** New tires have reduced road grip.

The contact surface on new tires is not yet roughened.

Run in new tires with moderate riding at alternating angles.
 Running-in phase 200 km (124 mi)

### Warning

**Danger of accidents** Total weight and axle loads influence the handling characteristic. The total weight consists of: motorcycle ready for operation and with a full tank, driver and passenger with protective clothing and helmet, and luggage.

- Do not exceed the maximum permissible overall weight or the axle loads.

#### Warning

**Danger of accidents** Pieces of luggage which have slipped impair the handling characteristic.

- Check that your luggage is fixed properly at regular intervals.

#### Warning

Danger of accidents A fall can damage the vehicle more seriously than it may first appear.

- Check the vehicle after a fall as you do when preparing for use.

#### Note

**Engine damage** Unfiltered intake air has a negative effect on the service life of the engine. Dust and dirt will enter the engine without an air filter.

- Only operate the vehicle if it is equipped with an air filter.

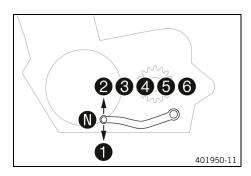

#### Note

**Engine failure** Overheating damages the engine.

- If the coolant temperature warning is displayed, stop immediately and take care not to endanger yourself or other traffic participants in the process.
- Allow the engine and cooling system to cool down.
- Check and, if necessary, correct the coolant level on the cooling system while it is in a cooled state.

#### Info

If unusual noises arise during operation, stop immediately, switch off the engine, park the vehicle properly, and contact an authorized KTM workshop.

- Shift into a higher gear when conditions allow (incline, road situation, etc.).
- Release the throttle while simultaneously pulling the clutch lever, shift into the next gear, release the clutch lever, and open the throttle.

#### Info

- The gear positions can be seen in the figure. The neutral or idle position is between the first and second gears. First gear is used for starting off or for steep inclines.
- After reaching maximum speed by fully opening the throttle grip, turn the throttle back so it is <sup>3</sup>/<sub>4</sub> open. This will barely reduce the speed, but fuel consumption will be considerably lower.
- Accelerate only up to a speed suitable for the road surface and weather conditions. Particularly in bends, do not shift, and accelerate very carefully.
- Brake if necessary and close the throttle at the same time in order to shift down.
- Pull clutch lever and shift into a lower gear, release the clutch lever slowly, and open the throttle or shift again.
- If the engine stalls (e.g. at an intersection), just pull the clutch lever and press the start button. The transmission must not be shifted into neutral.
- Switch off the engine if you are likely to be running at idle speed or stationary for a long time.
- Avoid frequent and lengthy slipping of the clutch. This causes the engine oil, engine and cooling system to heat up.
- Ride at a low engine speed instead of at a high engine speed with a slipping clutch.
- If the oil pressure warning lamp 
   <sup>⊕</sup> lights up, stop immediately, taking care not to endanger yourself or other road users in the process, and switch off the engine. Contact an authorized KTM workshop.
- If the malfunction indicator lamp lights up during a trip, please contact an authorized KTM workshop as soon as possible.
- <u>Quickshifter +</u> allows you to shift up in the speed range shown without pulling the clutch lever.

# 8 **RIDING INSTRUCTIONS**

#### Guideline

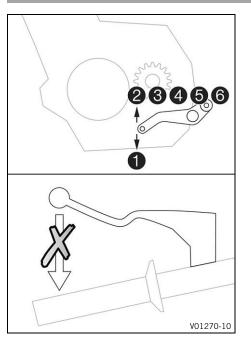

| Minimum speed before gear change |                    |  |
|----------------------------------|--------------------|--|
| First gear to second gear        | 30 km/h (18.6 mph) |  |
| Second gear to third gear        | 40 km/h (24.9 mph) |  |
| Third gear to fourth gear        | 50 km/h (31.1 mph) |  |
| Fourth gear to fifth gear        | 55 km/h (34.2 mph) |  |
| Fifth gear to sixth gear         | 60 km/h (37.3 mph) |  |

 Quickshifter + allows you to shift down in the speed range shown without pulling the clutch lever.

Guideline

| Maximum speed before gear change |                      |
|----------------------------------|----------------------|
| Sixth gear to fifth gear         | 165 km/h (102.5 mph) |
| Fifth gear to fourth gear        | 145 km/h (90.1 mph)  |
| Fourth gear to third gear        | 120 km/h (74.6 mph)  |
| Third gear to second gear        | 90 km/h (55.9 mph)   |
| Second gear to first gear        | 60 km/h (37.3 mph)   |

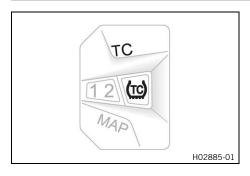

If the  $\underline{\text{quickshifter +}}$  is activated, you can shift up and down without actuating the clutch.

Because there is no need to close the throttle grip, uninterrupted gear shifts are possible.

The quickshifter + uses the shifter shaft position to check whether or not a shift should be initiated, and sends a corresponding signal to the engine control.

### 8.6 Motorcycle traction control

The motorcycle traction control (<u>cornering MTC</u>) lowers the engine torque in case of loss of traction in the rear wheel. Depending on the riding mode, different amounts of slip are allowed when the traction control is activated.

### Info

When motorcycle traction control is switched off, the rear wheel may spin during strong acceleration and on surfaces with low grip, resulting in a risk of crashing. After the ignition is switched on, motorcycle traction control is enabled again.

The motorcycle traction control **MTC** is switched on and off on the left combination switch using the **TC** button.

#### Info

When the motorcycle traction control is active, the TC indicator lamp I flashes. When motorcycle traction control is switched off, the TC indicator lamp I lights up.

### 8.7 Braking

#### Warning

Danger of accidents Moisture and dirt impair the brake system.

- Brake carefully several times to dry out and remove dirt from the brake linings and the brake discs.

## Warning

**Danger of accidents** A spongy pressure point on the front or rear brake reduces braking efficiency.

- Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

### Warning

Danger of accidents The brake system fails in the event of overheating.

- If the foot brake lever is not released, the brake linings drag continuously.
- Take your foot off the foot brake lever if you do not want to brake.

### Warning

**Danger of accidents** Higher total weight increases the stopping distance.

- Take the longer stopping distance into account when carrying a passenger or luggage with you.

- Warning
- **Danger of accidents** Salt on the roads impairs the brake system.
- Brake carefully several times to remove salt from the brake linings and the brake discs.

### Warning

**Danger of accidents** ABS may increase the stopping distance in certain situations.

- Adjust application of the brakes to the respective riding situation and riding surface conditions.

#### Warning

**Danger of accidents** Excessively forceful application of the brakes blocks the wheels.

The ABS effectiveness is only ensured if it is switched on.

- Leave the ABS switched on in order to benefit from the protective effect.

### Warning

Danger of accidents The rear wheel can lock due to the engine braking effect.

- Pull in the clutch, if you perform emergency or full braking, or if you brake on a slippery ground.
- To brake release the throttle and apply the front and rear brakes at the same time.

### Info

When the <u>ABS</u> is enabled, you can achieve maximum braking power even on low grip surfaces such as sandy, wet, or slippery terrain without the danger of the wheels locking.

### Warning

**Danger of accidents** Banked or laterally sloping ground reduces the maximum possible delay.If possible finish braking before going into a bend.

- Always finish braking before you go into a bend. Change down to a lower gear appropriate to your road speed.
- Use the braking effect of the engine on long downhill stretches. Change down one or two gears, but do not
  over-rev the engine. You will have to apply the brakes far less frequently as a result and the brake system will
  not overheat.

### 8.8 Stopping, parking

| / |  |
|---|--|
|   |  |

### Warning

Risk of injury People who act without authorization endanger themselves and others.

- Do not leave the vehicle unattended if the engine is running.
- Protect the vehicle against access by unauthorized persons.
- Lock the steering and remove the ignition key if you leave the vehicle unattended.

### Warning

**Danger of burns** Some vehicle components become very hot when the vehicle is operated.

- Do not touch any parts such as the exhaust system, radiator, engine, shock absorber, or brake system before the vehicle parts have cooled down.
- Let the vehicle parts cool down before you perform any work on the vehicle.

### Note

Material damage The vehicle may be damaged by incorrect procedure when parking.

Significant damage may be caused if the vehicle rolls away or falls over.

- The components for parking the vehicle are designed only for the weight of the vehicle.
- Park the vehicle on a firm and level surface.
- Ensure that nobody sits on the vehicle when the vehicle is parked on a stand.

### Note

Fire hazard Hot vehicle components pose a fire hazard and explosion risk.

- Do not park the vehicle near to materials which are highly flammable or explosive.
- Allow the vehicle to cool down before covering it.

- Apply the brakes on the motorcycle. \_
- Shift the transmission to neutral position.
- Switch off the ignition by turning the ignition key to the position  $\otimes$ .

### Info L

•

If the engine is switched off with the emergency OFF switch and the ignition remains switched on at the ignition lock, power continues to flow to most power consumers. This discharges the 12-V battery. You should therefore always switch off the engine with the ignition lock - the emergency OFF switch is intended for emergencies only.

- Park the motorcycle on a firm surface.
- Swing side stand forward with your foot as far as it will go and lean the vehicle on it.
- Lock the steering by turning the handlebar fully to the left, pressing down the ignition key to the position  $\bigotimes$ and turning it to the position f. To make the steering lock engage more easily, move the handlebar a little to the left and right. Remove the ignition key.

#### 8.9 Transport

### Note

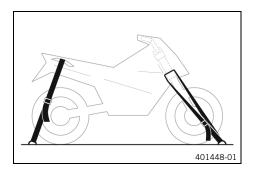

Danger of damage The parked vehicle can roll away or fall over.

Park the vehicle on a firm and level surface.

### Note

Fire hazard Hot vehicle components pose a fire hazard and explosion risk.

- Do not park the vehicle near to materials which are highly flammable or explosive.
- Allow the vehicle to cool down before covering it.

- Switch off the engine and remove the ignition key.
- Use tension belts or other suitable devices to secure the motorcycle against accidents or falling over.

#### 8.10 Refueling

### Danger

**Fire hazard** Fuel is highly flammable.

The fuel in the fuel tank expands when warm and can escape if overfilled.

- Do not fuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

### Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.

### Note

Material damage Inadequate fuel quality causes the fuel filter to quickly become clogged.

In some countries and regions, the available fuel quality and cleanliness may not be sufficient. This will result in problems with the fuel system.

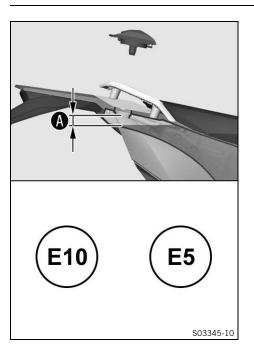

Refuel only with clean fuel that meets the specified standards. (Your authorized KTM workshop will be glad to \_ help.)

Environmental hazard Improper handling of fuel is a danger to the environment.

- Do not allow fuel to enter the groundwater, the soil, or the sewage system.

\_

- Switch off the engine.
- Open the fuel tank filler cap. (
  p. 19)
- Fill the fuel tank with fuel up to level A. \_ Guideline

| Dimension A                 | 20 mm                   | (0.79 in)                               |
|-----------------------------|-------------------------|---|
| Fuel tank capacity, approx. | 13.3  <br>(3.51 US gal) | Super unleaded<br>(ROZ 95)<br>( p. 119) |

Close the fuel tank filler cap. (IP p. 20)

### 9.1 Additional information

Any further work that results from the compulsory work or from the recommended work must be ordered separately and invoiced separately.

Different service intervals may apply in your country, depending on the local operating conditions. Individual service intervals and scopes may change in the course of technical developments. The most up-to-date service schedule can always be found on KTM Dealer.net. Your authorized KTM dealer will be happy to advise you.

### 10.1 Fork/shock absorber

The fork and the shock absorber offer many options for adapting the chassis to the riding style and the payload.

#### Info

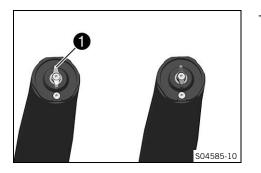

The recommendations for the suspension setting are shown in table **1**. The table is located on the underside of the front rider's seat.

These adjustments should be understood as a guideline and should always be the basis for one's own personal suspension setting. Do not change the adjustments at random, as otherwise the riding characteristics could deteriorate, particularly at high speeds.

### 10.2 Adjusting the compression damping of the fork

### Info

The hydraulic compression damping determines the fork suspension behavior.

Turn white adjusting screw 1 clockwise as far as it will go.

#### Info

Adjusting screw **1** is located at the upper end of the left fork leg.

The compression damping is located in left fork leg **COMP** (white adjusting screw). The rebound damping is located in right fork leg **REB** (red adjusting screw).

Turn counterclockwise by the number of clicks corresponding to the fork type.

### Guideline

| Compression damping |           |  |
|---------------------|-----------|--|
| Comfort             | 20 clicks |  |
| Standard            | 15 clicks |  |
| Sport               | 10 clicks |  |
| Full payload        | 10 clicks |  |

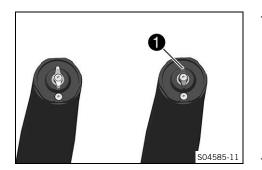

#### Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping during compression.

### 10.3 Adjusting the rebound damping of the fork

### • Info

The hydraulic rebound damping determines the fork suspension behavior.

• Turn red adjusting screw 🕦 clockwise as far as it will go.

### Info

Adjusting screw **1** is located at the upper end of the right fork leg.

The rebound damping is located in right fork leg **REB** (red adjusting screw). The compression damping is located in left fork leg **COMP** (white adjusting screw).

- Turn counterclockwise by the number of clicks corresponding to the fork type.

## Guideline

| Rebound damping |           |  |
|-----------------|-----------|--|
| Comfort         | 20 clicks |  |
| Standard        | 15 clicks |  |
| Sport           | 10 clicks |  |
| Full payload    | 10 clicks |  |

### Info

Turn clockwise to increase the damping; turn counterclockwise to reduce damping when the shock absorber rebounds.

### 10.4 Compression damping of the shock absorber

The compression damping of the shock absorber is divided into two ranges: high-speed and low-speed. High-speed and low-speed refer to the compression speed of the rear wheel suspension and not to the vehicle speed.

The high-speed compression adjuster, for example, has an effect when riding over an asphalt edge: the rear wheel suspension compresses quickly.

The low-speed compression adjuster has an effect, for example, when riding over long ground swells: the rear wheel suspension compresses slowly.

These two ranges can be adjusted separately, although the transition between high-speed and low-speed is gradual. Thus, modifications in the high-speed range affect the compression damping in the low-speed range and vice versa.

### 10.5 Adjusting the low-speed compression damping of the shock absorber

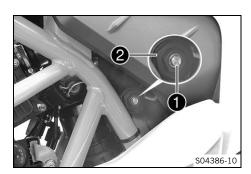

### Caution

**Risk of injury** Parts of the shock absorber will move around if the shock absorber is detached incorrectly. The shock absorber is filled with highly compressed nitrogen.

- Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

### Info

The effect of the low-speed compression adjuster can be seen in slow to normal compression of the shock absorber.

 Turn adjusting screw ① clockwise with a screwdriver as far as the last perceptible click.

Turn counterclockwise by the number of clicks corresponding to the shock absorber type.

Guideline

| Low-speed compression damping |           |  |
|-------------------------------|-----------|--|
| Comfort 20 clicks             |           |  |
| Standard                      | 15 clicks |  |
| Sport                         | 10 clicks |  |
| Full payload                  | 10 clicks |  |

### Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

### 10.6 Adjusting the high-speed compression damping of the shock absorber

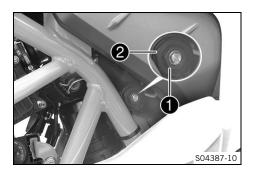

### Caution

**Risk of injury** Parts of the shock absorber will move around if the shock absorber is detached incorrectly. The shock absorber is filled with highly compressed nitrogen.

- Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

## Info

The effect of the high-speed compression adjuster can be seen in fast compression of the shock absorber.

- Turn adjusting screw 1 all the way clockwise with a socket wrench.

- Turn counterclockwise by the number of turns corresponding to the shock absorber type.

### Guideline

| High-speed compression damping |           |  |
|--------------------------------|-----------|--|
| Comfort 2 turns                |           |  |
| Standard                       | 1.5 turns |  |
| Sport                          | 1 turn    |  |
| Full payload                   | 1 turn    |  |

Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

### 10.7 Adjusting the rebound damping of the shock absorber

### Caution

**Risk of injury** Parts of the shock absorber will move around if the shock absorber is detached incorrectly. The shock absorber is filled with highly compressed nitrogen.

- Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

- Turn adjusting screw 1 clockwise up to the last perceptible click.
- Turn counterclockwise by the number of clicks corresponding to the shock absorber type.

Guideline

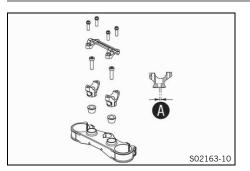

| Rebound damping |           |  |
|-----------------|-----------|--|
| Comfort         | 20 clicks |  |
| Standard        | 15 clicks |  |
| Sport           | 10 clicks |  |
| Full payload    | 10 clicks |  |

Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

4

### 10.8 Handlebar position

The holes on the handlebar support are placed at a distance of  $\mathbf{A}$  from the center.

| Hole distance A | 3.5 mm (0.138 in) |
|-----------------|-------------------|
|-----------------|-------------------|

The handlebar can be mounted in 2 different positions. This allows the handlebar to be mounted in the most comfortable position for the rider.

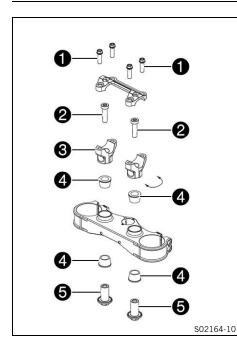

### 10.9 Adjusting the handlebar position 🔦

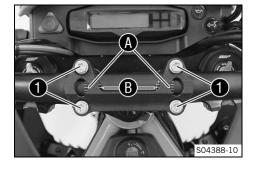

# Warning

Danger of accidents A repaired handlebar poses a safety risk.

If the handlebar is bent or straightened, the material becomes fatigued. The handlebar may break as a result.

- Change the handlebar if the handlebar is damaged or bent.

Remove screws ①. Take off the handlebar clamp. Remove the handlebar and lay it to one side.

### Info

- Cover the components to protect them against damage. Do not kink the cables and lines.
- Remove screws 2. Remove handlebar support 3.
- Position rubber bushings ④ and push through nuts ⑤ from below.
  - Place the handlebar support in the required position.

### Info

- The handlebar supports are longer and higher on one side. Position the left and right handlebar supports evenly.
- Mount and tighten screws 2.
   Guideline

| dulucinic      |     |                     |
|----------------|-----|---------------------|
| Screw, handle- | M10 | 45 Nm (33.2 lbf ft) |
| bar support    |     | Loctite®243™        |

- Position the handlebar.

# • Info

Make sure the cables and wiring are positioned correctly.

- Position the handlebar clamp.
- Mount screws 1, but do not tighten yet.
  - ✓ Handlebar clamp marking A is aligned with centre line B of the handlebar scale.
- First bolt the handlebar clamp with screws ① onto the longer, higher side of the handlebar supports so that both parts touch.
- Tighten screws **1** evenly.

### Guideline

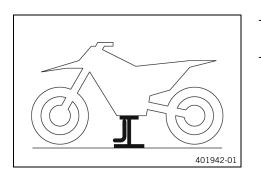

| Screw, handlebar | M8 | 20 Nm (14.8 lbf ft) |
|------------------|----|---------------------|
| clamp            |    |                     |

### 11.1 Raising the motorcycle with a lift stand

### Note

Danger of damage The parked vehicle can roll away or fall over.

- Park the vehicle on a firm and level surface.

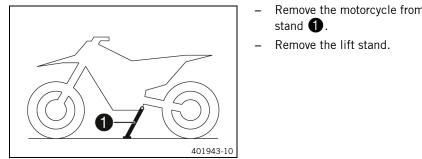

- Raise the motorcycle in the area of the footrest bracket.✓ Neither wheel is in contact with the ground.
- Secure the motorcycle against falling over.

### 11.2 Removing the motorcycle from the lift stand

### Note

Danger of damage The parked vehicle can roll away or fall over.

- Park the vehicle on a firm and level surface.

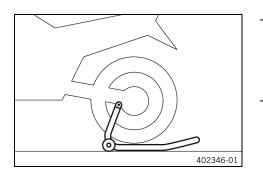

Remove the motorcycle from the lift stand and rest it on side stand

### 11.3 Raising the motorcycle with rear lifting gear

### Note

Danger of damage The parked vehicle can roll away or fall over.

- Park the vehicle on a firm and level surface.

Insert the adapter in the rear of the lifting gear and screw into the link fork on both sides.

| Retaining adapter (69329955010)     |
|-------------------------------------|
| Rear wheel work stand (69329955000) |

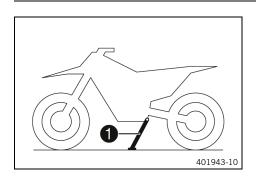

- Position the motorcycle vertically, align the lifting gear, and raise the motorcycle.

### 11.4 Removing the rear of the motorcycle from the wheel stand

### Note

Danger of damage The parked vehicle can roll away or fall over.

- Park the vehicle on a firm and level surface.

- Secure the motorcycle against falling over.
- Remove the rear wheel stand and lean the vehicle on side stand ①.

11.5 Lifting the motorcycle with the front lifting gear

### Note

Danger of damage The parked vehicle can roll away or fall over.

Park the vehicle on a firm and level surface.

### Preparatory work

- Raise the motorcycle with the rear lifting gear. (IP p. 46)

#### Main work

Move the handlebar to the straight-ahead position. Align the lifting gear at the front with the adapters to the fork legs.
 Front wheel work stand, small (61129965000)

Always raise the motorcycle at the rear first.

- Lift the motorcycle at the front.

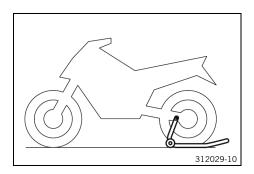

### 11.6 Taking the motorcycle off the front lifting gear

402344-01

### Note

Danger of damage The parked vehicle can roll away or fall over.

– Park the vehicle on a firm and level surface.

- Secure the motorcycle against falling over.
  - Remove the front lifting gear.

1

### 11.7 Cleaning the dust boots of the fork legs

### Preparatory work

- Raise the motorcycle with a lift stand. (IP p. 46)
- Remove fork protector. (🕮 p. 48)

### Main work

• Push dust boots 1 of both fork legs downward.

### • Info

The dust boots remove dust and coarse dirt particles from the inside fork tubes. Over time, dirt can accumulate behind the dust boots. If this dirt is not removed, the oil seals behind can start to leak.

L00350-10

### Warning

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.
- Clean and oil the dust boots and inner fork tubes of both fork legs.

Universal oil spray (🕮 p. 120)

- Press the dust boots back into the installation position.
- Remove the excess oil.

#### **Finishing work**

- Install the fork protector. (🕮 p. 49)
- Remove the motorcycle from the lift stand. (IP p. 46)

### 11.8 Removing fork protector

- Remove screws **1** and take off the clamp.
  - Remove screws ② on the left fork leg. Take off the fork protector.
- Remove screws **2** on the right fork leg. Take off the fork protector.

### 11.9 Installing the fork protector Position the left fork protector. Mount and tighten screws 1. Guideline 10 Nm (7.4 lbf ft) Remaining screws, Μ6 chassis Position brake line, wiring harness, and clamp. Mount and tighten screws **2**. Position the right fork protector. Mount and tighten screws 1. S03276-11 Guideline Remaining screws, Μ6 10 Nm (7.4 lbf ft) chassis 11.10 Bleeding the fork legs **Preparatory work** Raise the motorcycle with a lift stand. (IP p. 46) \_ Main work Release bleeder screws **1**. ✓ Any excess pressure escapes from the interior of the fork. Tighten the bleeder screws. \_ Info • Carry out this operation on both fork legs. . S04585-12 **Finishing work** Remove the motorcycle from the lift stand. (E) p. 46) 11.11 Removing the seat Preparatory work Open the fuel tank filler cap. (IP) p. 19) \_ Main work Pull on loop 1 and raise the rear of the seat. \_ Pull the seat back and lift it off.

#### **Finishing work**

S04383-10

- Close the fuel tank filler cap. (🕮 p. 20)

49

11.12 Mounting the seat

- Hook the seat using holding lugs 1 on to bushings 2, lower the seat at the rear and push it forward.
- Push locking pin ③ into lock housing ④ and push the back of the seat down until the locking pin locks in place with an audible click.
- Check that the seat is correctly mounted.

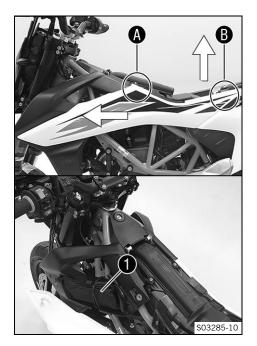

### 11.13 Removing the tool set

#### **Preparatory work**

- Open the fuel tank filler cap. (IP p. 19)
- Remove the seat. (💷 p. 49)

#### Main work

- Remove the left side cover from the rubber bushing in area  $(\mathbf{A})$ .
- Remove the left side cover upwards from the bushing in area **B**.
- Take off the left side cover from the front.
- Open the tool set compartment and take out tool set 1.

### 11.14 Storing the tool set

#### **Preparatory work**

- Open the fuel tank filler cap. (
   p. 19)

### Main work

- Store the tool set in the tool set compartment.
- Position the left side cover using holding lugs ① on bushings
   ② and push towards the rear and, in the rear section, downward.
- Press the side cover into rubber bushing **3** in area **A**.

**Finishing work** - Mount the seat. (
p. 50)

### 11.15 Take off the side cover

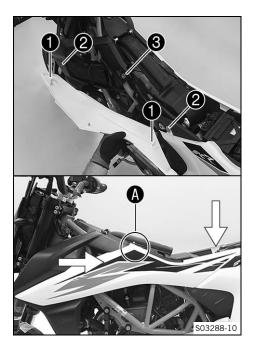

### Preparatory work

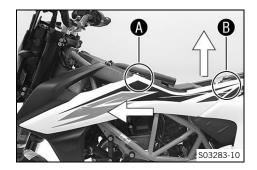

- Open the fuel tank filler cap. (
  p. 19)
- Remove the seat. (🕮 p. 49)

### Main work

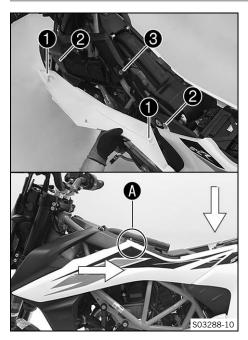

\_

- Remove the left side cover from the rubber bushing in area
   A.
- Remove the left side cover upwards from the bushing in area **B**.
- Take off the left side cover from the front.
  - Repeat these steps on the opposite side.

### 11.16 Mounting side cover

#### Main work

\_

- Position the left side cover using holding lugs ① on bushings
  2 and push towards the rear and, in the rear section, downward.
- Press the left side cover into the rubber bushing 3 in area A.
- Repeat these steps on the opposite side.

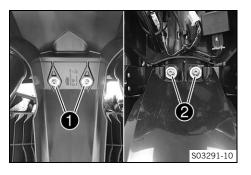

### Finishing work

– Mount the seat. (📖 p. 50)

### 11.17 Removing the front fender

### **Preparatory work**

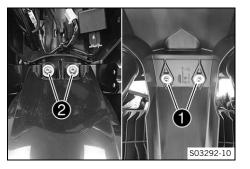

- Remove the headlight mask with the headlight. (I p. 84)

# Main work

- Remove screws 1.
- Remove screws **2** and take off the fender.

11.18 Installing the front fender

#### Main work

Position the front fender. Mount and tighten screws ①.
 Guideline

| Remaining screws, chassis            | M6    | 10 Nm (7.4 lbf ft) |
|--------------------------------------|-------|--------------------|
| Mount and tighten screv<br>Guideline | vs 🛛. |                    |
| Remaining screws, chassis            | M6    | 10 Nm (7.4 lbf ft) |

### **Finishing work**

- Install the headlight mask with the headlight. (
  p. 84)
- Check the headlight setting. (🕮 p. 86)

### 11.19 Removing the air filter 🔌

67

### Preparatory work

- Open the fuel tank filler cap. (IP p. 19)
- Remove the seat. (💷 p. 49)

#### Main work

- Remove screws 1.
- Remove the upper part of the air filter box 2.

### Note

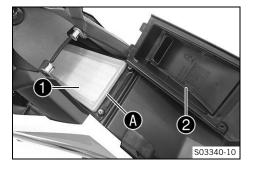

S03338-10

**Engine damage** Unfiltered intake air has a negative effect on the service life of the engine.

Dust and dirt will enter the engine without an air filter.

- Only operate the vehicle if it is equipped with an air filter.
- Remove air filter 🕄.

### 11.20 Installing the air filter 🔌

#### Main work

- Clean the air filter box.
- Mount air filter 🚺.

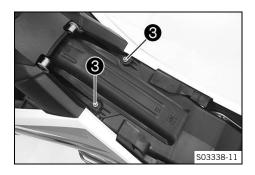

### Info

The air filter must lie flush against the air filter box along the entire sealing surface **A**. If the air filter is not mounted correctly, dust and dirt may enter the engine and result in damage.

- Hook air filter box top **2** into the front of the air filter box and swing down.
- Mount and tighten screws 3.

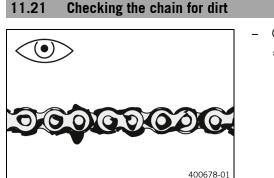

### Guideline

| Screw, upper part of | M6 | 2 Nm (1.5 lbf ft) |
|----------------------|----|-------------------|
| the air filter box   |    |                   |

### Finishing work

- Mount the seat. (🕮 p. 50)

- Check the chain for heavy soiling.
- » If the chain is very dirty:
   Clean the chain. (
   p. 54)

### 11.22 Cleaning the chain

### Warning

**Danger of accidents** Lubricants on the tires reduces the road grip.

- Remove lubricants from the tires using a suitable cleaning agent.

### Warning

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

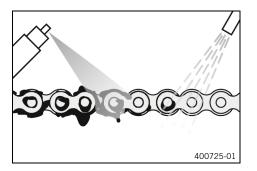

## Note

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

### • Info

The service life of the chain depends largely on its maintenance.

### Preparatory work

– Raise the motorcycle with the rear lifting gear. (IP p. 46)

### Main work

- Rinse off loose dirt with a soft jet of water.
- Remove old grease residue with chain cleaner.

Chain cleaner (📖 p. 120)

After drying, apply chain spray.

Street chain spray (🕮 p. 120)

### **Finishing work**

Remove the rear of the motorcycle from the wheel stand.
 (I) p. 47)

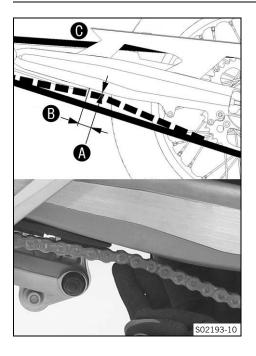

### 11.23 Checking the chain tension

### Warning

Danger of accidents Incorrect chain tension damages components and results in accidents.

If the chain is tensioned too much, the chain, engine sprocket, rear sprocket, transmission and rear wheel bearings wear more quickly. Some components may break if overloaded. If the chain is too loose, the chain may fall off the engine sprocket or the rear sprocket. As a result, the rear wheel locks or the engine will be damaged.

- Check the chain tension regularly.
- Set the chain tension in accordance with the specification.

Raise the motorcycle with the rear lifting gear. (I p. 46)

### Info

The check is also possible when the motorcycle is resting on the side stand.

- Shift the transmission to neutral position.
- Push the chain upward at a distance  $\mathbf{B}$  from the chain sliding guard and determine chain tension  $\mathbf{A}$ .

### Info

The top part of chain **()** must be taut. Chain wear is not always even. Repeat this measurement at different chain positions.

| Chain tension                   | 5 mm (0.2 in)   |
|---------------------------------|-----------------|
| Distance to chain sliding guard | 30 mm (1.18 in) |

» If the chain tension does not meet the specification:
 – Adjust the chain tension. (
 p. 55)

Remove the rear of the motorcycle from the wheel stand. (  $(\ensuremath{\mathbb{E}})$  p. 47)

### 11.24 Adjusting the chain tension

### Warning

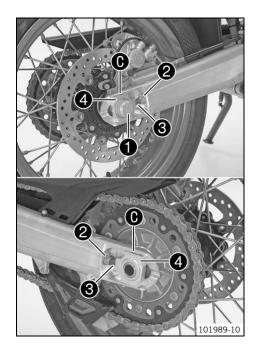

Danger of accidents Incorrect chain tension damages components and results in accidents.

If the chain is tensioned too much, the chain, engine sprocket, rear sprocket, transmission and rear wheel bearings wear more quickly. Some components may break if overloaded. If the chain is too loose, the chain may fall off the engine sprocket or the rear sprocket. As a result, the

rear wheel locks or the engine will be damaged.

- Check the chain tension regularly.
- Set the chain tension in accordance with the specification.

#### Preparatory work

#### Main work

#### - Loosen nut 1.

- Loosen nuts **2**.
- Adjust the chain tension by turning adjusting screws ③ left and right.

#### Guideline

| Turn the adjusting screws 3 on the left ar  |                  |
|---|------------------|
| the markings on the left and right chain ad<br>the same position relative to the reference<br>rear wheel is then correctly aligned. | justers 4 are in |

### • Info

- The top chain section must be taut. Chain wear is not always even. Repeat this measurement at different chain positions.
- Tighten nuts 2.
- Make sure that chain adjusters **4** are fitted correctly on adjusting screws **3**.
- Tighten nut 🚺.

Guideline

| Nut, rear wheel spin- | M25x1.5 | 90 Nm (66.4 lbf ft) |
|-----------------------|---------|---------------------|
| dle                   |         |                     |
|                       |         |                     |

### 11.25 Checking the chain, rear sprocket, engine sprocket, and chain guide

100132-10

#### Preparatory work

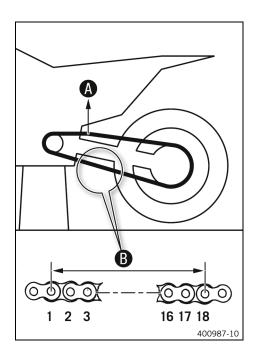

- Raise the motorcycle with the rear lifting gear. (
Resp. 46)

- Shift the transmission into neutral.
  - Check the chain, rear sprocket, and engine sprocket for wear.
    - » If the chain, rear sprocket or engine sprocket is worn:
      - Change the drivetrain kit. 🔌

# • Info

The engine sprocket, rear sprocket, and chain should always be replaced together.

Pull on the top section of the chain with the specified weight A.

### Guideline

| Weight of chain wear mea- | 15 kg (33 lb.) |
|---------------------------|----------------|
| surement                  |                |

### Info

Chain wear is not always even, so you should repeat this measurement at different chain positions.

Maximum distance **B** from 272 mm (10.71 in) 18 chain rollers at the longest chain section

- » If distance **B** is greater than the specified measurement:
  - Change the drivetrain kit. 🔌

### Info

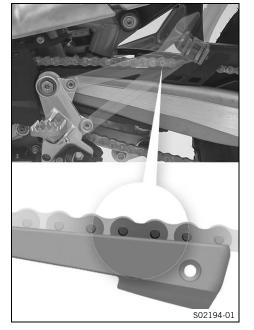

When a new chain is mounted, the rear sprocket and engine sprocket should also be changed. New chains wear out faster on an old, worn rear sprocket or engine sprocket.

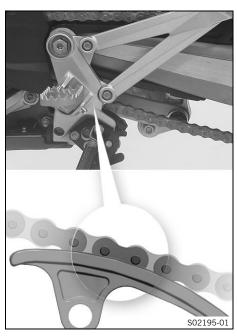

- Check the chain sliding guard for wear.
  - » If the lower edge of the chain pins is in line with, or below, the chain sliding guard:
    - Replace the chain sliding guard. 🔌
  - Check that the chain sliding guard is firmly seated.
  - » If the chain sliding guard is loose:

\_

Tighten screws on the chain sliding guard.
 Guideline

| Screw, chain  | M6 | 10 Nm (7.4 lbf ft)        |
|---------------|----|---------------------------|
| sliding guard |    | Loctite <sup>®</sup> 243™ |

- Check the chain sliding piece for wear.
  - » If the lower edge of the chain pins is in line with or below the chain sliding piece:
    - Change the chain sliding piece.
- Check that the chain sliding piece is firmly seated.
  - » If the chain sliding piece is loose:

\_

Tighten screw on the chain sliding piece.
 Guideline

| Screw, chain slid- | M8 | 15 Nm         |
|--------------------|----|---------------|
| ing piece          |    | (11.1 lbf ft) |

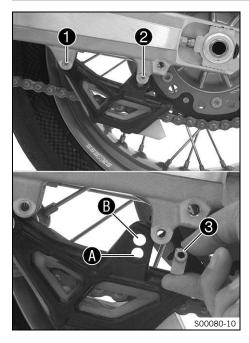

- Check the chain guide for wear.
  - Info Wear ca
    - Wear can be seen on the front of the chain guide.
  - If the light part of the chain guide is worn:
    - Change the chain guide. 🔌
- Check that the chain guide is firmly seated.
  - » If the chain guide is loose:
    - Tighten the screws on the chain guide.
       Guideline

| Remaining screws, | M6 | 10 Nm        |
|-------------------|----|--------------|
| chassis           |    | (7.4 lbf ft) |

### **Finishing work**

Remove the rear of the motorcycle from the wheel stand. (1 p. 47)

### 11.26 Adjusting chain guide 🔧

- Remove screws **1** and **2**. Take off the chain guide.

#### Condition

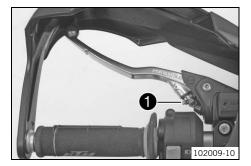

- Number of teeth:  $\leq$  44 teeth
  - Insert nut 3 in hole A. Position the chain guide.
  - Mount and tighten screws ① and ②.
     Guideline

| Screw, chain guide | M6 | 10 Nm (7.4 lbf ft) |
|--------------------|----|--------------------|
|--------------------|----|--------------------|

### Condition

- Number of teeth:  $\geq$  45 teeth
- Insert nut (3) in hole (B). Position the chain guide.
- Mount and tighten screws 1 and 2.
   Guideline
   Screw, chain guide M6 10 Nm (7.4 lbf ft)

### 11.27 Adjusting the basic position of the clutch lever

# Adjust basic position of the clutch lever to your hand size by turning adjusting screw **1**.

#### Info

\_

- Do not make any adjustments while riding. Push the clutch lever forward and turn the adjusting wheel. The range of adjustment is limited. Only turn the adjusting screw by hand, and do not use force.
- When adjusting the clutch lever, make sure to leave a minimum clearance to other parts of the vehicle.
   Guideline

ulucinic

Minimum clearance 5 mm (0.2 in)

### 11.28 Checking/correcting the fluid level of hydraulic clutch

### Warning

Skin irritation Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

### lnfo

The fluid level rises with increasing wear of the clutch facing discs.

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and clutch lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint. Only use clean brake fluid from a sealed container.

\_

- Move the clutch fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws ①.
  - Take off cover **2** with membrane **3**.
  - Check the fluid level.

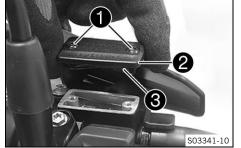

| Fluid level below container | 4 mm (0.16 in) |
|-----------------------------|----------------|
| rim                         |                |

- » If the fluid level does not meet specifications:
  - Correct the fluid level of the hydraulic clutch.
     Brake fluid DOT 4 / DOT 5.1 (
     p. 118)
- Position the cover with the membrane. Mount and tighten the screws.

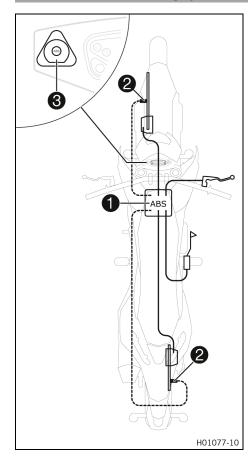

Clean up the overflowed or spilled brake fluid immediately with water.

.

#### 12.1 Anti-lock braking system (ABS)

The ABS module 1, consisting of a hydraulic unit, an ABS control unit, and a return pump, is located under the seat. One wheel speed sensor **2** is located in each case on the front and the rear wheel.

### Warning

**Danger of accidents** Changes to the vehicle impair the function of the ABS.

- Do not make any changes to the suspension travel.
- Only use spare parts on the brake system which have been approved and recommended by KTM.
- Only use tires/wheels approved by KTM with the corresponding speed index.
- Maintain the specified tire pressure.
- Ensure that service work and repairs are performed professionally. (Your authorized KTM workshop will be glad to help.)

ABS is a safety system that prevents locking of the wheels when driving straight ahead without the influence of lateral forces.

## Warning

Danger of accidents Driving aids can reduce the probability of a fall only within physical limits.

It is not always possible to compensate for extreme riding situations, for example with luggage loaded with a high center of gravity, varying road surfaces, steep descents or full braking without disengaging the gear.

Adapt your riding style to the road conditions and your driving ability.

### Warning

**Danger of accidents** An incorrectly selected ABS mode makes control of the vehicle considerably more difficult. The ABS modes are each only suitable for certain conditions.

Always select an ABS mode that is compatible with the surface of the ground.

ABS has two operating modes: the Road and Supermoto ABS modes.

In the Road ABS mode, the ABS controls both wheels. In ABS mode **Supermoto**, the ABS only controls the front wheel. There is no ABS control on the rear wheel. The ABS warning lamp ③ flashes slowly to remind you that the Supermoto ABS mode is enabled.

Info

In the **Supermoto** ABS mode, the rear wheel may lock and there is a risk of falling.

The **Supermoto** ABS mode is only available in riding mode **SPORT**.

The ABS operates with two independent brake circuits (front and rear brakes). When the ABS control unit detects a locking tendency in a wheel, ABS begins regulating the brake pressure. The control function causes a slight pulsing of the hand and foot brake levers.

The ABS warning lamp ③ must light up after the ignition is switched on and go out after starting off. If it does not go out after starting off or if it lights up while riding, this indicates a malfunction in the ABS. In this case, the ABS is no longer enabled and the wheels may lock during braking. The brake system itself stays functional; only ABS control is not available.

The ABS warning lamp may also light up if the rotating speeds of the front and rear wheels differ greatly under extreme riding conditions, for example when making "wheelies" or if the rear wheel spins. This causes the ABS to switch off.

To reactivate the ABS, the vehicle must be stopped and the ignition switched off. The ABS is reactivated when the vehicle is switched on again. The ABS warning lamp goes out when you start off.

### Info

The motorcycle has an additional 5-D sensor. The 5-D sensor makes the ABS control dependent on the angle of inclination and pitch. This can prevent locking and slipping of the wheels during braking when the vehicle is inclined (riding in curves) within the physical possibilities.

### 12.2 Adjusting the basic position of the hand brake lever

 Adjust the basic position of the hand brake lever to your hand size by turning adjusting wheel 1.

#### • Info

- Do not make any adjustments while riding.
   Push the hand brake lever forward and turn the adjusting wheel.
   The range of adjustment is limited.
   Only turn the adjusting screw by hand, and do not use force.
- When adjusting the brake lever, maintain a minimum clearance to other parts of the vehicle.

### Guideline

| Minimum clearance | 5 mm (0.2 in) |
|-------------------|---------------|
|-------------------|---------------|

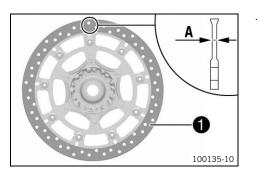

### 12.3 Checking the brake discs

### Warning

Danger of accidents Worn-out brake discs reduce the braking effect.

- Make sure that worn-out brake discs are replaced immediately. (Your authorized KTM workshop will be glad to help.)

Check the front and rear brake disc thickness at multiple points for the dimension  $\mathbf{A}$ .

Info

Wear will reduce the thickness of the brake disc at contact surface 1 of the brake linings.

| Brake discs - wear limit |                   |
|--------------------------|-------------------|
| front                    | 4.0 mm (0.157 in) |
| rear                     | 4.5 mm (0.177 in) |

- If the brake disc thickness is less than the specified value.
   Change the brake disc.
- Check the front and rear brake discs for damage, cracking, and deformation.
- » If the brake disc exhibits damage, cracking, or deformation:
  - Change the brake disc.

•

### 12.4 Checking the front brake fluid level

## Wa

Warning

**Danger of accidents** An insufficient brake fluid level will cause the brake system to fail. If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

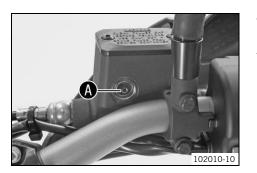

- Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

### Warning

Danger of accidents Old brake fluid reduces the braking effect.

 Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Check the brake fluid level in the level viewer.
  - If the brake fluid level has dropped below the marking A: - Add the front brake fluid. ◄ ( p. 64)

### 12.5 Adding the front brake fluid 🔧

### **Danger of accidents** An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

#### Warning

Skin irritation Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

#### Warning

Danger of accidents Old brake fluid reduces the braking effect.

 Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

### Note

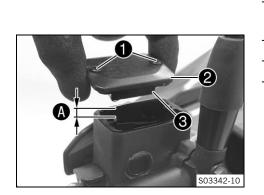

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

### Info

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint. Only use clean brake fluid from a sealed container.

#### Preparatory work

Check the front brake linings. (
 p. 65)

#### Main work

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws 1.
- Take off cover 2 with membrane 🕄 .
- Add brake fluid to level **A**. Guideline

aulueillie

| Level 🚯 (brake fluid level below reservoir rim) | 5 mm (0.2 in) |  |
|---|---------------|--|
|   |               |  |
| Brake fluid DOT 4 / DOT 5.1 (🕮 p. 118)          |               |  |

Position the cover with the membrane. Mount and tighten the screws.

### Info

Clean up the overflowed or spilled brake fluid immediately with water.

### 12.6 Checking the front brake linings

Warning

- Danger of accidents Worn-out brake linings reduce the braking effect.
  Ensure that worn-out brake linings are replaced immediately. (Your authorized KTM workshop will be
  - glad to help.)

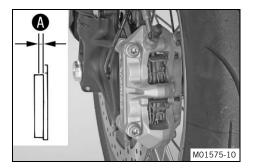

### Warning

**Danger of accidents** Damaged brake discs reduce the braking effect.

If the brake linings are not changed in time, the brake lining carriers grind against the brake disc. As a consequence, the braking effect is greatly reduced and the brake discs are destroyed.

- Check the brake linings regularly.

Check the brake linings for minimum thickness A.

Minimum thickness  $A \ge 1 \text{ mm} (\ge 0.04 \text{ in})$ 

- » If the minimum thickness is less than specified:
   Change the front brake linings. ◄
- Check the brake linings for damage and cracking.
- » If there is wear or tearing:
  - Change the front brake linings. 🔌

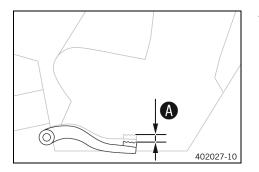

### 12.7 Checking the free travel of foot brake lever

### Warning

Danger of accidents The brake system fails in the event of overheating.

If there is no free travel on the foot brake lever, pressure builds up in the brake system on the rear brake.

- Set the free travel on the foot brake lever in accordance with the specification.

Move the foot brake lever back and forth between the end stop and the contact to the foot brake cylinder piston and check free travel **A**.

Guideline

```
Free travel at foot brake lever 3 ... 5 mm (0.12 ... 0.2 in)
```

### Info

You will know that contact has been made with the foot brake cylinder piston when there is increased resistance when you activate the foot brake lever.

- » If the free travel does not meet specifications:
  - Adjust the basic position of the foot brake lever. ▲
     (Image p. 66)

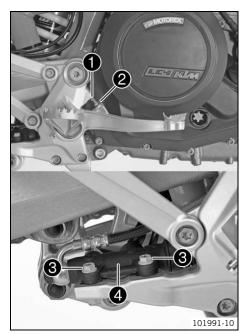

### 12.8 Adjusting the basic position of the foot brake lever A

### Warning

**Danger of accidents** The brake system fails in the event of overheating.

If there is no free travel on the foot brake lever, pressure builds up in the brake system on the rear brake.

- Set the free travel on the foot brake lever in accordance with the specification.

- Loosen fittings (3) on foot brake cylinder (4).
  - To adjust the basic position of the foot brake lever to individual requirements, loosen nut **1** and turn screw **2** accordingly.

#### • Info

The range of adjustment is limited. The screw must be screwed into the footrest bracket by at least four turns.

- Position foot brake cylinder 4 so that the foot brake lever has the necessary free travel.
- Mount and tighten fittings 3.
   Guideline

| Screw connection,   | M6 | 10 Nm (7.4 lbf ft) |
|---------------------|----|--------------------|
| foot brake cylinder |    |                    |

- Check the free travel of the foot brake lever. (I p. 65)
- Tighten nut 🚺.

### 12.9 Checking the rear brake fluid level

### Warning

**Danger of accidents** An insufficient brake fluid level will cause the brake system to fail.

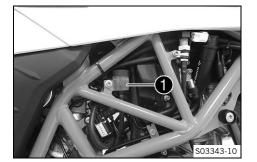

If the brake fluid level drops below the **MIN** marking, the brake system is leaking or the brake linings are worn down.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

### Warning

Danger of accidents Old brake fluid reduces the braking effect.

 Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

- Stand the vehicle upright.
- Check the brake fluid level in the brake fluid reservoir.
  - » If the fluid level reaches the MIN marking ●:
     Add rear brake fluid. ◄ (○ p. 67)

### 12.10 Adding rear brake fluid 🔌

Warning Danger of accidents An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the **MIN** marking, the brake system is leaking or the brake linings are worn down.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

# Warning

Skin irritation Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

## Warning

Danger of accidents Old brake fluid reduces the braking effect.

 Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

# Note Forvior

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

## Info

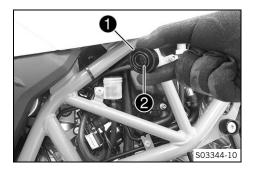

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint. Only use clean brake fluid from a sealed container.

### Preparatory work

- Check the rear brake linings. (Ep. 68)

# **12 BRAKE SYSTEM**

#### Main work

- Position the vehicle vertically.
- Remove screw cap 1 with the washer and membrane 2.
- Add brake fluid up to the **MAX** marking.
  - Brake fluid DOT 4 / DOT 5.1 (🕮 p. 118)
- Mount screw cap with washer and membrane.

Clean up the overflowed or spilled brake fluid immediately with water.

### 12.11 Checking the rear brake linings

### Warning

Danger of accidents Worn-out brake linings reduce the braking effect.

 Ensure that worn-out brake linings are replaced immediately. (Your authorized KTM workshop will be glad to help.)

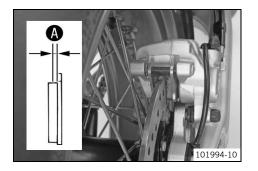

### Warning

Danger of accidents Damaged brake discs reduce the braking effect.

If the brake linings are not changed in time, the brake lining carriers grind against the brake disc. As a consequence, the braking effect is greatly reduced and the brake discs are destroyed.

- Check the brake linings regularly.

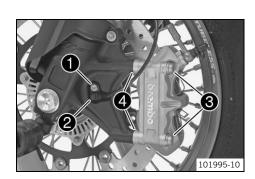

- Check the brake linings for minimum thickness 🚯.

| N | linimum thickness 🗛         | ≥ 1 mm (≥ 0.04 in)     |
|---|-----------------------------|------------------------|
| » | If the minimum thickness is | s less than specified: |
|   |                             |                        |

- Change the rear brake linings. 🔌
- Check the brake linings for damage and cracking.
  - » If there is wear or tearing:
    - Change the rear brake linings. 🔌

### 13.1 Removing the front wheel 🔦

#### Preparatory work

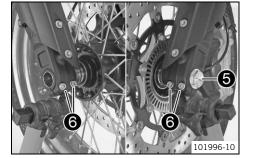

- Raise the motorcycle with the rear lifting gear. (🕮 p. 46)
- Lift the motorcycle with the front lifting gear. (IP p. 47)

#### Main work

- Remove screw **1** and pull wheel speed sensor **2** out of the hole.
- Remove screws **3** and spacers **4**.
- Press back the brake linings by slightly tilting the brake caliper laterally on the brake disc.
- Pull the brake caliper carefully back from the brake disc and hang to the side.

#### Info

Do not operate the hand brake lever if the brake caliper has been removed.

# Loosen screw (5) by several rotations.Loosen screws (6).

- Press on screw **6** to push the wheel spindle out of the axle
- Remove screw 6.

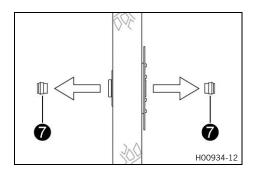

clamp.

### Warning

**Danger of accidents** Damaged brake discs reduce the braking effect.

- Always lay the wheel down in such a way that the brake disc is not damaged.
- Hold the front wheel and remove the wheel spindle. Take the front wheel out of the fork.
- Remove spacers 7.

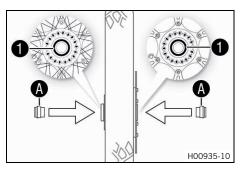

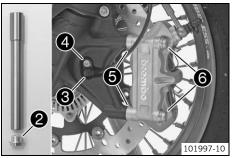

### 13.2 Installing the front wheel A

### Warning

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

#### Main work

- Check the wheel bearing for damage and wear.
  - » If the wheel bearing is damaged or worn:
    - Change front wheel bearing. 🔌
- Clean and grease shaft seal rings 1 and contact surfaces A of the spacers.

Long-life grease (🕮 p. 120)

- Insert the spacers.
- Clean and grease the wheel spindle.

| Long-life | grease | (2) | p. | 120) |
|-----------|--------|-----|----|------|
|-----------|--------|-----|----|------|

- Jack up the front wheel into the fork, position it, and insert the wheel spindle.
- Mount and tighten screw 2.
   Guideline

uldelille

| Screw, front wheel | M24x1.5 | 45 Nm (33.2 lbf ft) |
|--------------------|---------|---------------------|
| spindle            |         |                     |

- Position wheel speed sensor 3 in the hole.

Mount and tighten screw  $oldsymbol{4}$  .

Guideline

| Screw, wheel speed | M6 | 6 Nm (4.4 lbf ft) |
|--------------------|----|-------------------|
| sensor             |    |                   |

- Position the brake caliper on the brake disc.
  - ✓ The brake linings are correctly positioned.
- Position spacers (5). Mount screws (6), but do not tighten yet.
   Guideline

| Screw, front  | M10x1.25 | 45 Nm (33.2 lbf ft)       |
|---------------|----------|---------------------------|
| brake caliper |          | Loctite <sup>®</sup> 243™ |

- Operate the hand brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point. Secure the hand brake lever in the activated position.
  - The brake caliper straightens.

### Tighten screws 6

|           | 7 |
|-----------|---|
| Guideline |   |

#### **Finishing work**

- Remove the rear of the motorcycle from the wheel stand. (I p. 47)

#### 13.3 Removing the rear wheel 🔌

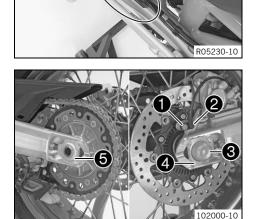

#### **Preparatory work**

- Raise the motorcycle with the rear lifting gear. (I p. 46)

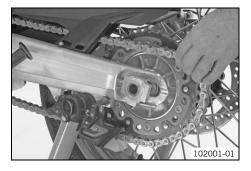

#### Main work

\_

- Take the brake line out of the guide.

- Manually press the brake caliper toward the brake disc to push back the brake piston.
  - Remove screw ① and pull wheel speed sensor ② out of the hole.
- Remove nut **3**. Take off chain adjuster **4**.
- Pull out wheel spindle 5 to the point where the chain adjuster is no longer in contact with the adjusting screw.
- Push the rear wheel forward as far as possible and take the chain off the rear sprocket.

Info

- Cover the components to protect them against damage.
- Hold the rear wheel and remove the wheel spindle.

#### Warning

**Danger of accidents** Damaged brake discs reduce the braking effect.

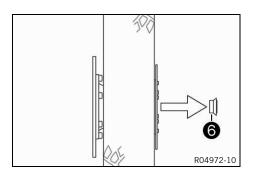

- Always lay the wheel down in such a way that the brake disc is not damaged.
- Take the rear wheel out of the link fork.

i

#### Info

Remove spacer **6**.

Do not operate the foot brake when the rear wheel is removed.

#### 13.4 Installing the rear wheel 🔌

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

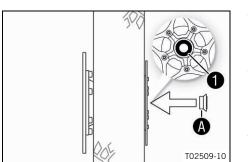

#### Warning

Warning

**Danger of accidents** There is no braking effect to start with at the rear brake after installing the rear wheel.

- Actuate the foot brake several times before going on a ride until you can feel a firm pressure point.

#### Main work

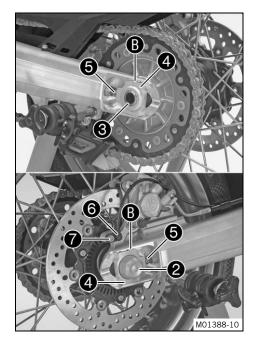

- Check the rear hub damping rubber pieces. 

   (IIIII) p. 74)
- Check the wheel bearing for damage and wear.
  - » If the wheel bearing is damaged or worn:
    - Change the rear wheel bearing. 🔧
- Clean and grease shaft seal ring **1** and contact surface **A** of the spacer.

Long-life grease (🕮 p. 120)

Insert a spacer.

# WHEELS, TIRES 13

- Clean and grease the thread of the wheel spindle and nut 2.
   Long-life grease (IP p. 120)
- Clean and grease the wheel spindle.
   Long-life grease (IP p. 120)
- Mount the damping rubber and rear sprocket carrier in the rear wheel.
- Position the rear wheel.
  - ✓ The brake linings are correctly positioned.
- Push the rear wheel forward as far as possible and lay the chain on the rear sprocket.
- Mount wheel spindle ③ and chain adjuster ④. Mount nut ②, but do not tighten yet.
- Make sure that chain adjusters 4 are fitted correctly on adjusting screws 5.

#### Guideline

In order for the rear wheel to be correctly aligned, the markings on the left and right chain adjusters must be in the same position relative to reference markings **B**.

#### • Info

Mount left and right chain adjusters ④ in the same position.

- Tighten nut **2**.

|           | ino   | dol | 12111 |
|-----------|-------|-----|-------|
| Guideline | III E | ue  | (1)   |
|           |       |     |       |

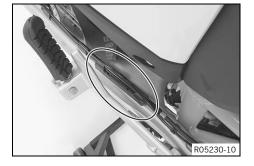

| Nut, rear wheel spin- | M25x1.5 | 90 Nm (66.4 lbf ft) |
|-----------------------|---------|---------------------|
| dle                   |         |                     |

- Position wheel speed sensor 6 in the hole.
- Mount and tighten screw 7.

#### Guideline

| Screw, wheel speed | M6 | 6 Nm (4.4 lbf ft) |
|--------------------|----|-------------------|
| sensor             |    |                   |

- Position the brake line in the guide.
  - Operate the foot brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point.

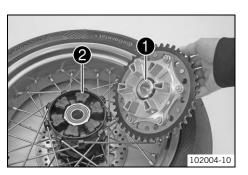

#### **Finishing work**

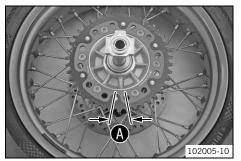

- Remove the rear of the motorcycle from the wheel stand.
  - (📖 p. 47)

#### 13.5 Checking the rear hub damping rubber pieces 🔌

#### Info

The engine power is transmitted from the rear sprocket to the rear wheel via the 6 damping rubber pieces. They eventually wear out during operation. If the damping rubber pieces are not changed in time, the rear sprocket carrier and the rear hub will be damaged.

#### Preparatory work

- Raise the motorcycle with the rear lifting gear. (🕮 p. 46)
- Remove the rear wheel. 🔌 (📖 p. 71)

#### Main work

#### Check bearing 1.

- » If the bearing is damaged or worn:
  - Change the bearing of the rear sprocket carrier.
- Check damping rubber pieces ② of the rear hub for damage and wear.
  - » If the damping rubber pieces of the rear hub are damaged or worn:
    - Change all the damping rubber pieces of the rear hub.
- Lay the rear wheel on a workbench with the rear sprocket facing upwards and insert the wheel spindle in the hub.
- To check play A, hold the rear wheel tight and try to turn the rear sprocket with your hand.

#### • Info

Measure the play on the outside of the rear sprocket.

| Play of damping rubber | ≤ 5 mm (≤ 0.2 in) |
|------------------------|-------------------|
| pieces on rear wheel   |                   |

- If clearance 🚯 is larger than the specified value:
  - Change all the damping rubber pieces of the rear hub.

#### **Finishing work**

- Install the rear wheel. ◄ (≅ p. 72)
- Remove the rear of the motorcycle from the wheel stand.
   (Image p. 47)
- Check the chain tension. (
  P. 55)

#### 13.6 Checking the tire condition

#### Warning

Danger of accidents If a tire bursts while riding, the vehicle becomes uncontrollable.

- Ensure that damaged or worn tires are replaced immediately. (Your authorized KTM workshop will be glad to help.)

#### Warning

Danger of crashing Different tire tread patterns on the front and rear wheel impair the handling characteristic.

Different tire tread patterns can make the vehicle significantly more difficult to control.

Make sure that only tires with a similar tire tread pattern are fitted to the front and rear wheel.

#### Warning

Danger of accidents Non-approved or non-recommended tires and wheels impact the handling characteristic.

Only use tires/wheels approved by KTM with the corresponding speed index. \_

# Warning

Danger of accidents New tires have reduced road grip.

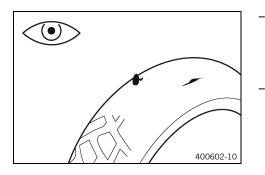

The contact surface on new tires is not yet roughened.

Run in new tires with moderate riding at alternating angles. Running-in phase 200 km (124 mi)

#### Info

The type, condition, and pressure of the tires all have a major impact on the handling characteristic of the motorcycle.

Worn tires have a negative effect on handling characteristics, especially on wet surfaces.

- Check the front and rear tires for cuts, run-in objects, and other damage.
  - If the tires have cuts, run-in objects, or other damage: » Change the tires. 🔌
- Check the tread depth.

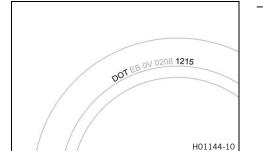

# Info

Adhere to the legally required minimum tread depth.

Minimum tread depth ≥ 2 mm (≥ 0.08 in)

If the tread depth is less than the minimum tread depth: » \_ Change the tires. 🔌

## Info

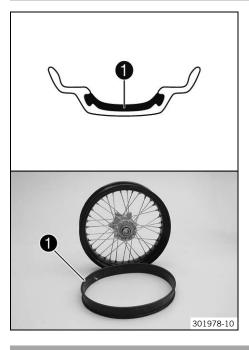

Check the tire age.

The tire date of manufacture is usually contained in the tire label and is indicated by the last four digits of the **DOT** number. The first two digits indicate the week of manufacture and the last two digits the year of manufacture.

KTM recommends that the tires be changed after 5 years at the latest, regardless of the actual state of wear.

- If the tires are more than 5 years old:
  - \_ Change the tires. 🔌

#### 13.7 Tubeless tire system

This vehicle uses a tubeless tire system in which a rim seal band **1** is used instead of the conventional tube.

The advantages of the tubeless system lie in the absence of danger from a faulty tube. This greatly reduces the risk of a sudden loss in pressure.

The moments of inertia of these wheels are smaller than in conventional spoked wheels with a tube. This results in better handling and riding comfort.

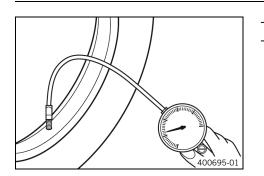

The rigid rim design results in a wire spoke wheel that is almost entirely maintenance-free.

KTM recommends that the rim seal band be changed after 5 years at the latest, regardless of the actual state of wear.

#### 13.8 Checking tire pressure

#### • Info

Low tire pressure leads to abnormal wear and overheating of the tire. Correct tire pressure ensures optimal riding comfort and maximum tire service life.

- Remove the protection cap.
- Check the tire pressure when the tires are cold.

| Tire pressure when solo        |                  |
|--------------------------------|------------------|
| front                          | 2.3 bar (33 psi) |
| rear                           | 2.5 bar (36 psi) |
| Tire pressure with passenger / | full payload     |
| front                          | 2.3 bar (33 psi) |
| rear                           | 2.5 bar (36 psi) |

- » If the tire pressure does not meet specifications:
  - Correct the tire pressure.
- Mount the protection cap.

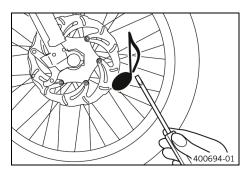

#### 13.9 Checking the spoke tension

#### Warning

**Danger of accidents** Incorrectly tensioned spokes impair the handling characteristic and result in secondary damage.

The spokes break due to being overloaded if they are too tightly tensioned. If the tension in the spokes is too low, then lateral and radial run-out will form in the wheel. Other spokes will become looser as a result.

 Check spoke tension regularly, and in particular on a new vehicle. (Your authorized KTM workshop will be glad to help.)

Strike each spoke briefly using a screwdriver blade.

#### Info

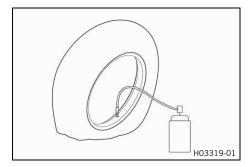

The frequency of the sound depends on the spoke length and spoke diameter.

If spokes of the same length and diameter vibrate with a different tone, this is an indication that the spoke tensions differ.

You should hear a high note.

- » If the spoke tension differs:
  - Correct the spoke tension.

#### 13.10 Using tire repair spray

| Λ | Wa |
|---|----|
|   | -  |

#### Warning

**Danger of accidents** Incorrect use of tire repair spray will result in the repaired tire losing pressure.

Tire repair spray cannot be used for all types of damage.

- Observe the instructions and specifications of the manufacturer of the tire repair spray.
- After repairing a tire with tire repair spray, ride slowly and carefully.
- Ride no further than to the nearest workshop and have the tire changed.

Tire repair spray should only be used in an emergency. We recommend transporting the broken down vehicle to the nearest workshop instead of using tire repair spray.

#### 14.1 Removing the 12-V battery 🔦

#### Warning

Risk of injury Battery acid and battery gases cause serious chemical burns.

- Keep 12 V batteries out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Avoid contact with battery acid and battery gases.
- Keep sparks or open flames away from the 12 V battery.
- Only charge 12 V batteries in well-ventilated rooms.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes with water for at least 15 minutes and consult a doctor immediately if battery acid and battery gases get into the eyes.

- Open the fuel tank filler cap. (
  p. 19)
- Remove the seat. (🕮 p. 49)

#### Main work

- Remove screws 1.
- Push the retaining bracket toward the rear and remove it.
- Take off positive terminal cover **2**.
- Disconnect negative cable 3 from the 12-V battery.
- Disconnect positive cable 4 from the 12-V battery.
  Lift out the 12-V battery.

Never operate the motorcycle with a discharged 12-V battery or without a 12-V battery. In both cases, electrical components and safety devices can be damaged. The vehicle will therefore no longer be roadworthy.

#### 14.2 Installing the 12-V battery 🔌

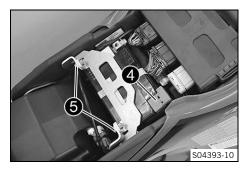

#### Main work

Insert the 12-V battery into the battery compartment with the terminals facing to the rear.

12-V battery (YTZ10S) (🕮 p. 112)

# **ELECTRICAL SYSTEM 14**

- Position positive cable **()** with washer **(2)**.
- Position negative cable **3** with washer **2**.
- Mount and tighten the screw.
   Guideline

| Screw, battery termi- | M6 | 4.5 Nm        |
|-----------------------|----|---------------|
| nal                   |    | (3.32 lbf ft) |

- Position positive terminal cover 4.
- Position retaining bracket and mount and tighten screws (5).
   Guideline

| Remaining screws, | M6 | 10 Nm (7.4 lbf ft) |
|-------------------|----|--------------------|
| chassis           |    |                    |

#### **Finishing work**

- Mount the seat. (🕮 p. 50)
- Set the clock. (🕮 p. 21)

#### 14.3 Charging the 12-V battery 🔦

## Warning

Risk of injury Battery acid and battery gases cause serious chemical burns.

- Keep 12 V batteries out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Avoid contact with battery acid and battery gases.
- Keep sparks or open flames away from the 12 V battery.
- Only charge 12 V batteries in well-ventilated rooms.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes with water for at least 15 minutes and consult a doctor immediately if battery acid and battery gases get into the eyes.

#### Note

Environmental hazard 12 V batteries contain environmentally hazardous materials.

- Do not dispose of 12 V batteries as household waste.
- Dispose of 12 V batteries at a collection point for used batteries.

### Note

**Environmental hazard** Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

#### lnfo

Even when there is no load on the 12-V battery, it discharges steadily each day.

The charging level and the method of charging are very important for the service life of the 12-V battery. Rapid recharging with a high charging current shortens the service life of the battery.

If the charging current, charging voltage and charging time are exceeded, electrolyte escapes through the safety valves. This reduces the capacity of the 12-V battery.

If the 12-V battery is depleted from starting the vehicle repeatedly, the battery must be charged immediately.

If the 12-V battery is left in a discharged state for an extended period, it will become deeply discharged and sulfating occurs, destroying the battery.

The 12-V battery is maintenance-free, i.e. the acid level does not have to be checked.

#### Preparatory work

- Open the fuel tank filler cap. (🕮 p. 19)
- Remove the seat. (🕮 p. 49)
- Remove the 12-V battery. 🔌 (🕮 p. 78)

#### Main work

Connect a battery charger to the 12-V battery. Switch on the battery charger.

#### Battery charger (58429074000)

You can also use the battery charger to test the open-circuit voltage and starting ability of the 12-V battery, and to test the alternator. In addition, you cannot overcharge the 12-V battery with this device.

#### • Info

- Never remove cover ①. Charge the 12-V battery to a maximum of 10% of the capacity specified on battery housing ②.
- Switch off the battery charger after charging and disconnect from the 12-V battery.

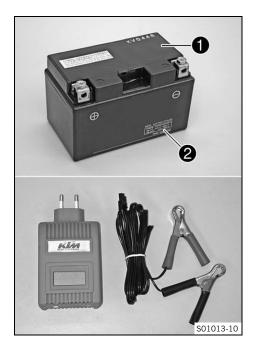

#### Guideline

The charging current, charging voltage, and charging time must not be exceeded.

| Recharge the 12-V battery   | 3 months |
|-----------------------------|----------|
| regularly when the motorcy- |          |
| cle is not being used       |          |

#### **Finishing work**

- Install the 12-V battery. ◄ (🕮 p. 78)
- Mount the seat. (💷 p. 50)
- Set the clock. ( p. 21)

#### 14.4 Changing the main fuse

# Warning

Fire hazard Incorrect fuses overload the electrical system.

S04579-10

- Only use fuses with the required ampere value.
- Do not bypass or repair fuses.

#### Info

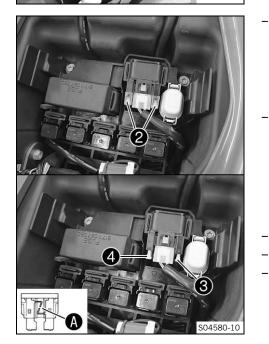

The main fuse protects all electrical power consumers of the vehicle. It is in the housing of the starter relay next to the 12-V battery.

#### Preparatory work

- Open the fuel tank filler cap. (IP p. 19)

#### Main work

- Pull engine electronics control unit 1 off the holder and hang it to the side.
- Take off protection caps 2.

Remove a defective main fuse **3** with needle nose pliers.

# Info

i

#### Insert a new main fuse.

Fuse (58011109130) (🕮 p. 112)

#### Info

Insert a new spare fuse into the starter relay to have it available when needed.

- Check that the electrical system is functioning properly.
- Mount the protection caps.
- Position the EFI control unit.

#### **Finishing work**

- Mount the seat. (🕮 p. 50)
- Set the clock. (🕮 p. 21)

#### 14.5 **Changing the ABS fuses**

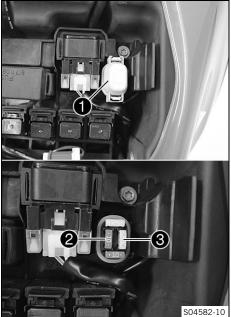

## Warning

Fire hazard Incorrect fuses overload the electrical system.

- Only use fuses with the required ampere value.
- Do not bypass or repair fuses.

#### Info

Two fuses for the ABS are located under the seat. These fuses protect the return pump and the hydraulic unit of the ABS. The third fuse, which protects the ABS control unit, is located in the fuse box.

- Open the fuel tank filler cap. (📖 p. 19)
- Remove the seat. (E p. 49)
- Pull off engine electronics control unit from the holder and hang it to the side.

#### To change the fuse of the ABS hydraulic unit:

- Take off protection cap 1.
- Remove the fuse **2** of the ABS hydraulic unit.
- Insert a new fuse.

Fuse (75011088010) (🕮 p. 112)

Mount the protection cap. \_

#### To change the fuse of the ABS return pump:

- Take off protection cap 1.
- Remove the fuse **3** of the ABS return pump.
- Insert a new fuse.

Fuse (75011088025) (🕮 p. 112)

\_ Mount the protection cap.

#### **Finishing work**

- Position the motor electronics control unit.
- Mount the seat. ( p. 50)

#### 14.6 Changing the fuses of individual electrical power consumers

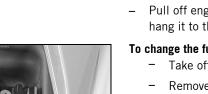

#### Info

The fuse box containing the fuses of individual electrical power consumers is located under the seat.

#### **Preparatory work**

- Open the fuel tank filler cap. (
  p. 19)
- Remove the seat. (I p. 49)

Preparatory work

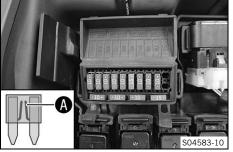

- Pull off engine electronics control unit from the holder and hang it to the side.

#### Main work

\_

Open fuse box cover 🚺.

Remove the faulty fuse.
 Guideline

| Fuse <b>1</b> - 10 A - ignition, combination instrument, clock, engine electronics control unit |
|---|
|   |
| Fuse <b>2</b> - 10 A - ignition, combination instrument, engine                                 |

| Fuse 5 - 10 A - horn, brake light, turn signal  |
| Fuse 6 - 15 A - high beam, low beam, position light, tail                                       |
| light, license plate lamp   |
| Fuse 7 - 10 A - for auxiliary equipment ACC 1 (permanent  |
| positive)   |
| Fuse 8 - 10 A - for auxiliary equipment ACC 2 (ignition   |
| plus), USB charging socket  |
| Fuse <b>9</b> - 10 A - ABS  |
| Fuse <b>10</b> - not assigned   |
| Fuse SPARE - 10 A/15 A - spare fuses  |
|   |

#### • Info A fai

A faulty fuse has a burned-out fuse wire (A).

Warning

Fire hazard Incorrect fuses overload the electrical system.

- Only use fuses with the required ampere value.
- Do not bypass or repair fuses.
- Insert the spare fuse with the correct rating.

| Fuse (75011088010) (🕮 p. 112) |  |
|-------------------------------|--|
| Fuse (75011088015) (📖 p. 112) |  |

#### Tip

i

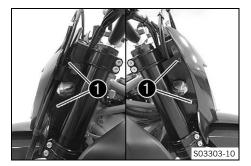

Put a spare fuse in the fuse box so that it is available if needed.

- Check the function of the electrical power consumer.
- Close the fuse box cover.

#### Finishing work

- Mount the seat. (💷 p. 50)

#### 14.7 Removing the headlight mask with the headlight

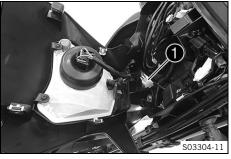

- Cover the fender with a cloth.
- Remove screws 1 on both sides.
- Tip the headlight mask forward.

- Disconnect plug-in connector 2 of the headlight.
- Take off the headlight mask.

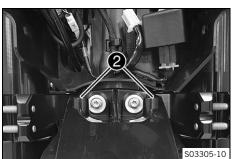

#### 14.8 Installing the headlight mask with the headlight

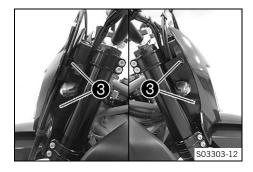

- Main work
  Connect plug-in connector 1 of the headlight.
- Check that the lighting is functioning properly.

Remove the cloth from the fender and position the headlight mask.

Headlight mask engages in the fender on the bushings
 2.

Position the headlight mask.

# Info

•

Pay attention to routing of the brake line.

Mount and tighten screws 3.

| Guideline        |    |                   |  |
|------------------|----|-------------------|--|
| Screw, headlight | M5 | 2 Nm (1.5 lbf ft) |  |
| mask             |    |                   |  |

#### Finishing work

- Check the headlight setting. (🕮 p. 86)

#### 14.9 Changing the headlight bulb

#### Note

Damage to reflector Grease on the reflector reduces the light intensity.

Grease on the bulb will evaporate due to the heat and be deposited on the reflector.

S03306-10

- Clean and degrease the bulbs before mounting.
- Do not touch the bulbs with your bare hands.

#### Preparatory work

- Remove the headlight mask with the headlight. (IP p. 84)

#### Main work

- Unplug connector 1.
- Take off protection cap **2** of the headlight bulb.

# 4 503307-10

- Detach spring bar 3.
- Remove headlight bulb 4.
- Insert a new headlight bulb into the headlight housing.

| Headlight (H4 / socket P43t) (🛤 p. 112) |  |
|---|--|
|---|--|

- Fix the headlight bulb in the headlight using the spring bar.
- Mount the protection cap. Plug in the connector.

#### Finishing work

- Install the headlight mask with the headlight. (I p. 84)
- Check the headlight setting. (🕮 p. 86)

#### 14.10 Changing the position light lamp

#### Note

Damage to reflector Grease on the reflector reduces the light intensity.

Grease on the bulb will evaporate due to the heat and be deposited on the reflector.

- Clean and degrease the bulbs before mounting.
- Do not touch the bulbs with your bare hands.

#### Preparatory work

Remove the headlight mask with the headlight. (I p. 84)

#### Main work

- Remove bulb socket **1**.

- Pull position light lamp **2** out of the bulb socket.
- Insert a new position light lamp in the bulb socket.

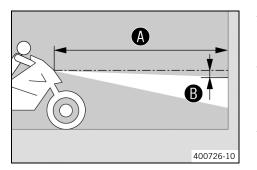

Position light (W5W / socket W2.1x9.5d) (💷 p. 112)

- Insert the bulb socket in the reflector.

#### **Finishing work**

- Install the headlight mask with the headlight. (I p. 84)
- Check the headlight setting. (🕮 p. 86)

#### 14.11 Checking the headlight setting

- Position the vehicle upright on a horizontal surface in front of a light wall and make a marking at the height of the center of the low beam headlight.

| Distance 🚯 | 5 cm (2 in) |
|------------|-------------|
| _          |             |

Position the vehicle vertically at a distance A away from the wall.

#### Guideline

| Distance | A | 5 m (16 ft) |
|----------|---|-------------|
|----------|---|-------------|

- The rider now mounts the motorcycle with luggage and passenger if applicable.
- Switch on the low beam.
- Check the headlight setting.

The light-dark boundary must be exactly on the lower marking when the motorcycle is ready to be operated with the rider mounted along with any luggage and a passenger if applicable.

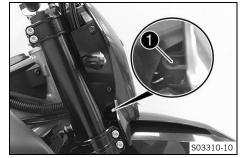

- » If the boundary between light and dark does not meet specifications:
  - Adjust headlight range. (
    p. 87)

#### 14.12 Adjusting the headlight range

#### Preparatory work

- Check the headlight setting. (EP p. 86)

#### Main work

- Loosen screw 1.
- Adjust the headlight range by pivoting the headlight. Guideline

The boundary between light and dark must be exactly on the lower mark for a motorcycle with rider (instructions on how to apply the mark: Checking the headlight setting).

If you have a payload, you may have to correct the headlight range.

- Tighten screw 1.

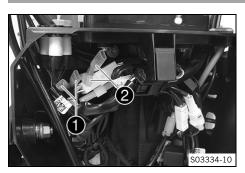

#### 14.13 USB socket

A USB socket ① for supplying power to external devices is located on the left side of the headlight mask. The USB socket is activated when the ignition is switched on.

| USB socket    |       |
|---------------|-------|
| Voltage       | 5 V   |
| Maximum cur-  | 2.1 A |
| rent consump- |       |
| tion          |       |

#### 14.14 ACC1 and ACC2

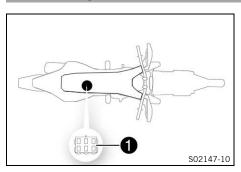

#### Installation location

The power supplies ACC1 ① and ACC2 ② are located behind the headlight mask.

#### Info

The power supplies are protected by a fuse; however, this fuse also protects other electrical power consumers. The maximum continuous load is therefore significantly lower than the value of the fuse. Do not use a stronger fuse.

## 14.15 Diagnostics connector

Diagnostics connector **1** is located under the engine electronics control unit.

#### 15.1 Cooling system

Water pump **1** in the engine ensures forced circulation of the coolant.

The pressure resulting from the warming of the cooling system is regulated by a valve in radiator cap **2**. Heat expansion causes excess coolant to flow into compensating tank **3**. When the temperature falls, this surplus coolant is sucked back into the cooling system. This ensures that operating the vehicle at the specified coolant temperature will not result in a risk of malfunctions.

125 °C (257 °F)

The coolant is cooled by the air stream and radiator fan (4), which is activated depending on the temperature.

The lower the speed, the less the cooling effect. Dirty cooling fins also reduce the cooling effect.

#### 15.2 Checking the antifreeze and coolant level

# Warning

**Danger of scalding** During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses
  or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

#### Warning

**Danger of poisoning** Coolant is toxic and a health hazard.

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

#### Condition

The engine is cold.

#### **COOLING SYSTEM** 15

- Place the motorcycle on a horizontal surface using the side stand.
- Remove the cover of compensating tank 1.
- Check the antifreeze in the coolant.

| −25 −45 °C (−13 −49 °F) |
|-------------------------|
|-------------------------|

- If the antifreeze in the coolant does not match the specified value:
  - Correct the antifreeze in the coolant.
- Check the coolant level in the compensating tank.

The coolant level must be between the two markings.

- If the coolant level does not match the specified value:
  - Correct the coolant level.
    - Coolant ( p. 118)
- Mount the cover of the compensating tank.
- Remove radiator cap **2**.
- Check the antifreeze in the coolant.

-25 ... -45 °C (-13 ... -49 °F)

- If the antifreeze in the coolant does not match the specified value:
  - Correct the antifreeze in the coolant.
- Check the coolant level in the radiator.

The radiator must be filled completely.

- If the coolant level does not match the specified value: »
  - Check the coolant level and the reason for the loss.

Coolant (📖 p. 118)

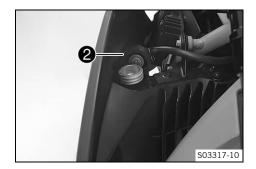

Mount the radiator cap.

#### 15.3 Checking the coolant level

Warning

Danger of scalding During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the \_ cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

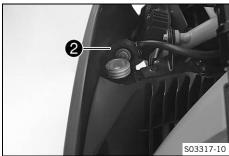

#### Warning

Danger of poisoning Coolant is toxic and a health hazard.

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

#### Condition

The engine is cold.

- Place the motorcycle on a horizontal surface using the side stand.
- Check the coolant level in compensating tank  $oldsymbol{1}$  .

The coolant level must be between the two markings.

- » If the coolant level does not match the specified value:
  - Correct the coolant level.

Coolant (🕮 p. 118)

Remove radiator cap **2** and check the coolant level in the radiator.

The radiator must be filled completely.

- » If the coolant level does not match the specified value:
  - Check the coolant level and the reason for the loss.

Coolant (🕮 p. 118)

- Mount the radiator cap.

#### 15.4 Draining the coolant 🔦

#### Warning

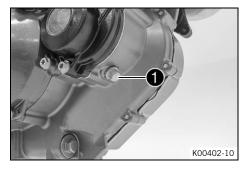

**Danger of scalding** During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses
  or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

# Warning

**Danger of poisoning** Coolant is toxic and a health hazard.

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

#### Condition

The engine is cold.

- Position the motorcycle upright.
- Position an appropriate container under the engine.
- Remove screw **①**. Take off the radiator cap.
- Completely drain the coolant.
- Mount and tighten screw 
   with a new seal ring.
   Guideline

| Screw plug, water | M10x1 | 15 Nm (11.1 lbf ft) |
|-------------------|-------|---------------------|
| pump drain hole   |       |                     |

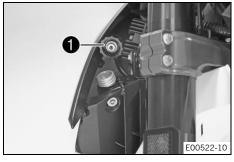

#### 15.5 Filling/bleeding the cooling system 🔌

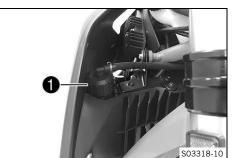

## Warning

Danger of poisoning Coolant is toxic and a health hazard.

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

Stand the motorcycle on a level surface using the side stand.
Remove radiator cap 1.

· Refill with coolant.

Coolant (🕮 p. 118)

- Completely fill the radiator with coolant.
- Mount radiator cap 1.

- Remove the cover of the compensating tank.
- Add coolant up to the marking A.
- Mount the cover of the compensating tank.

#### Danger

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use effective exhaust extraction when starting or running the engine in an enclosed space.
- Start the engine and allow it to warm up.
- Stop the engine and allow it to cool down.
- Check the coolant level. (I p. 90)

#### 15.6 Changing the coolant 🔦

#### Warning

Danger of scalding During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses
  or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

#### Warning

Danger of poisoning Coolant is toxic and a health hazard.

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

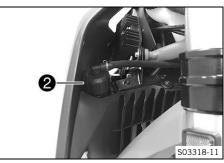

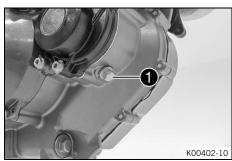

#### Condition

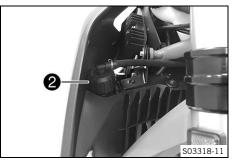

- The engine is cold.

- Position the motorcycle upright.
- Position an appropriate container under the engine.
- Remove screw **①** with the seal ring.

#### **COOLING SYSTEM** 15

- Remove radiator cap **2**.
- Completely drain the coolant.

Mount and tighten screw **①** with a new seal ring. Guideline

| Screw plug, water | M10x1 | 15 Nm (11.1 lbf ft) |
|-------------------|-------|---------------------|
| pump drain hole   |       |                     |

Stand the motorcycle on a level surface using the side stand. \_ Refill with coolant. \_

- Completely fill the radiator with coolant. \_
- Mount radiator cap **2**.
- Remove cover **3** of the compensating tank.
- Add coolant to the top marking.
- Mount the cover of the compensating tank.

## Danger

Danger of poisoning Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use effective exhaust extraction when starting or running the engine in an enclosed space.
- Start the engine and allow it to warm up.
- Stop the engine and allow it to cool down.

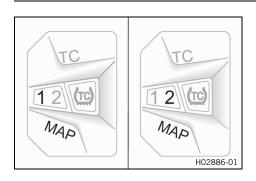

#### **Finishing work**

Check the coolant level. ( p. 90) \_

#### 16.1 Changing the riding mode

#### • Info

The desired riding mode can be activated via the **MAP** button on the combination switch. The setting most recently selected is activated again when restarting. The riding mode can also be changed during the ride.

**Condition** Throttle grip closed.

- Press **MAP** button until the LED displays the desired riding mode. Riding mode **1** is **STREET** and riding mode **2** is **SPORT**.
  - ✓ STREET balanced response
  - SPORT direct response

#### Info

The riding mode only influences the throttle response. The homologated performance is available in both riding modes. In riding mode **2**, the traction control allows more slip and rise of the front wheel. In riding mode **2**, the ABS switches to ABS mode **Supermoto**.

#### 16.2 Adjusting traction control

#### Info

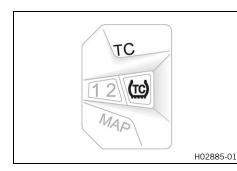

Traction control is activated when the ignition is switched on.

The traction control lowers the tightening torque in case of loss of traction in the rear wheel. When traction control is switched off, the rear wheel may spin during high acceleration and on surfaces

with low grip, resulting in a risk of crashing.

Traction control can also be adjusted during the ride.

Traction control cannot be deactivated until a minimum speed has previously been reached and the self test is complete.

#### **Deactivating traction control:**

Condition

Throttle grip closed. Speed before deactivation:  $\geq$  4 km/h ( $\geq$  2.5 mph)

Press and hold the **TC** button for five seconds.

✓ The TC LED lights up when the traction control is deactivated.

#### Activating the traction control:

Condition

Throttle grip closed.

- Press and hold the **TC** button for five seconds.
  - ✓ The **TC** LED does not light up when the traction control is activated.

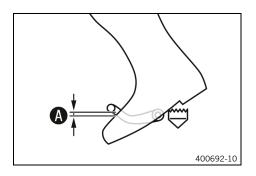

• Info

If the TC indicator lamp and both riding mode lamps light up at same time, a malfunction has been detected in the traction control. Contact an authorized KTM workshop.

#### 16.3 Checking the basic position of the shift lever

#### • Info

When driving, the shift lever must not touch the rider's boot when in the basic position. If the shift lever is permanently touching the boot, the transmission will be subject to excessive load; this can cause a malfunction of the quickshifter (optional).

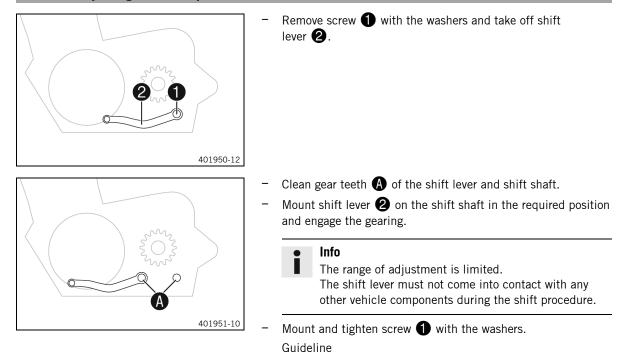

Sit on the vehicle in the riding position and determine distance A between the upper edge of your boot and the shift lever.

Distance between shift lever10 ... 20 mm (0.39 ...and upper edge of boot0.79 in)

- If the distance does not meet specifications:
- Adjust the basic position of the shift lever. ◄
   (□ p. 96)

#### 16.4 Adjusting the basic position of the shift lever **A**

| Screw, shift<br>lever | M6 | 14 Nm (10.3 lbf ft)<br><b>Loctite®243™</b> |
|-----------------------|----|--|
|-----------------------|----|--|

#### 17.1 Checking the engine oil level

- Info
- The engine oil level must be checked when the engine is warm.

#### Condition

The engine is at operating temperature.

#### **Preparatory work**

- Stand the motorcycle upright on a horizontal surface.

#### Main work

Check the engine oil level.

#### Info

After switching off the engine, wait one minute before checking the level.

The engine oil must be between the lower and upper edge of the oil level viewer.

- » If the engine oil level is not at the specified level:
  - Add engine oil. (💷 p. 100)

#### 17.2 Changing the engine oil and oil filter, cleaning the oil screens 🔌

#### Warning

Note

**Danger of scalding** Engine and gear oil get very hot when the motorcycle is ridden.

- Wear suitable protective clothing and safety gloves.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

# ₹¢

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

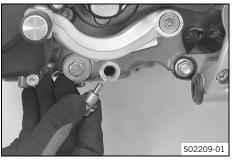

#### Info

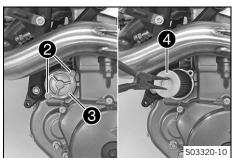

Drain the engine oil while the engine is at operating temperature.

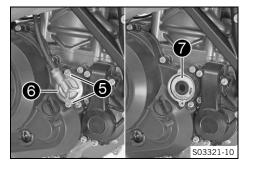

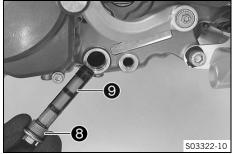

- Position an appropriate container under the engine.
- Remove oil drain plug **1** with the magnet and seal ring.
- Allow the engine oil to drain completely.

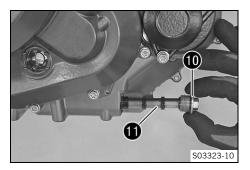

# **17 SERVICE WORK ON THE ENGINE**

- Thoroughly clean the oil drain plug with magnet.
- Mount the oil drain plug with the magnet and seal ring and tighten it.

Guideline

| Oil drain plug with | M12x1.5 | 20 Nm (14.8 lbf ft) |
|---------------------|---------|---------------------|
| magnet              |         |                     |

- Remove screws **2**. Take off oil filter cover **3** with the O-ring.
- Pull oil filter 4 out of the oil filter housing.

Lock ring plier (51012011000)

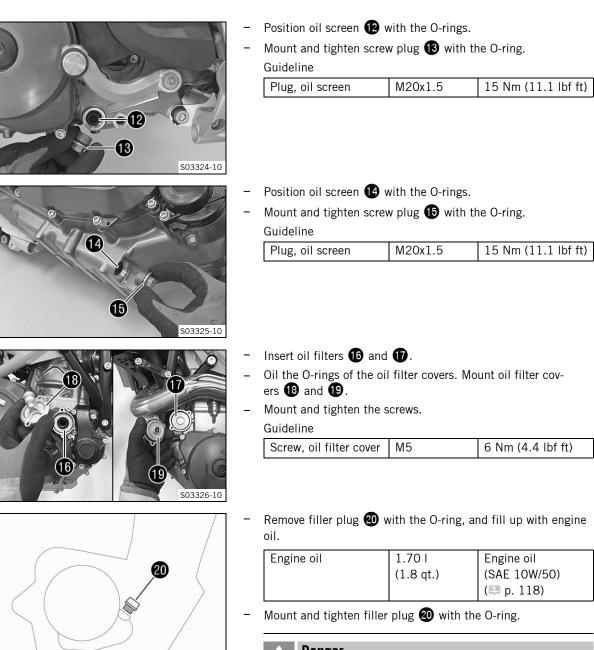

- Remove screws (5). Take off oil filter cover (6) with the Oring.
  - Pull oil filter 7 out of the oil filter housing.

Lock ring plier (51012011000)

- Allow the engine oil to drain completely.
- Thoroughly clean the parts and the sealing surface.
- Remove screw plug (8) with oil screen (9) and the O-rings.

- Remove screw plug with oil screen and the O-rings.
- Allow the engine oil to drain completely.
- Thoroughly clean the parts and the sealing surface.

# SERVICE WORK ON THE ENGINE 17

S03327-10

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use effective exhaust extraction when starting or running the engine in an enclosed space.
- Start the engine and check for leaks.

•

# **17 SERVICE WORK ON THE ENGINE**

#### 17.3 Adding engine oil

- Info
  - Too little engine oil or poor-quality engine oil will result in premature wear of the engine.

H01066-10

- Remove filler plug 1 with the O-ring, and fill up with engine oil.
- Fill engine oil to the middle of the level viewer.

Engine oil (SAE 10W/50) (📖 p. 118)

#### Info

- In order to achieve optimal engine oil performance, it is not advisable to mix different engine oils. KTM recommends changing the engine oil where necessary.
- Mount and tighten filler plug 🕦 with the O-ring.

#### Danger

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use effective exhaust extraction when starting or running the engine in an enclosed space.
- Start the engine and check for leaks.

#### **Finishing work**

- Check the engine oil level. (🕮 p. 97)

#### 18.1 Cleaning the motorcycle

#### Note

**Material damage** Components become damaged or destroyed if a pressure cleaner is used incorrectly. The high pressure forces water into the electrical components, connectors, throttle cables, and bearings, etc. Pressure which is too high causes malfunctions and destroys components.

- Do not direct the water jet directly on to electrical components, connectors, throttle cables or bearings.
- Maintain a minimum distance between the nozzle of the pressure cleaner and the component.
   Minimum clearance
   60 cm (23.6 in)

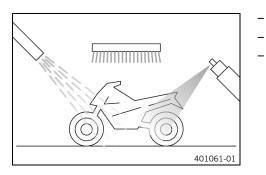

## Note

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

#### Info

To maintain the value and appearance of the motorcycle over a long period, clean it regularly. Avoid direct sunshine when cleaning the motorcycle.

- Close off exhaust system to keep water from entering.
- Remove loose dirt first with a soft jet of water.
- Spray the heavily soiled parts with a normal commercial motorcycle cleaner and clean using a brush.

Motorcycle cleaner (🕮 p. 120)

#### Info

Use warm water containing normal motorcycle cleaner and a soft sponge.

Never apply motorcycle cleaner to a dry vehicle; always rinse the vehicle with water first.

If the vehicle was operated in road salt, clean it with cold water. Warm water would enhance the corrosive effects of salt.

- After rinsing the motorcycle with a gentle spray of water, allow it to dry thoroughly.
- Remove the closure of the exhaust system.
  - Warning Danger of a

**Danger of accidents** Moisture and dirt impair the brake system.

- Brake carefully several times to dry out and remove dirt from the brake linings and the brake discs.
- After cleaning, ride the vehicle a short distance until the engine warms up.

#### Info

The heat produced causes water at inaccessible locations in the engine and on the brake system to evaporate.

- Push back the protection caps of the handlebar controls to allow any water that has penetrated to evaporate.
- After the motorcycle has cooled down, lubricate all moving parts and pivot points.
- Clean the chain. (E p. 54)
- Treat bare metal (except for brake discs and the exhaust system) with a corrosion inhibitor.

Preserving materials for paints, metal and rubber (🕮 p. 120)

Treat all painted parts with a mild paint care product.

```
Perfect finish and high gloss polish for paints (IPP p. 120)
```

```
Info
```

- Do not polish parts that were matte when delivered as this would strongly impair the material quality.
- Treat all plastic parts and powder-coated parts with a mild cleaning and care product.

Special cleaner for glossy and matte paint finishes, metal and plastic surfaces (IPP p. 120)

Lubricate the ignition/steering lock.

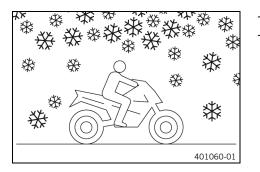

Universal oil spray (IPP p. 120)

18.2 Checks and maintenance steps for winter operation

#### Info

If you use the motorcycle in winter, salt can be expected on the roads. You should therefore take precautions against aggressive road salt.

After riding on salted roads, thoroughly clean the vehicle with cold water and dry it well. Warm water enhances the corrosive effects of salt.

Clean the motorcycle. (E p. 101)

Clean the brake system.

#### Info

- After EVERY trip on salted roads, thoroughly clean the brake calipers and brake linings, after they have cooled down and without removing them, with cold water and dry them carefully. After riding on salted roads, thoroughly clean the motorcycle with cold water and dry it well.
- Treat the engine, the swingarm, and all other bare or zincplated parts (except the brake discs) with a wax-based corrosion inhibitor.

Corrosion inhibitor must not come in contact with the brake discs as this would greatly reduce the braking force.

◀

- Clean the chain. (💷 p. 54)

#### 19.1 Storage

Warning

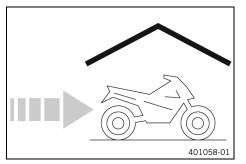

**Danger of poisoning** Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.
- Keep fuels correctly in a suitable canister, and out of the reach of children.

#### Info

If you plan to garage the motorcycle for a longer period, perform the following steps or have them performed.

Before storing the motorcycle, check all parts for function and wear. If service, repairs, or replacements are necessary, you should do this during the storage period (less workshop overload). In this way, you can avoid long workshop waiting times at the start of the new season.

 When refueling for the last time before taking the motorcycle out of service, add fuel additive.

Fuel additive (🕮 p. 120)

- Refuel. (🕮 p. 37)
- Clean the motorcycle. (
   p. 101)
- Change the engine oil and the oil filter, clean the oil screens. ◄ (ﷺ p. 97)
- Check the antifreeze and coolant level. (
   p. 89)
- Check tire pressure. (I p. 76)
  - Remove the 12-V battery. 🔌 (🕮 p. 78)
- Charge the 12-V battery. 🔌 (💷 p. 79)

Guideline

| Storage temperature of the  | 0 35 °C (32 95 °F) |
|-----------------------------|--------------------|
| 12-V battery without direct |                    |
| sunlight                    |                    |

- Store the vehicle in a dry location that is not subject to large fluctuations in temperature.

# • Info

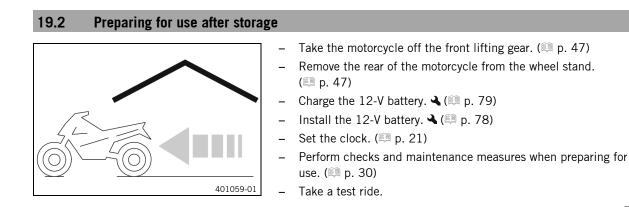

KTM recommends jacking up the motorcycle.

- Raise the motorcycle with the rear lifting gear. (IP p. 46)
- Lift the motorcycle with the front lifting gear. (E p. 47)
- Cover the motorcycle with a tarp or cover that is permeable to air.

#### Info

i

Do not use non-porous materials since they prevent humidity from escaping, thus causing corrosion. Avoid running the engine for a short time only. Since the engine cannot warm up properly, the water vapor produced during combustion condenses and causes valves and the exhaust system to rust.

#### Brake fluid DOT 4 / DOT 5.1

#### Standard/classification

- DOT

```
Guideline
```

 Use only brake fluid that complies with the specified standard (see specifications on the container) and that exhibits the corresponding properties.

#### Recommended supplier

Castrol

– REACT PERFORMANCE DOT 4

#### **MOTOREX®**

Brake Fluid DOT 5.1

#### Coolant

#### Guideline

- Only use high-grade, silicate-free coolant with corrosion inhibitor additive for aluminum motors. Low grade and unsuitable antifreeze causes corrosion, deposits and frothing.
- Do not use pure water as only coolant is able to meet the requirements needed in terms of corrosion protection and lubrication properties.
- Only use coolant that complies with the requirements stated (see specifications on the container) and that has the relevant properties.

| Antifreeze protection to at least | -25 °C (-13 °F) |
|-----------------------------------|-----------------|
|-----------------------------------|-----------------|

The mixture ratio must be adjusted to the necessary antifreeze protection. Use distilled water if the coolant needs to be diluted.

The use of premixed coolant is recommended.

Observe the coolant manufacturer specifications for antifreeze protection, dilution and miscibility (compatibility) with other coolants.

#### Recommended supplier MOTOREX® – COOLANT M3.0

#### Engine oil (SAE 10W/50)

#### Standard/classification

- JASO T903 MA2 (🕮 p. 121)
- SAE (📖 p. 121) (SAE 10W/50)

#### Guideline

Use only engine oils that comply with the specified standards (see specifications on the container) and that
possess the corresponding properties.

Fully synthetic engine oil

```
Recommended supplier
MOTOREX®
```

```
    Power Synt 4T
```

#### Fork oil (SAE 4) (48601166S1)

#### Standard/classification

– SAE (📖 p. 121) (SAE 4)

#### Guideline

 Use only oils that comply with the specified standards (see specifications on the container) and that exhibit the corresponding properties.

#### Shock absorber fluid (SAE 2.5) (50180751S1)

#### Standard/classification

– SAE (🕮 p. 121) (SAE 2.5)

Guideline

 Use only oils that comply with the specified standards (see specifications on the container) and that exhibit the corresponding properties.

#### Super unleaded (ROZ 95)

#### Standard/classification

– DIN EN 228 (ROZ 95)

#### Guideline

- Only use super unleaded fuel that matches or is equivalent to the specified standard.
- Fuel with an ethanol content of up to 10% (E10 fuel) is safe to use.

Do **not** use fuel containing methanol (e.g., M15, M85, M100) or more than 10% ethanol (e.g., E15, E25, E85, E100).

Joker 440 Synthetic

#### **JASO T903 MA2**

Different technical development directions required a separate specification for motorcycles – the **JASO T903 MA2** standard.

Earlier, engine oils from the automobile industry were used for motorcycles because there was no separate motorcycle specification.

Whereas long service intervals are demanded for automobile engines, the focus for motorcycle engines is on high performance at high engine speeds.

In most motorcycle engines, the transmission and clutch are lubricated with the same oil.

The JASO T903 MA2 standard meets these special requirements.

#### SAE

The SAE viscosity classes were defined by the Society of Automotive Engineers and are used for classifying oils according to their viscosity. The viscosity describes only one property of oil and says nothing about quality.

# 25 INDEX OF SPECIAL TERMS

| ABS | Anti-lock braking system    | Safety system that prevents locking of the wheels<br>when driving straight ahead without the influence of<br>lateral forces |
|-----|-----------------------------|---|
| MTC | Motorcycle Traction Control | Auxiliary function of the motor control that reduces engine torque with spinning rear wheel                                 |
| OBD | On-board diagnosis          | Vehicle system, which monitors the specified parame-<br>ters of the vehicle electronics                                     |
| -   | Quickshifter +              | Engine electronics function for shifting up and down without clutch actuation   |

| Art. no. | Article number |
|----------|----------------|
| ca.      | circa          |
| cf.      | compare        |
| e.g.     | for example    |
| etc.     | et cetera      |
| i.a.     | inter alia     |
| no.      | number         |
| poss.    | possibly       |

#### 27.1 Red symbols

Red symbols indicate an error condition that requires immediate intervention.

|      | The coolant temperature warning lamp lights up red – The coolant temperature has reached a critical value. Stop immediately (taking care not to endanger yourself or other road users in the process), switch off the engine, allow it to cool down and check the coolant level. |
|------|--|
| AT A | The oil pressure warning lamp lights up red – The oil pressure is too low. Stop immediately, taking care not to endanger yourself or other road users in the process, and switch off the engine.   |

#### 27.2 Yellow and orange symbols

Yellow and orange symbols indicate an error condition that requires prompt intervention. Active driving aids are also represented by yellow or orange symbols.

| (ABS) | ABS warning lamp lights up/flashes yellow – If the ABS warning lamp lights up, the ABS is not active. The ABS warning lamp also lights up if a malfunction is detected. Contact an authorized KTM workshop. If the ABS warning lamp flashes slowly, ABS mode <b>Supermoto</b> is active.  |
|-------|---|
|       | Fuel level warning lamp lights up orange – The fuel level has reached the reserve mark.   |
| (H)   | Malfunction indicator lamp lights up orange – The OBD has detected a malfunction in the vehicle electronics. Come safely to a halt, and contact an authorized KTM workshop.   |
|       | TC indicator lamp lights up/flashes yellow – If the TC indicator lamp lights up, the cornering MTC ( p. 35) is not active. If the TC indicator lamp and both riding mode lamps light up at same time, a malfunction has been detected. Contact an authorized KTM workshop. The TC indicator lamp flashes if the cornering MTC actively engages. |

#### 27.3 Green and blue symbols

Green and blue symbols reflect information.

|   | The high beam indicator lamp lights up blue – The high beam is switched on. |
|---|---|
| N | The idle indicator lamp lights up green – The transmission is in neutral.   |
|   | Turn signal indicator lamp flashes green – The turn signal is switched on.  |
