**OWNER'S MANUAL 2015** 

WWW.KTM.COM

# Freeride 350 EU Freeride 350 AU

Art. no. 3213184en

# **DEAR KTM CUSTOMER**

Congratulations on your decision to purchase a KTM motorcycle. You are now the owner of a state-of-the-art sports motorcycle that will give you enormous pleasure if you service and maintain it accordingly.

We wish you a lot of enjoyment in riding this vehicle.

Enter the serial numbers of your vehicle below.

Chassis number (* p. 10)	Dealer's stamp
Engine number (🕶 p. 10)	
Key number (🕶 p. 10)	

The Owner's Manual contained the latest information for this model series at the time of going to print. Slight deviations resulting from continuing development and design of the motorcycles can, however, not be completely excluded.

All specifications are non-binding. KTM Motorrad AG specifically reserves the right to modify or delete technical specifications, prices, colors, forms, materials, services, designs, equipment, etc., without prior notice and without specifying reasons, to adapt these to local conditions, as well as to stop production of a particular model without prior notice. KTM accepts no liability for delivery options, deviations from illustrations and descriptions, misprints, and other errors. The models portrayed partly contain special equipment that does not belong to the regular scope of supply.

# 1 MEANS OF REPRESENTATION

<b>X</b> "	ndicates an expected reaction (e.g. of a work step or a function). ndicates an unexpected reaction (e.g. of a work step or a function).
×	ndicates an unexpected reaction (e.g. of a work step or a function).
А	
y y	All work marked with this symbol requires specialist knowledge and technical understanding. In the interest of your own safety, have these jobs performed by an authorized KTM workshop. There, your motorcycle will be opt nally cared for by specially trained experts using the specialist tools required.
<b>-</b> 1	ndicates a page reference (more information is provided on the specified page).

Specific name	Identifies a proprietary name.
Name®	Identifies a protected name.
Brand™	Identifies a brand available on the open market.

# 2 SAFETY ADVICE

# 2.1 Use definition - intended use

KTM sport motorcycles are designed and built to withstand the normal stresses and strains of offroad use.

# e Info

The motorcycle is authorized for public road traffic in the homologous (reduced) version only. In the derestricted version, the motorcycle must be used only on closed off property remote from public road traffic. The motorcycle is designed for trial riding and difficult offroad terrain and not for motocross.

# 2.2 Safety advice

A number of safety instructions need to be followed to operate the vehicle safely. Therefore, read this manual carefully. The safety instructions are highlighted in the text and are referred to at the relevant passages.

# lnfo

The vehicle has various information and warning labels at prominent locations. Do not remove information/warning labels. If they are missing, you or others may not recognize dangers and may therefore be injured.

# 2.3 Degrees of risk and symbols

# Danger

Identifies a danger that will immediately and invariably lead to fatal or serious permanent injury if the appropriate measures are not taken.

# Warning

Identifies a danger that is likely to lead to fatal or serious injury if the appropriate measures are not taken.

# Caution

Identifies a danger that may lead to minor injuries if the appropriate measures are not taken.

### Note

Identifies a danger that will lead to considerable machine and material damage if the appropriate measures are not taken.

# Warning

Identifies a danger that will lead to environmental damage if the appropriate measures are not taken.

# 2.4 Tampering warning

Tampering with the noise control system is prohibited. Federal law prohibits the following acts or the causing thereof:

- 1 The removal or rendering inoperative by any person other than for purposes of maintenance, repair, or replacement, of any device or element of design incorporated into any new vehicle for the purpose of noise control prior to its sale or delivery to the ultimate purchaser or while it is in use, or
- 2 the use of the vehicle after such device or element of design has been removed or rendered inoperative by any person.

Among those acts presumed to constitute tampering are the acts listed below:

- 1 Removal or puncturing of the main silencer, baffles, header pipes or any other components which conduct exhaust gases.
- 2 Removal or puncturing of parts of the intake system.
- 3 Lack of proper maintenance.
- 4 Replacing moving part of the vehicle, or parts of the exhaust or intake system, with parts other than those specified by the manufacturer.

# 2 SAFETY ADVICE

# 2.5 Safe operation

# Danger

**Danger of accidents** Danger arising from the rider's judgement being impaired.

 Do not operate the vehicle while under the influence of alcohol, drugs and certain medications or physically or mentally impaired.

# Danger

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and/or death.

- When running the engine, always make sure there is sufficient ventilation, and do not start or run the engine in an enclosed space without an effective exhaust extraction system.

# Warning

Danger of burns Some vehicle components become very hot when the vehicle is operated.

Do not touch hot components such as exhaust system, radiator, engine, shock absorber, and the brake system. Allow these
components to cool down before starting work on them.

Only operate the vehicle when it is in perfect technical condition, in accordance with its intended use, and in a safe and environmentally compatible manner.

An appropriate driver's license is needed to ride the vehicle on public roads.

Have malfunctions that impair safety promptly eliminated by an authorized KTM workshop.

Adhere to the information and warning labels on the vehicle.

# 2.6 Protective clothing

# Warning

Risk of injury Missing or poor protective clothing presents an increased safety risk.

- Wear protective clothing (helmet, boots, gloves, pants and jacket with protectors) every time you ride the vehicle. Always wear protective clothing that is in good condition and meets the legal requirements.

In the interest of your own safety, KTM recommends that you only operate the vehicle while wearing protective clothing.

# 2.7 Work rules

Special tools are necessary for certain tasks. The tools are not contained in the vehicle but can be ordered under the number in parentheses. E.g.: bearing puller (15112017000)

During assembly, non-reusable parts (e.g. self-locking screws and nuts, seals and seal rings, O-rings, pins, lock washers) must be replaced by new parts.

In some instances, a thread locker (e.g. **Loctite**<sup>®</sup>) is required. The manufacturer instructions for use must be followed. After disassembly, clean the parts that are to be reused and check them for damage and wear. Change damaged or worn parts. After you complete the repair or service work, check the operating safety of the vehicle.

# 2.8 Environment

If you use your motorcycle responsibly, you can ensure that problems and conflicts do not occur. To protect the future of the motorcycle sport, make sure that you use your motorcycle legally, display environmental consciousness, and respect the rights of others. When disposing of used oil, other operating and auxiliary fluids, and used components, comply with the laws and regulations of the respective country.

Because motorcycles are not subject to the EU regulations governing the disposal of used vehicles, there are no legal regulations that pertain to the disposal of an end-of-life motorcycle. Your authorized KTM dealer will be glad to advise you.

# 2.9 Owner's Manual

It is important that you read this Owner's Manual carefully and completely before making your first trip. The Owner's Manual contains useful information and many tips on how to operate, handle, and maintain your motorcycle. Only then will you find out how to customize the vehicle ideally for your own use and how you can protect yourself from injury.

Keep the Owner's Manual in an accessible place to enable you to refer to it as needed.

If you would like to know more about the vehicle or have questions on the material you read, please contact an authorized KTM dealer. The Owner's Manual is an important component of the vehicle and should be handed over to the new owner if the vehicle is sold.

# **3 IMPORTANT NOTES**

# 3.1 Guarantee, warranty

The work prescribed in the service schedule must be carried out by an authorized KTM workshop only and confirmed in the customer's Service & Warranty Booklet and in the **KTM Dealer.net**; otherwise, all warranty claims will be void. No warranty claims can be considered for damage resulting from manipulations and/or alterations to the vehicle.

Additional information on the guarantee or warranty and the procedures involved can be found in the Service & Warranty Booklet.

# 3.2 Operating and auxiliary substances

#### A Warning

Environmental hazard Improper handling of fuel is a danger to the environment.

Do not allow fuel to get into the ground water, the ground, or the sewage system.

Use operating and auxiliary substances (such as fuel and lubricants) as specified in the Owner's Manual.

### 3.3 Spare parts, accessories

For your own safety, only use spare parts and accessory products that are approved and/or recommended by KTM and have them installed by an authorized KTM workshop. KTM accepts no liability for other products and any resulting damage or loss. Certain spare parts and accessory products are specified in parentheses in the descriptions. Your authorized KTM dealer will be glad to advise you.

The current **KTM PowerParts** for your vehicle can be found on the KTM website. International KTM Website: http://www.ktm.com

### 3.4 Service

A prerequisite for perfect operation and prevention of premature wear is that the service, care, and tuning work on the engine and chassis is properly carried out as described in the Owner's Manual. Incorrect adjustment and tuning of the engine and chassis can lead to damage and breakage of components.

Use of the vehicle under difficult conditions, such as on sand or on wet and muddy surfaces, can lead to considerably more rapid wear of components such as the drive train, brake system, or suspension components. For this reason, it may be necessary to inspect or replace parts before the next scheduled service.

It is imperative that you adhere to the stipulated run-in times and service intervals. If you observe these exactly, you will ensure a much longer service life for your motorcycle.

### 3.5 Figures

The figures contained in the manual may depict special equipment.

In the interest of clarity, some components may be shown disassembled or may not be shown at all. It is not always necessary to disassemble the component to perform the activity in question. Please follow the instructions in the text.

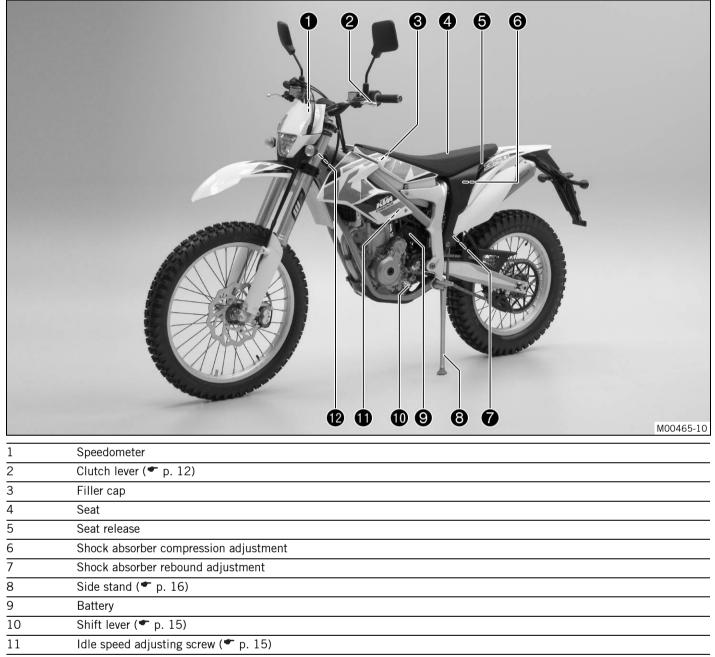

### 3.6 Customer service

Your authorized KTM dealer will be happy to answer any questions you may have on your vehicle and KTM.

A list of authorized KTM dealers can be found on the KTM website. International KTM Website: http://www.ktm.com

# 4 VIEW OF VEHICLE

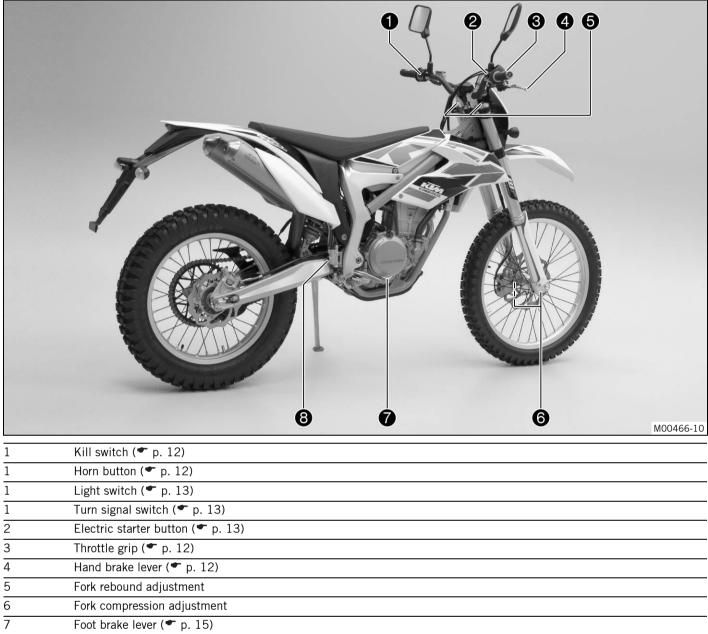

# 4.1 View of vehicle, front left (example)

12 Steering lock (\* p. 16)

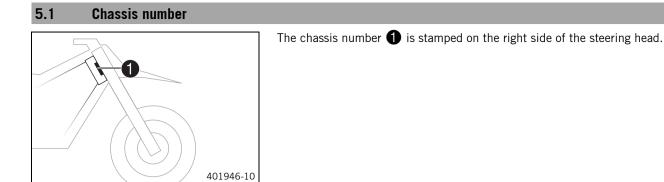

# 4 VIEW OF VEHICLE

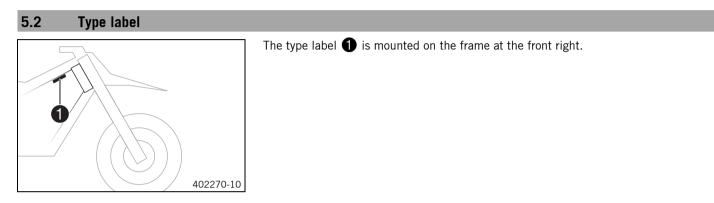

# 4.2 View of vehicle, rear right (example)

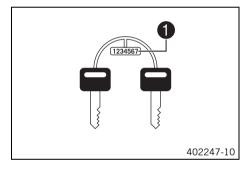

8 Level viewer for brake fluid, rear

# 5 SERIAL NUMBERS

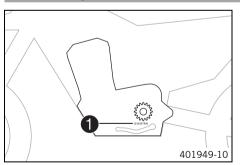

# 5.3 Key number

The key number **1** for the steering lock is stamped onto the key connector.

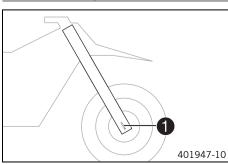

5.4 Engine number

The engine number **1** is stamped on the left side of the engine under the engine sprocket.

# Fork part number

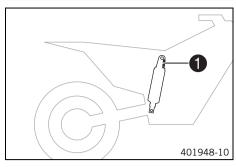

5.5

The fork part number 1 is stamped on the inner side of the axle clamp.

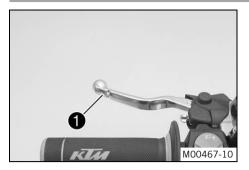

# 5 SERIAL NUMBERS

# 5.6 Shock absorber part number

The shock absorber part number **1** is stamped on the top of the shock absorber above the adjusting ring on the engine side.

### 6.1 Clutch lever

The clutch lever **1** is fitted on the left side of the handlebar. The clutch is hydraulically operated and self-adjusting.

6.2 Hand brake lever

The hand brake lever **1** is fitted on the right side of the handlebar. The front brake is engaged using the hand brake lever.

6.3 Throttle grip

The throttle grip **1** is fitted on the right side of the handlebar.

6.4 Kill switch

Kill switch **1** is fitted on the left side of the handlebar.

# Possible states

- Kill switch ⊗ in basic position In this position, the ignition circuit is closed and the engine can be started.
- Kill switch ⊗ pressed In this position, the ignition circuit is interrupted, a running engine stops, and a non-running engine will not start.

### 6.5 Horn button

The horn button **1** is fitted on the left side of the handlebar.

#### Possible states

- Horn button ⊢ in neutral position
- Horn button *▶* pressed The horn is operated in this position.

#### 6.6 **Light switch**

The light switch **1** is fitted on the left side of the handlebar.

### Possible states

≣D	Low beam on – Light switch is in the central position. In this position, the low beam and tail light are switched on.
≣D	High beam on – The light switch is turned counterclockwise. In this position, the high beam and the tail light are switched on.

#### 6.7 **Turn signal switch**

Turn signal switch **1** is fitted on the left side of the handlebar.

Possible state	s
	Turn signal light off – Turn signal switch is in the central position.
+	Turn signal light, left, on – Turn signal switch is turned to the left.
	Turn signal light, right, on – Turn signal switch is turned to the right.

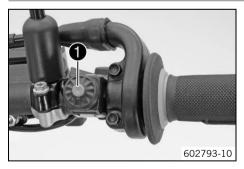

#### Emergency OFF switch (Freeride 350 AU) 6.8

The emergency OFF switch 1 is fitted on the right side of the handlebar.

Possible state	S
$\bigotimes$	Ignition off – In this position, the ignition circuit is interrupted, a run- ning engine stops, and a non-running engine will not start.
$\bigcirc$	Ignition on – In this position, the ignition circuit is closed and the engine can be started.

#### 6.9 Electric starter button (Freeride 350 EU)

Electric starter button **①** is fitted on the right side of the handlebar.

# **Possible states**

- Electric starter button (3) in basic position ٠
- Electric starter button (3) pressed In this position, the electric starter is actuated. •

#### 6.10 Electric starter button (Freeride 350 AU)

Electric starter button **①** is fitted on the right side of the handlebar.

#### **Possible states**

•

- Electric starter button (3) in basic position •
  - Electric starter button ③ pressed In this position, the electric starter is actuated.

# 6.11 Overview of indicator lamps

Possible state	es
	High beam indicator light lights up blue – High beam is switched on.
F	<b>FI</b> warning lamp ( <b>MIL</b> ) lights up/flashes orange – The OBD has detected an emission- or safety-critical fault.
	The fuel level warning lamp lights up orange – The fuel level has reached the reserve mark.
	Turn signal indicator light flashes green – Turn signal is switched on.

# 6.12 Opening the filler cap

# Danger

Fire hazard Fuel is highly flammable.

- Never refuel the vehicle near open flames or burning cigarettes, and always switch off the engine first. Be careful that no
  fuel is spilt, especially on hot vehicle components. Clean up spilt fuel immediately.
- The fuel in the fuel tank expands when warm and may emerge if overfilled. Follow the instructions on refueling.

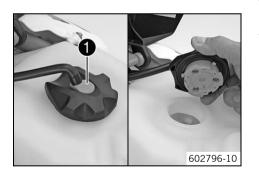

Danger of poisoning Fuel is poisonous and a health hazard.

Fuel must not come into contact with the skin, eyes, or clothing. Do not breathe in the fuel vapors. If contact occurs with
the eyes, rinse with water immediately and contact a physician. Immediately clean contaminated areas on the skin with
soap and water. If fuel is swallowed, contact a physician immediately. Change clothing that is contaminated with fuel.
Store fuel properly in a suitable canister and keep away from children.

# Warning

Environmental hazard Improper handling of fuel is a danger to the environment.

- Do not allow fuel to get into the ground water, the ground, or the sewage system.

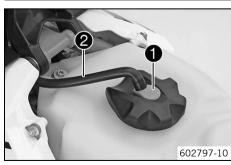

# Preparatory work

- Fold the seat up. (\* p. 45)

Main work

- Press release button ①, turn the filler cap counterclockwise, and lift it free.

# 6.13 Closing the filler cap

#### Main work

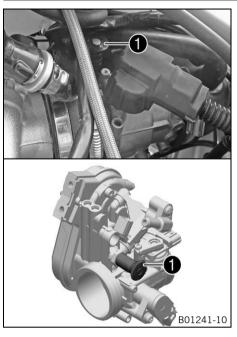

Replace the filler cap and turn clockwise until the release button 1 locks in place.

Finishing work

- Lock the seat. (🕶 p. 45)

#### 6.14 Idle speed adjusting screw

Idle speed adjusting screw 1 is located on the throttle valve body at the top left. The idle speed adjusting screw has two functions.

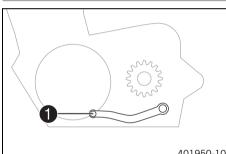

Turning it controls the idle speed.

Pulling it out all the way raises the idle speed during a cold start.

### **Possible states**

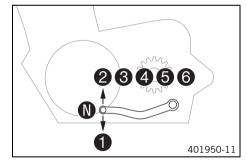

- RPM increase activated Idle speed adjusting screw is pulled out all the way. •
- RPM increase deactivated Idle speed adjusting screw is pushed in all the way. •

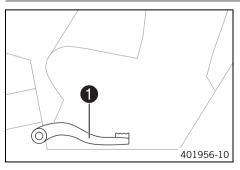

Shift lever 1 is mounted on the left side of the engine.

401950-10

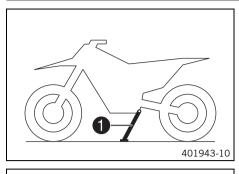

The gear positions can be seen in the photograph. The neutral or idle position is between the first and second gears.

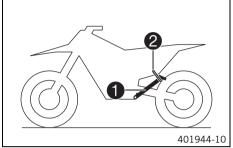

#### 6.16 Foot brake lever

Foot brake lever **1** is located in front of the right footrest. The foot brake lever is used to activate the rear brake.

# 6.17 Side stand

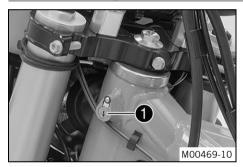

The side stand **1** is on the left side of the vehicle.

The side stand is used to park the motorcycle.

6.18 Steering lock

Steering lock **1** is fitted on the left side of the steering head. The steering lock is used to lock the steering. Steering, and therefore riding, is no longer possible.

# 6.19 Locking the steering

# Note

Danger of damage The parked vehicle may roll away or fall over.

- Always place the vehicle on a firm and even surface.

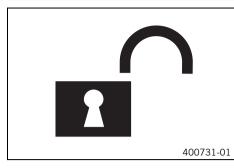

- Park the vehicle.
- Turn the handlebar as far as possible to the right.
- Insert the key in the steering lock, turn it to the left, press it in, and turn it to the right. Remove the key.
  - Steering is no longer possible.

Never leave the key in the steering lock.

# 6.20 Unlocking the steering

 Insert the key in the steering lock, turn it to the left, pull it out, and turn it to the right. Remove the key.

You can now steer the bike again.

### • Info Neve

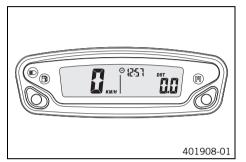

Never leave the key in the steering lock.

# 7.1 Overview

1	Overview of indicator lamps (🕶 p. 14)
2	Left button
3	Display
4	Right button

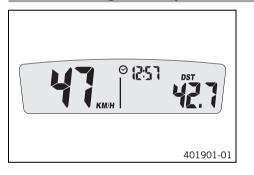

# 7.2 Activation

#### Activating the speedometer

The speedometer is activated when one of the buttons is pressed or an impulse comes from the wheel speed sensor.

# 7.3 Message on the speedometer

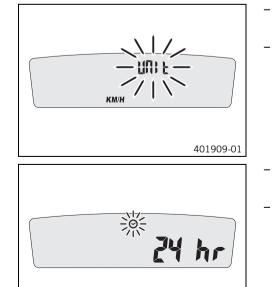

Possible states				
(C)	Battery voltage of the speedometer – Battery voltage of the speedometer is too low. Change the battery.			
~	Service – A service is due. Contact an authorized KTM workshop.			

# 7.4 Setting the speedometer

#### Condition

The motorcycle is stationary.

401911-01

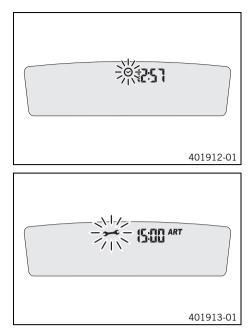

Press one of the buttons to select **UNIT** for the speed in kilometers **KM/H** or miles **M/H**.

Press both buttons for 3–5 seconds.

Wait for 5 seconds.

- $\checkmark$  The speedometer changes to the next menu item. The  $\odot$  symbol flashes.
- Press one of the buttons to select the 24h or 12h display of the clock.

✓ The Setup menu is displayed. The **UNIT** display flashes.

- Wait for 5 seconds.
  - ✓ The speedometer changes to the next menu item. The Θ symbol flashes.

### Resetting the time

- Press the left button.
  - ✓ The value decreases.

# Advancing the time

- Press the right button.
  - The value increases.
- Wait for 5 seconds.
  - ✓ The speedometer changes to the next menu item. The → symbol flashes.
- Set the service.

# Guideline

One-time service after	1 h
Service every	20 h

# Shortening the service interval

- Press the left button.
  - The value decreases.

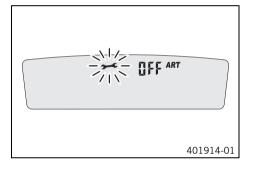

#### Extending the service interval

- Press the right button.
  - The value increases.

## Switching off the service interval display

#### – Press and hold the left button.

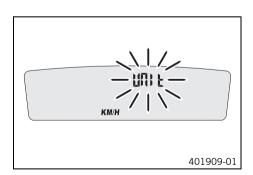

✓ The value decreases rapidly until **off** appears in the display.

# 7.5 Setting kilometers or miles

# • Info

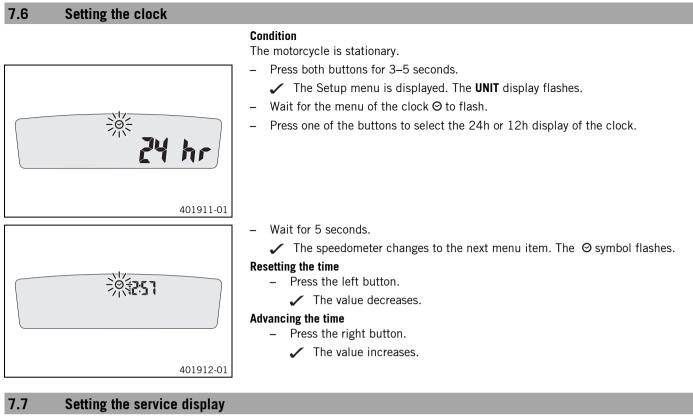

If you change the unit of measure, the **ODO** value is retained and converted accordingly.

### Condition

The motorcycle is stationary.

- Press both buttons for 3–5 seconds.
  - ✓ The Setup menu is displayed. The **UNIT** display flashes.
- Press one of the buttons to select UNIT for the speed in kilometers KM/H or miles M/H.

# Condition

The motorcycle is stationary.

- Press both buttons for 3–5 seconds.
  - ✓ The Setup menu is displayed. The **UNIT** display flashes.
- Set the service.

#### Guideline

One-time service after	1 h
Service every	20 h

#### Shortening the service interval

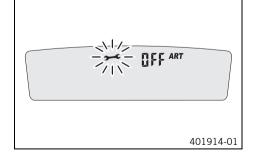

- Press the left button.
  - ✓ The value decreases.

#### Extending the service interval

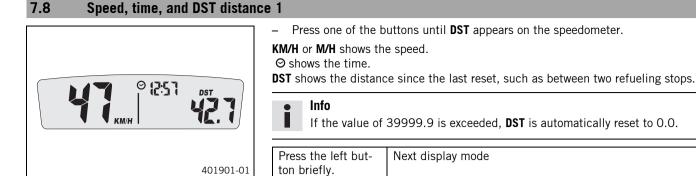

- Press the right button.
  - The value increases.

### Switching off the service interval display

- Press and hold the left button.
  - ✓ The value decreases rapidly until off appears in the display.

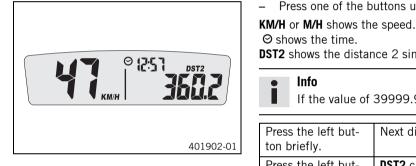

401913-01

Press the left but- ton briefly.	Next display mode
Press the left but- ton for 3 – 5 sec- onds.	<b>DST</b> can be preset to a value between 0.0 and 39999.9 by pressing the buttons.
Press the right but- ton briefly.	Next display mode
Press the right but- ton for 3 – 5 sec- onds.	DST is reset to 0.0.

#### Speed, time, and DST2 distance 2 7.9

# $\Theta$ shows the time.

**DST2** shows the distance 2 since the last reset, such as between two refueling stops.

Press one of the buttons until **DST2** appears on the speedometer.

### Info

If the value of 39999.9 is exceeded, **DST2** is automatically reset to 0.0.

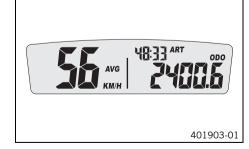

Press the left but- ton briefly.	Next display mode
Press the left but- ton for 3 – 5 sec- onds.	<b>DST2</b> can be preset to a value between 0.0 and 39999.9 by pressing the buttons.
Press the right but- ton briefly.	Next display mode
Press the right but- ton for 3 – 5 sec- onds.	DST2 is reset to 0.0.

#### 7.10 AVG average speed, ART operating hours, and ODO total distance covered

**AVG** shows the average speed since the last reset. ART shows the operating hours. **ODO** shows the total distance covered.

Press the left but- ton briefly.	Next display mode
Press the left but- ton for 3 – 5 sec- onds.	The OPEN END WRENCH SYMBOL shows the remaining oper- ating hours until the next service is due.
Press the right but- ton briefly.	Next display mode
Press the right but- ton for 3 – 5 sec- onds.	AVG is reset to 0.0.

# 8 PREPARING FOR USE

#### 8.1 Advice on first use

# Danger

Danger of accidents Danger arising from the rider's judgement being impaired.

 Do not operate the vehicle while under the influence of alcohol, drugs and certain medications or physically or mentally impaired.

# Warning

**Risk of injury** Missing or poor protective clothing presents an increased safety risk.

Wear protective clothing (helmet, boots, gloves, pants and jacket with protectors) every time you ride the vehicle. Always
wear protective clothing that is in good condition and meets the legal requirements.

# Warning

**Danger of crashing** Poor vehicle handling due to different tire tread patterns on front and rear wheels.

- The front and rear wheels must be fitted with tires with similar tread patterns to prevent loss of control over the vehicle.

Warning

Danger of accidents Critical riding behavior due to inappropriate riding.

- Adapt your riding speed to the road conditions and your riding ability.

# Warning

**Danger of accidents** Accident risk caused by presence of a passenger.

- Your vehicle is not designed to carry passengers. Do not ride with a passenger.

Danger of accidents Failure of brake system.

- If the foot brake lever is not released, the brake linings drag continuously. The rear brake may fail due to overheating. Take your foot off the foot brake lever when you are not braking.

### Warning

Danger of accidents Unstable riding behavior.

- Do not exceed the maximum permissible weight and axle loads.

# Warning

Risk of misappropriation Usage by unauthorized persons.

- Never leave the vehicle while the engine is running. Secure the vehicle against use by unauthorized persons.

# Info

When using your motorcycle, remember that others may feel disturbed by excessive noise.

- Make sure that the pre-delivery inspection work has been carried out by an authorized KTM workshop.
- ✓ You receive a delivery certificate and the Service and Warranty Booklet at vehicle handover.
- Before your first trip, read the entire operating instructions carefully.
- Get to know the controls.
- Adjust the basic position of the clutch lever. (\* p. 58)
- Adjust the free travel of the handbrake lever. (\* p. 61)
- Adjust the basic position of the foot brake lever. A (\* p. 65)
- Adjust the basic position of the shift lever. A (\* p. 86)
- Get used to handling the motorcycle on a suitable piece of land before making a longer trip.

# Info

When offroad, being accompanied by another person on another vehicle so that you can help each other is recommended.

- Try also to ride as slowly as possible and in a standing position to get a better feeling for the vehicle.
- Do not make any offroad trips that over-stress your ability and experience.
- Hold the handlebar firmly with both hands and keep your feet on the footrests when riding.
- If you carry any baggage, make sure it is fixed firmly as close as possible to the center of the vehicle and ensure even weight distribution between the front and rear wheels.

# 8 PREPARING FOR USE

### • Info Moto

Motorcycles react sensitively to any changes of weight distribution.

 Do not exceed the overall maximum permitted weight and the axle loads. Guideline

Maximum permissible overall weight	280 kg (617 lb.)
Maximum permissible front axle load	135 kg (298 lb.)
Maximum permissible rear axle load	175 kg (386 lb.)

– Run the engine in. (**\*** p. 23)

# 8.2 Running in the engine

During the running-in phase, do not exceed the specified engine speed and engine performance.
 Guideline

Maximum engine speed		
During the first operating hour	7,000 rpm	
Maximum engine performance		
During the first 3 operating hours $\leq 75 \%$		

- Avoid fully opening the throttle!

# 24

#### 9.1 Checks and maintenance work when preparing for use

# lnfo

Before riding the vehicle, always check its condition and operating safety. The vehicle must be in perfect technical condition when used.

- Check the electrical system.

- Check the front brake linings. (\* p. 63)
- Check the rear brake linings. (\* p. 67)
- Check that the brake system is functioning properly.

- Check the tire condition. (\* p. 72)

- Check the air filter.
- Check the settings of all controls and ensure that they can be operated smoothly.
- Check all screws, nuts, and hose clamps regularly for tightness.
- Check the fuel supply.

#### 9.2 Starting

### Danger

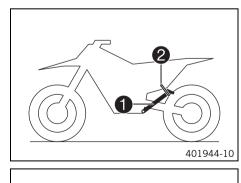

Danger of poisoning Exhaust gases are toxic and inhaling them may result in unconsciousness and/or death.

 When running the engine, always make sure there is sufficient ventilation, and do not start or run the engine in an enclosed space without an effective exhaust extraction system.

#### Note

Engine failure High engine speeds in cold engines have a negative effect on the service life of the engine.

- Always warm up the engine at low engine speeds.

Take the motorcycle off the side stand 1 and secure the side stand with rubber band 2.

· Shift gear to neutral.

(Freeride 350 AU)

– Press the emergency OFF switch into the position  $\bigcirc.$ 

#### Condition

- Ambient temperature: < 20 °C (< 68 °F)
- Pull the idle speed adjusting screw all the way out.
- Press the electric starter button.

Press the electric starter button for at most 5 seconds. Wait for a least 5 seconds before trying again.

**FI** warning lamp lights up briefly as a functional control when starting.

### 9.3 Starting off

• Info

When you are riding, the side stand must be folded up and secured with the rubber band.

- Pull the clutch lever, engage 1st gear, release the clutch lever slowly and simultaneously open the throttle carefully.

### 9.4 Shifting, riding

# Warning

Danger of accidents If you change down at high engine speed, the rear wheel can lock up.

- Do not change into a low gear at high engine speed. The engine races and the rear wheel can lock up.

### • Info

If you hear unusual noises while riding, stop immediately, switch off the engine and contact an authorized KTM workshop. First gear is used for starting off or for steep inclines.

- When conditions allow (incline, road situation, etc.), you can shift into a higher gear. To do so, release the throttle while simultaneously pulling the clutch lever, shift into the next gear, release the clutch, and open the throttle.
- After reaching maximum speed by fully opening the throttle grip, turn the throttle back so it is <sup>3</sup>/<sub>4</sub> open. This will barely reduce the speed but fuel consumption will be considerably lower.
- Always open the throttle only as much as the engine can handle abrupt throttle opening increases fuel consumption.
- To shift down, brake and close the throttle at the same time.
- Pull the clutch lever and shift into a lower gear, release the clutch lever slowly, and open the throttle or shift again.
- Switch off the engine if you expect to be standing for a long time.

# Guideline

- ≥ 2 min
- Avoid frequent and longer slipping of the clutch. This heats the engine oil, the engine, and the cooling system.
- Ride with a lower engine speed instead of with a high engine speed and a slipping clutch.

# 9.5 Applying the brakes

# Warning

Danger of accidents If you brake too hard, the wheels can lock.

- Adapt your braking to the traffic situation and the road conditions.

# Warning

- Danger of accidents Reduced braking efficiency caused by spongy pressure point of front or rear brake.
- Check the brake system and do not continue riding. (Your authorized KTM workshop will be glad to help.)

# Warning

Danger of accidents Reduced braking efficiency due to a wet or dirty brake system.

- Clean or dry a dirty or wet brake system by riding and braking gently.
- On sandy, wet or slippery surfaces, use the rear brake.
- Braking should always be completed before you go into a bend. Change down to a lower gear appropriate to your road speed.
- On long downhill stretches, use the braking effect of the engine. Change down one or two gears, but do not overstress the engine.
   In this way, you have to apply the brakes far less frequently and the brake system does not overheat.

# 9.6 Stopping, parking

### Warning

Warning

Risk of misappropriation Usage by unauthorized persons.

- Never leave the vehicle while the engine is running. Secure the vehicle against use by unauthorized persons.

Danger of burns Some vehicle components become very hot when the vehicle is operated.

- Do not touch hot components such as exhaust system, radiator, engine, shock absorber, and the brake system. Allow these components to cool down before starting work on them.

# Note

Danger of damage The parked vehicle may roll away or fall over.

- Always place the vehicle on a firm and even surface.

### Note

Fire hazard Some vehicle components become very hot when the vehicle is operated.

 Do not park the vehicle near flammable or explosive substances. Do not place objects on the vehicle while it is still warm from being run. Always let the vehicle cool first.

### Note

Material damage Damage to or destruction of components due to excessive load.

- The side stand is only designed for the weight of the motorcycle. Do no sit on the motorcycle when it is resting on the side stand.
   The side stand or the frame may become damaged and the motorcycle may fall over.
- Brake the motorcycle.
- Shift gear to neutral.
- Press and hold the kill switch  $\otimes$  while the engine is idling until the engine stops.
- Park the motorcycle on firm ground.

# 9.7 Transport

### Note

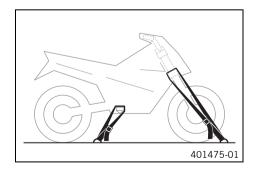

Danger of damage The parked vehicle may roll away or fall over.

– Always place the vehicle on a firm and even surface.

### Note

Fire hazard Some vehicle components become very hot when the vehicle is operated.

 Do not park the vehicle near flammable or explosive substances. Do not place objects on the vehicle while it is still warm from being run. Always let the vehicle cool first.

- Switch off the engine.
- Use tension belts or other suitable devices to secure the motorcycle against accidents or falling over.

# 9.8 Refueling

# 1 Danger

Fire hazard Fuel is highly flammable.

- Never refuel the vehicle near open flames or burning cigarettes, and always switch off the engine first. Be careful that no
  fuel is spilt, especially on hot vehicle components. Clean up spilt fuel immediately.
- The fuel in the fuel tank expands when warm and may emerge if overfilled. Follow the instructions on refueling.

# Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

Fuel must not come into contact with the skin, eyes, or clothing. Do not breathe in the fuel vapors. If contact occurs with
the eyes, rinse with water immediately and contact a physician. Immediately clean contaminated areas on the skin with
soap and water. If fuel is swallowed, contact a physician immediately. Change clothing that is contaminated with fuel.

# Note

Material damage Premature clogging of the fuel filter.

- In some countries and regions, the available fuel quality and cleanliness may not be sufficient. This will result in problems with the fuel system. (Your authorized KTM workshop will be glad to help.)
- Only refuel with clean fuel that meets the specified standards.

# Warning

**Environmental hazard** Improper handling of fuel is a danger to the environment.

- Do not allow fuel to get into the ground water, the ground, or the sewage system.

- Switch off the engine.

#### Main work

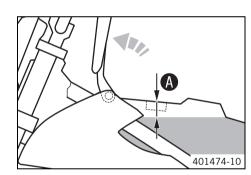

Fill the fuel tank with fuel up to measurement A.

#### Guideline

Measurement of A		30 mm (1.18 in)
Total fuel tank capacity, approx.	5.5 l (1.45 US gal)	Super unleaded (ROZ 95/RON 95/PON 91) (* p. 104)

#### **Finishing work**

- Close the filler cap. (\* p. 14)
- Lock the seat. (\* p. 45)

# **10 SERVICE SCHEDULE**

Change all engine bearings. 🔧				•	

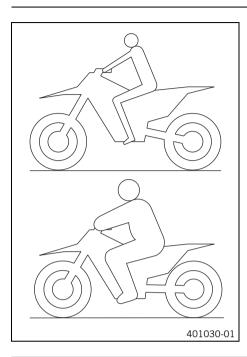

• One-time interval

• Periodic interval

# 11.1 Checking the basic chassis setting with the rider's weight

# • Info

When adjusting the basic chassis setting, first adjust the shock absorber and then the fork.

- For optimal motorcycle riding characteristics and to avoid damage to forks, shock absorbers, swingarm and frame, the basic settings of the suspension components must match the rider's weight.
- As delivered, KTM offroad motorcycles are adjusted for an average rider's weight (with full protective clothing).

Guideline

Standard rider weight	75 85 kg (165 187 lb.)
-----------------------	------------------------

- If the rider's weight is above or below this range, the basic setting of the suspension components must be adjusted accordingly.
- Small weight differences can be compensated by adjusting the spring preload, but in the case of large weight differences, the springs must be replaced.

# 11.2 Compression damping of the shock absorber

The compression damping of the shock absorber is divided into two ranges: high-speed and low-speed.

High-speed and low-speed refer to the compression speed of the rear wheel suspension and not to the vehicle speed. The high-speed setting, for example, has an effect on the landing after a jump: the rear wheel suspension compresses more quickly. The low-speed setting, for example, has an effect when riding over long ground swells: the rear wheel suspension compresses more

slowly. These two ranges can be adjusted separately, although the transition between high-speed and low-speed is gradual. Thus, changes in the high-speed range affect the compression damping in the low-speed range and vice versa.

# 11.3 Adjusting the low-speed compression damping of the shock absorber

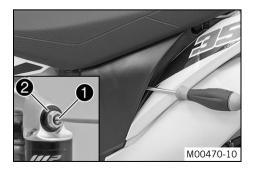

### Caution

Danger of accidents Disassembly of pressurized parts can lead to injury.

- The shock absorber is filled with high density nitrogen. Adhere to the description provided. (Your authorized KTM workshop will be glad to help.)

# Info

The low-speed setting can be seen during the slow to normal compression of the shock absorber.

Turn adjusting screw ① clockwise with a screwdriver up to the last perceptible click.

• Info

Do not loosen nut 2!

- Turn counterclockwise by the number of clicks corresponding to the shock absorber type.

Guideline

Compression damping, low-speed

compression damping, ion speed	
Comfort	20 clicks
Standard	15 clicks
Sport	5 clicks

# Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

# 11.4 Adjusting the high-speed compression damping of the shock absorber

#### Caution

Danger of accidents Disassembly of pressurized parts can lead to injury.

 The shock absorber is filled with high density nitrogen. Adhere to the description provided. (Your authorized KTM workshop will be glad to help.)

### Info

The high-speed setting can be seen during the fast compression of the shock absorber.

#### Preparatory work

- Fold the seat up. (🕶 p. 45)
- Remove the shock absorber. A (\* p. 44)

### Main work

- Turn adjusting screw 🕕 all the way clockwise with a socket wrench.

- Turn counterclockwise by the number of turns corresponding to the shock absorber type.

#### Guideline

Compression damping, high-speed	
Comfort	2.5 turns
Standard	2 turns
Sport	1 turn

#### lnfo

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

#### Finishing work

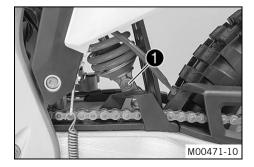

- Install the shock absorber. 🔧 (🕶 p. 44)
- Remove the motorcycle from the lift stand. (\* p. 37)

### 11.5 Adjusting the rebound damping of the shock absorber

# Caution

Danger of accidents Disassembly of pressurized parts can lead to injury.

 The shock absorber is filled with high density nitrogen. Adhere to the description provided. (Your authorized KTM workshop will be glad to help.)

- Turn adjusting screw 1 clockwise up to the last perceptible click.
  - Turn counterclockwise by the number of clicks corresponding to the shock absorber type.

#### Guideline

Rebound damping	
Comfort	20 clicks
Standard	15 clicks
Sport	10 clicks

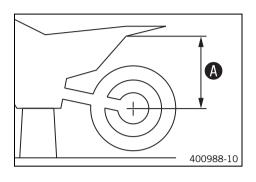

### Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

#### 11.6 Measuring rear wheel sag unloaded

#### Preparatory work

Raise the motorcycle with the lift stand. (\* p. 37) \_

### Main work

- Measure the distance as vertical as possible between the rear axle and a fixed \_ point, for example, a mark on the rear fairing.
- Note down the value as dimension  $\mathbf{A}$ .

#### **Finishing work**

\_

Remove the motorcycle from the lift stand. ( , 37)

# 11.7 Checking the static sag of the shock absorber A B 400989-10

#### Measure distance (A) of rear wheel unloaded. (\* p. 32) \_

- Hold the motorcycle upright with the aid of an assistant. \_
- Measure the distance between the rear axle and the fixed point again. \_
- Note down the value as dimension  $\mathbf{B}$ . \_

# Info

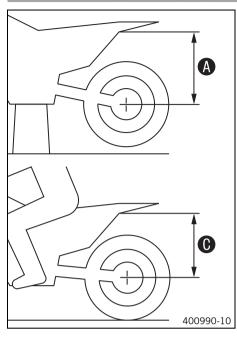

The static sag is the difference between measurements (A) and (B).

#### Check the static sag.

-	Statio	sag	15 mm (0.59 in)
---	--------	-----	-----------------

- If the static sag is less or more than the specified value: »
  - Adjust the spring preload of the shock absorber.  $\checkmark$  ( , 23)

# 11.8 Checking the riding sag of the shock absorber

# Measure distance 🚯 of rear wheel unloaded. (🕶 p. 32)

- With another person holding the motorcycle, the rider, wearing full protective clothing, sits on the seat in a normal sitting position (feet on footrests) and bounces up and down a few times.
- ✓ The rear wheel suspension levels out.
- Another person now measures the distance between the rear axle and a fixed point.
- Note down the value as dimension 🕒.

The riding sag is the difference between measurements (A) and (C).

- Check the riding sag.

	Riding sag	80 mm (3.15 in)
L		

- » If the riding sag differs from the specified measurement:
  - Adjust the riding sag. 🔌 (🕶 p. 34)

# 11.9 Adjusting the spring preload of the shock absorber 🔌

#### Caution

Danger of accidents Disassembly of pressurized parts can lead to injury.

- The shock absorber is filled with high density nitrogen. Adhere to the description provided. (Your authorized KTM workshop will be glad to help.)

Info

Before changing the spring preload, make a note of the present setting, e.g., by measuring the length of the spring.

#### Preparatory work

- - Remove the shock absorber. 🔌 (🕶 p. 44)
- After removing the shock absorber, clean it thoroughly.

# Main work

- Loosen screw 🚺.
- Turn adjusting ring **2** until the spring is no longer under tension.

- Measure the overall spring length while the spring is not under tension.
- Tighten the spring by turning adjusting ring 2 to measurement A.

Guideline

Spring preload	
Comfort	12 mm (0.47 in)
Standard	12 mm (0.47 in)
Sport	12 mm (0.47 in)

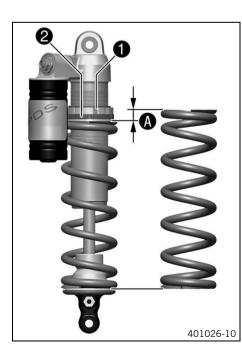

### Info

Depending on the static sag and/or the riding sag, it may be necessary to increase or decrease the spring preload.

# - Tighten screw 🚺.

Guideline

Screw, shock absorber adjusting ring	M5	5 Nm (3.7 lbf ft)
--------------------------------------	----	-------------------

#### **Finishing work**

- − Install the shock absorber. ◄ (♥ p. 44)
- Remove the motorcycle from the lift stand. (\* p. 37)

# 11.10 Adjusting the riding sag 🔧

#### **Preparatory work**

- Fold the seat up. (🕶 p. 45)
- After removing the shock absorber, clean it thoroughly.

#### Main work

Choose and mount a suitable spring.

Guideline	
Spring designation	
Weight of rider: 65 75 kg (143 165 lb.)	55/63/71-215
Weight of rider: 75 85 kg (165 187 lb.)	58/66/74-215
Weight of rider: 85 95 kg (187 209 lb.)	66-215

# Info

The spring rate is shown on the outside of the spring. Smaller weight differences can be compensated by changing the spring preload.

#### **Finishing work**

- Install the shock absorber. ◀ (♥ p. 44)

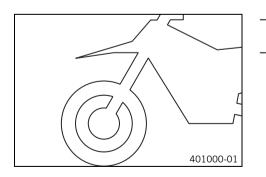

- Check the static sag of the shock absorber. (\* p. 32)
- Check the riding sag of the shock absorber. (\* p. 33)

# 11.11 Checking the basic setting of the fork

lnfo

For various reasons, no exact riding sag can be determined for the forks.

B00292-10

- As with the shock absorber, smaller differences in the rider's weight can be compensated by the spring preload.
- However, if the fork is often overloaded (hard end stop on compression), harder springs must be fit to avoid damage to the fork and frame.

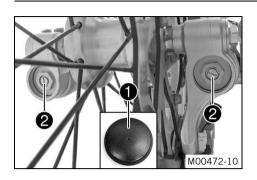

# **11 TUNING THE CHASSIS**

#### 11.12 Adjusting the compression damping of the fork

#### • Info

The hydraulic compression damping determines the fork suspension behavior.

Remove protection caps 1.

Turn adjusting screws 😢 clockwise all the way.

#### Info

Adjusting screws **2** are located at the bottom end of the fork legs. Make the same adjustment on both fork legs.

 Turn back counterclockwise by the number of clicks corresponding to the fork type. Guideline

Compression damping	
Comfort	25 clicks
Standard	20 clicks
Sport	15 clicks

#### Info

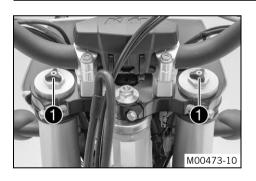

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

• Mount protection covers  $\mathbf{1}$ .

#### 11.13 Adjusting the rebound damping of the fork

#### • Info

The hydraulic rebound damping determines the fork suspension behavior.

- Turn adjusting screws 1 clockwise all the way.

#### Info

Adjusting screws **1** are located at the top end of the fork legs. Make the same adjustment on both fork legs.

 Turn back counterclockwise by the number of clicks corresponding to the fork type. Guideline

Rebound damping	
Comfort	25 clicks
Standard	20 clicks
Sport	15 clicks

#### lnfo

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

#### 11.14 Handlebar position

On the upper triple clamp, there are two holes at a distance of $igoplus$ to each other.		
Hole distance \Lambda 15 mm (0.59 in)		
The holes on the handlebar supports are placed at a distance of $oldsymbol{B}$ from the center.		
Hole distance <b>B</b> 3.5 mm (0.138 in)		

The handlebar supports can be mounted in four different positions.

# **11 TUNING THE CHASSIS**

#### 11.15 Adjusting the handlebar position 🔌

#### Warning

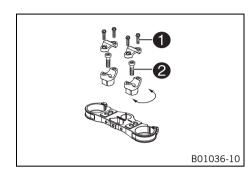

Danger of accidents Handlebar breakage.

\_

\_

\_

- If the handlebar is bent or straightened it will cause material fatigue, and the handlebar can break. Always replace handlebar.

Cover the component Do not bend the cabl	•	hem against dama	age.
Remove screws 😢. Take of	the handleb	ar supports.	
Move the handlebar supports screws <b>2</b> .	into the des	ired position. Mou	unt and tighten
Guideline			
Screw, handlebar support	M10	40 Nm (29.5 lbf ft)	Loctite <sup>®</sup> 243™
		(29.5 IDI IL)	
Position the left and	right handleb		
Position the left and	right handleb		
Info		ar supports evenly	y.
Position the left and Position the handlebar.	l wiring are p	ar supports evenly	y.

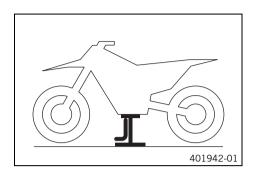

Remove screws 1. Remove the handlebar clamps. Take off the handlebar and lay

#### 12.1 Raising the motorcycle with the lift stand

#### Note

Danger of damage The parked vehicle may roll away or fall over.

Always place the vehicle on a firm and even surface.

- Raise the motorcycle at the frame underneath the engine.

Lift stand (54829055000)

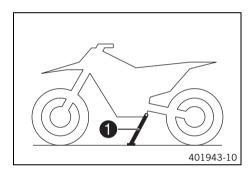

- ✓ Neither wheel is in contact with the ground.
- Secure the motorcycle against falling over.

#### 12.2 Removing the motorcycle from the lift stand

#### Note

Danger of damage The parked vehicle may roll away or fall over.

- Always place the vehicle on a firm and even surface.

- Remove the motorcycle from the lift stand.
- Remove the lift stand.
- To park the motorcycle, fold side stand 1 down to the ground with your foot and rest the motorcycle on it.

## • Info

While riding, the side stand must be folded up and secured with the rubber band.

#### 12.3 Bleeding the fork legs

#### Preparatory work

Raise the motorcycle with the lift stand. (\* p. 37)

#### Main work

\_

- Release bleeder screws 1.
- ✓ Any excess pressure escapes from the interior of the fork.
- Tighten the bleeder screws.

#### **Finishing work**

- Remove the motorcycle from the lift stand. (\* p. 37)

M00475-10

#### 12.4 Cleaning the dust boots of the fork legs

#### Preparatory work

- Raise the motorcycle with the lift stand. (\* p. 37)
- Remove the fork protector. (\* p. 39)

#### Main work

Push dust boots 1 of both fork legs downward.

#### Info

The dust boots remove dust and coarse dirt particles from the inside fork tubes. Over time, dirt can penetrate behind the dust boots. If this dirt is not removed, the shaft seal rings behind can start to leak.

#### Warning

- **Danger of accidents** Reduced braking efficiency due to oil or grease on the brake discs.
- Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.
- Clean and oil the dust boots and inner fork tube of both fork legs.

Universal oil spray (\* p. 106)

- Press the dust boots back into their normal position.
- Remove excess oil.

#### **Finishing work**

- Install the fork protector. (\* p. 40)

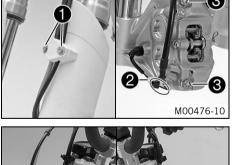

#### 12.5 Removing the fork legs 🔌

#### Preparatory work

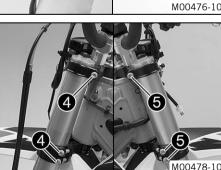

- − Remove the front wheel. ◀ (♥ p. 70)

#### Main work

- Remove screws 1 and take off the clamp.
- Remove the cable tie(s) and detach plug-in connector 2.
- $\cdot$  Remove screws  ${f 3}$  and the spacers and take off the brake caliper.
- Allow the brake caliper and brake line to hang tension-free to the side.

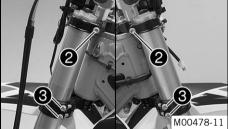

- Release screws 4. Take out the left fork leg.
- Release screws 6. Take out the right fork leg.

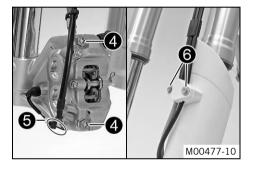

## 12.6 Installing the fork legs 🔌

Main work

- Position the fork legs.
  - Bleeder screws ① face forward.

#### lnfo

Grooves are milled into the side of the upper end of the fork legs. The second milled groove (from the top) must be flush with the top edge of the upper triple clamp.

#### · Tighten screws 2.

- (21)	Ido	lina
(1)	IUE.	line
~ ~		

\_

Screw, top triple clamp	M8	22 Nm (16.2 lbf ft)
-------------------------	----	------------------------

#### – Tighten screws 🕄.

Guideline		
Screw, bottom triple clamp	M8	18 Nm (13.3 lbf ft)

- Position the brake caliper. Mount and tighten screws 4 with the spacers.

Guio	

Screw, front brake caliper	M8	25 Nm (18.4 lbf ft)	Loctite <sup>®</sup> 243™

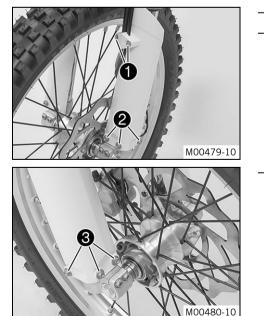

- Connect the plug-in connector **(5)** and mount the cable ties.
- Position the brake line, wiring harness, and clamp. Mount and tighten screws (6).

#### **Finishing work**

- Install the front wheel. A (

   p. 70)
- Check the headlight setting. (\* p. 80)

#### 12.7 Removing the fork protector

- Remove screws ①. Take off the clamp.
  - Remove screws 2 on the left fork leg. Take off the fork protector.

Remove screws 3 on the right fork leg. Take off the fork protector.

Position the fork protection on the right fork leg. Mount and tighten screws ①. Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
---------------------------	----	--------------------

Position the fork protection on the left fork leg. Mount and tighten screws **2**. Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
---------------------------	----	--------------------

- Position the brake line, wiring harness, and clamp. Mount and tighten screws 3.

#### 12.9 Removing the lower triple clamp 🔌

#### Preparatory work

- Raise the motorcycle with the lift stand. (\* p. 37)
- Remove the front wheel. 🔌 (🕶 p. 70)
- − Remove the fork legs. ◀ (♥ p. 38)
- Remove the front fender. (\* p. 44)

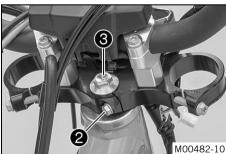

#### Main work

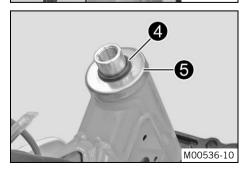

\_

\_

- Remove the cable holder 1 in front of the radiator.

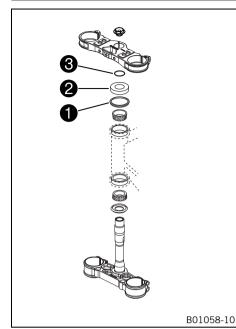

- Remove screw 2.
- Remove screw  ${f 3}$ , take off the upper triple clamp with the handlebar and set it aside.

Cover the components to protect them against damage. Do not bend the cables and lines.

- Remove O-ring **4**. Remove protective ring **5**.
  - Take out the lower triple clamp with the steering stem.
- Take out the upper steering head bearing.

#### 12.10 Installing the lower triple clamp 🔌

#### Main work

- Clean the bearing and sealing elements, check for damage, and grease.
  - High viscosity grease (\* p. 105)
- Insert the lower triple clamp with the steering stem. Mount the upper steering head bearing.
- Check whether the top steering head seal ① is correctly positioned.
- Slide on protective ring **2** and O-ring **3**.

- Position the upper triple clamp with the steering.
- Mount screw 4 but do not tighten yet.
- Position the clutch line and wiring harness.
- Position the fork legs.
  - Bleeder screws **5** face forward.

Grooves are milled into the side of the upper end of the fork legs. The second milled groove (from the top) must be flush with the top edge of the upper triple clamp.

#### Tighten screws 🙆.

#### Guideline

Screw, bottom triple clamp	M8	18 Nm
		(13.3 lbf ft)

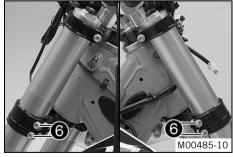

#### Tighten screw **4**.

Guideline

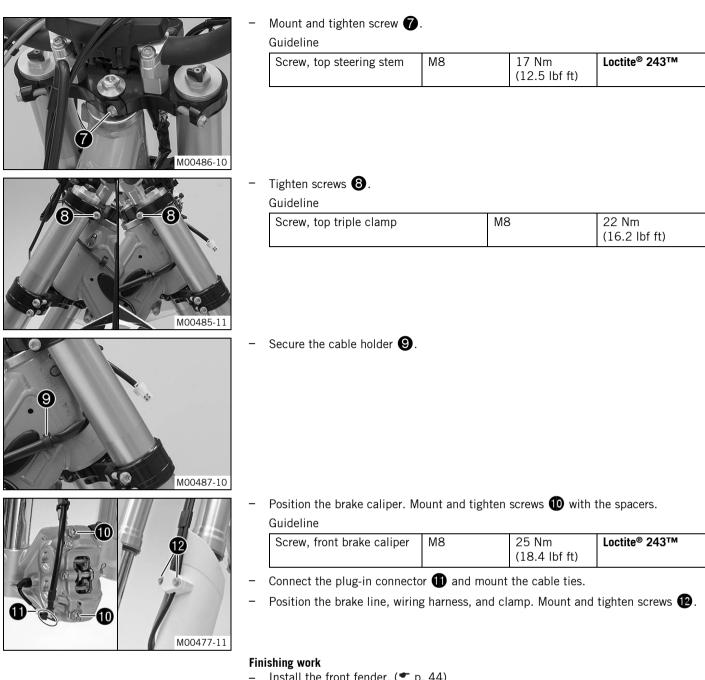

Screw, top steering head	M20x1.5	12 Nm (8.9 lbf ft)
--------------------------	---------	--------------------

M00483-10

- Install the front fender. (\* p. 44)
- Install the front wheel. 🔌 (🖛 p. 70)
- Refit the headlight mask with the headlight. (\* p. 78)
- Check that the wiring harness, cables, and brake and clutch lines can move freely \_ and are routed correctly.
- Check the steering head bearing play. (\* p. 42)
- Remove the motorcycle from the lift stand. (\* p. 37) \_
- Check the headlight setting. ( p. 80)

#### 12.11 Checking the steering head bearing play

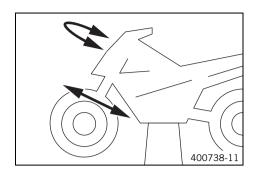

#### Warning

Info

**Danger of accidents** Unstable vehicle handling from incorrect steering head bearing play.

- Adjust the steering head bearing play without delay. (Your authorized KTM workshop will be glad to help.)

If the bike is ridden with play in the steering head bearing, the bearing and the bearing seats in the frame can become damaged over time.

#### **Preparatory work**

#### Main work

Move the handlebar to the straight-ahead position. Move the fork legs to and fro in the direction of travel.

No play should be noticeable in the steering head bearing.

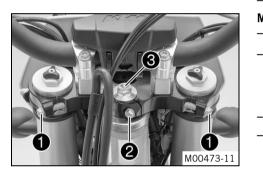

- » If there is noticeable play present:
  - Adjust the play of the steering head bearing. 🔌 (🕶 p. 43)
- Move the handlebar to and fro over the entire steering range.

The handlebar must be able to move easily over the entire steering range. No resting locations should be noticeable.

- » If click positions are noticeable:
  - Adjust the play of the steering head bearing. 🔌 (\* p. 43)
  - Check the steering head bearing and replace if required.

#### **Finishing work**

#### 12.12 Adjusting the play of the steering head bearing A

#### Preparatory work

Raise the motorcycle with the lift stand. (\* p. 37)

Main work

- Loosen screws 1. Remove screw 2.
- Loosen and retighten screw **3**.
  - Guideline

	Screw, top steering head	M20x1.5	12 Nm (8.9 lbf ft)
--	--------------------------	---------	--------------------

- Using a plastic hammer, tap lightly on the upper triple clamp to avoid strains.
- Tighten screws 🕦.

#### Guideline

Screw, top triple clamp	M8	22 Nm
		(16.2 lbf ft)

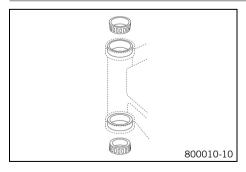

- Mount and tighten screw **2**.

(12.5 lbf ft)	Screw, top steering stem	M8	17 Nm (12.5 lbf ft)	Loctite <sup>®</sup> 243™
---------------	--------------------------	----	------------------------	---------------------------

#### **Finishing work**

- Remove the motorcycle from the lift stand. (\* p. 37)

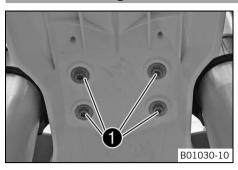

#### 12.13 Greasing the steering head bearing 🔌

- Remove the lower triple clamp. ◀ (♥ p. 40)
- Install the lower triple clamp. A (\* p. 41)

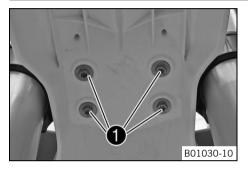

\_

#### 12.14 Removing the front fender

#### Remove screws 1. Remove the front fender.

#### 12.15 Installing the front fender

Position the front fender. Mount and tighten screws ①.
 Guideline

Remaining screws, chassis M6 10 Nm (7.4 lbf ft				
Make sure the holding lugs	engage in the headli	ght mask.

Repeat the operation on the opposite side.

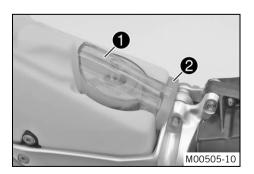

#### Finishing work

#### 12.22 Removing the air filter housing 🔧

#### Note

**Engine failure** Unfiltered intake air has a negative effect on the service life of the engine.

- Never operate the vehicle without an air filter as dust and dirt will enter the engine and lead to increased wear.

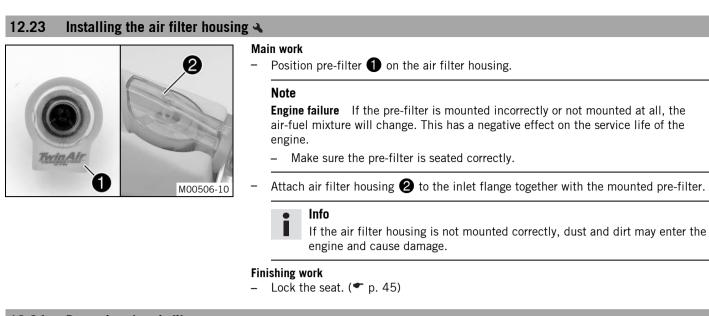

#### Preparatory work

- Fold the seat up. (🕶 p. 45)

#### Main work

- Pull off air filter housing **1** and pre-filter **2** toward the top.

3 Nm (2.2 lbf ft)

#### 12.24 Removing the air filter 🔧

#### Note

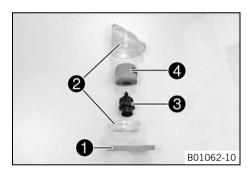

Engine failure Unfiltered intake air has a negative effect on the service life of the engine.

- Never operate the vehicle without an air filter as dust and dirt will enter the engine and lead to increased wear.

#### Warning Environme

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

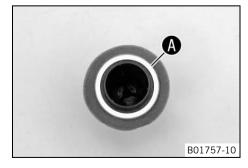

#### Preparatory work

- Fold the seat up. (\* p. 45)
- Remove the air filter housing. A (\* p. 46)

#### Main work

- Take off pre-filter 1.
- Open air filter housing (2) by turning counterclockwise and take out air filter (4) with air filter support (3).
- Take off air filter **4** from air filter support **3**.

#### 12.25 Installing the air filter 🔌

#### Main work

- Mount the clean air filter onto the air filter support.
- Apply grease to the air filter around area  $oldsymbol{A}$  .

Long-life grease (**\*** p. 105)

Insert both parts together and close air filter housing  $oldsymbol{0}$  by turning clockwise.

#### Info

If the air filter is not mounted correctly, dust and dirt may enter the engine and cause damage.

#### **Finishing work**

- Install the air filter housing. 🔌 (🕶 p. 47)
  - Lock the seat. (\* p. 45)

#### 12.26 Cleaning the air filter and air filter housing A

#### 🖌 Warning

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

**I**nfo

Do not clean the air filter with fuel or petroleum since these substances attack the foam.

#### Preparatory work

- Remove the air filter housing. 🔧 (🕶 p. 46)
- Remove the air filter. A (\* p. 47)

#### Main work

- Wash the air filter thoroughly in special cleaning liquid and allow it to dry properly.

Air filter cleaner (\* p. 105)

#### Info

Only press the air filter to dry it, never wring it out.

- Oil the dry air filter with a high quality filter oil.

Oil for foam air filter (\* p. 105)

- Clean the air filter housing.
- Check the intake flange for damage and ensure it is firmly seated.

#### **Finishing work**

- Install the air filter. 🔌 (🕶 p. 47)
- Install the air filter housing. 🔧 (🕶 p. 47)

#### 12.27 Removing the main silencer

## Warning

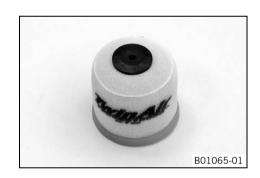

Danger of burns The exhaust system gets very hot when the vehicle is driven.

- Allow the exhaust system to cool down. Do not touch hot components.

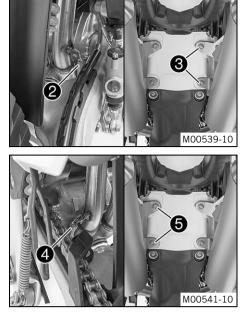

#### Remove the right main silencer:

- Take off the spoiler. (\* p. 45)
  - Info Only remove the right spoiler.
  - Disconnect connector 1 of the lambda sensor.

48

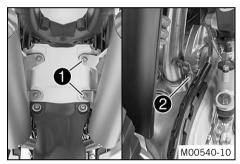

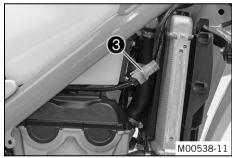

- Disconnect spring **2**.
- Remove screws 3 and take off the main silencer.

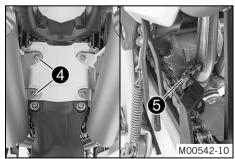

Remove the left main silencer:

- Disconnect spring **4**.
- Remove screws (5) and take off the main silencer.

#### Install the right main silencer:

- Position the main silencer. Mount screws 1 but do not tighten yet.
- Attach springs **2**.
- Tighten screws ①.
   Guideline
   Remaining screws.

Remaining screws, chassis	M8	25 Nm (18.4 lbf ft)

- Plug in connector 3 of the lambda sensor.

#### Install the left main silencer:

- Position the main silencer. Mount screws 4 but do not tighten yet.
- Attach springs **5**.
- Tighten screws 4.
   Guideline

Remaining screws, chassis	M8	25 Nm
		(18.4 lbf ft)

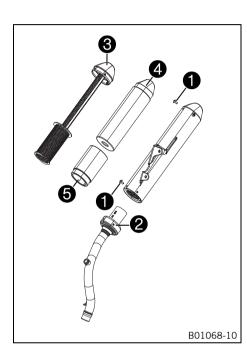

12.29 Changing the glass fiber yarn filling of the main silencer 🔌

#### Warning

- **Danger of burns** The exhaust system gets very hot when the vehicle is driven.
  - Allow the exhaust system to cool down. Do not touch hot components.

## Info

Over a period, the fibers of the glass fiber yarn vanish into the air, and the silencer "burns out". Not only is the noise level higher, the performance characteristic changes. The operations are the same for the left and right sides.

#### Preparatory work

Remove the main silencer. ( \* p. 48)

#### Main work

- Remove screws 1.
- Take off connecting cap (2).
- Remove the silencer cap **3** together with the perforated pipe and glass fiber yarn fillings **4** and **5**.
- Clean the parts that need to be reinstalled and check for damage.
- Mount the new glass fiber yarn fillings **4** and **5** on the perforated pipe. \_
- Position the silencer cap with the perforated pipe **3** in the outer tube.
- Position the connection cap **2**. \_
- Mount and tighten screws 1.

Guideline

Screws on the main silencer	M5	7 Nm (5.2 lbf ft)
-----------------------------	----	-------------------

#### **Finishing work**

Install the main silencer. (\* p. 49)

#### 12.30 Removing the fuel tank 🔌

#### Danger

Fire hazard Fuel is highly flammable.

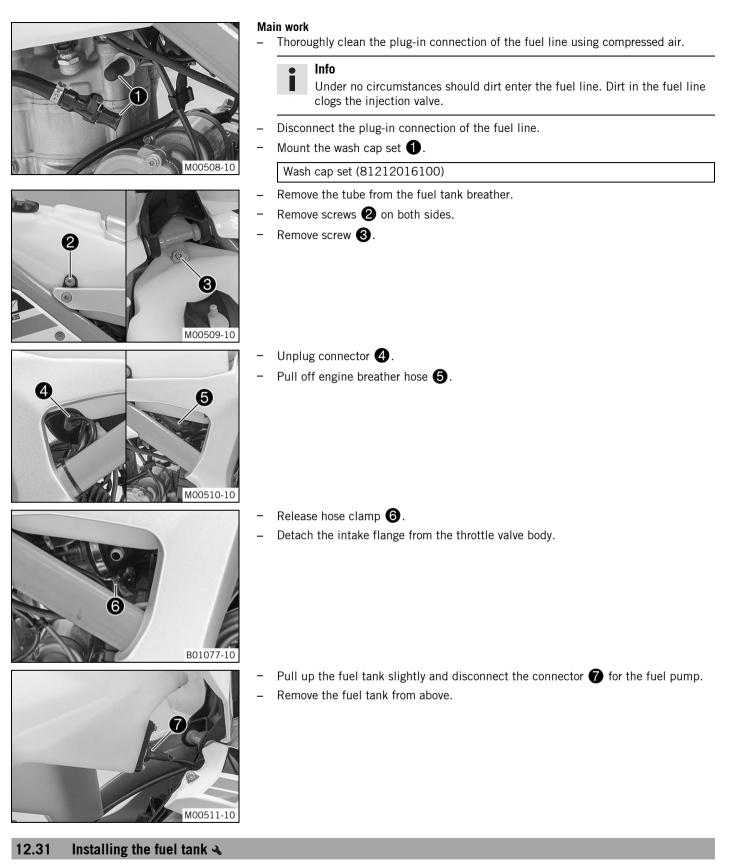

- Never refuel the vehicle near open flames or burning cigarettes, and always switch off the engine first. Be careful that no fuel is spilt, especially on hot vehicle components. Clean up spilt fuel immediately.
- The fuel in the fuel tank expands when warm and may emerge if overfilled. Follow the instructions on refueling.

## Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

Fuel must not come into contact with the skin, eyes, or clothing. Do not breathe in the fuel vapors. If contact occurs with the eyes, rinse with water immediately and contact a physician. Immediately clean contaminated areas on the skin with soap and water. If fuel is swallowed, contact a physician immediately. Change clothing that is contaminated with fuel. Store fuel properly in a suitable canister and keep away from children.

#### Preparatory work Fold the seat up. ( P. 45)

#### Danger

Fire hazard Fuel is highly flammable.

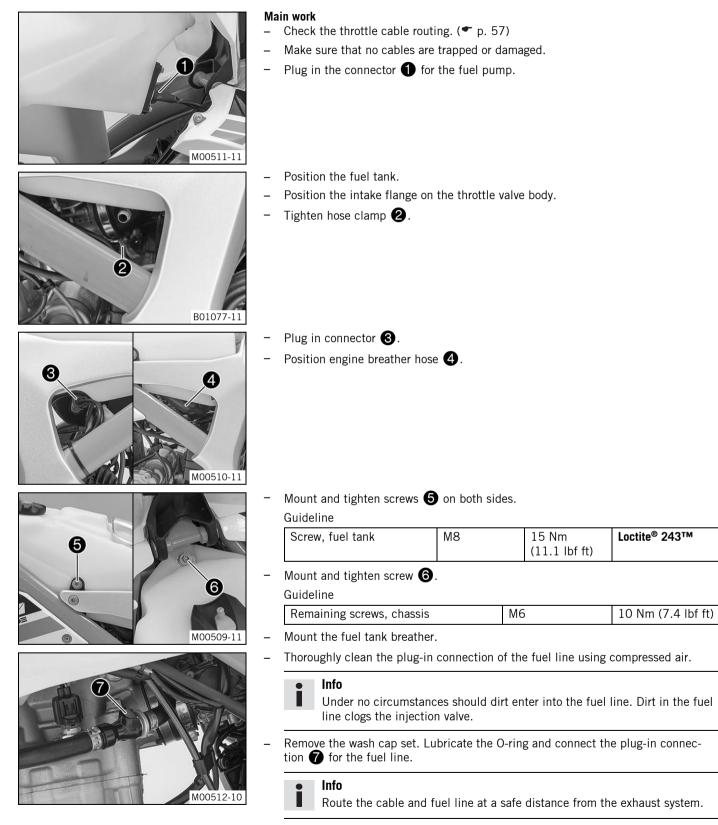

- Never refuel the vehicle near open flames or burning cigarettes, and always switch off the engine first. Be careful that no fuel is spilt, especially on hot vehicle components. Clean up spilt fuel immediately.
- The fuel in the fuel tank expands when warm and may emerge if overfilled. Follow the instructions on refueling.

#### Warning

Danger of poisoning Fuel is poisonous and a health hazard.

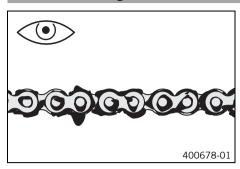

Fuel must not come into contact with the skin, eyes, or clothing. Do not breathe in the fuel vapors. If contact occurs with the eyes, rinse with water immediately and contact a physician. Immediately clean contaminated areas on the skin with soap and water. If fuel is swallowed, contact a physician immediately. Change clothing that is contaminated with fuel.

#### Finishing work

- Lock the seat. (\* p. 45)

#### 12.32 Checking for chain dirt accumulation

- Check the chain for coarse dirt accumulation.
- » If the chain is very dirty:
  - Clean the chain. (\* p. 53)

#### 12.33 Cleaning the chain

#### Warning

Danger of accidents Oil or grease on the tires reduces their grip.

- Remove oil and grease with a suitable cleaning material.

#### Warning

Warning

Danger of accidents Reduced braking efficiency due to oil or grease on the brake discs.

- Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.

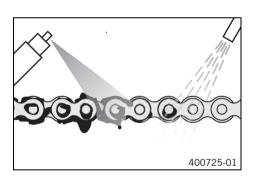

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

Info

The service life of the chain depends largely on its maintenance.

#### Preparatory work

#### Main work

- Clean the chain regularly and then treat with chain spray.

Chain cleaner (\* p. 105) Off-road chain spray (\* p. 105)

#### **Finishing work**

Remove the motorcycle from the lift stand. (\* p. 37)

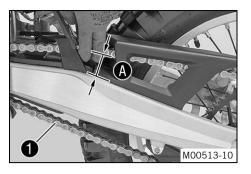

#### 12.34 Checking the chain tension

### Warning

Danger of accidents Danger caused by incorrect chain tension.

If the chain is too taut, the components of the secondary power transmission (chain, engine sprocket, rear sprocket, bearings in the transmission and in the rear wheel) will be under additional load. In addition to premature wear, this can cause the chain or the countershaft of the transmission to break in extreme cases. If the chain is too loose, however, it may fall off the engine sprocket or rear sprocket and block the rear wheel or damage the engine. Ensure that the chain tension is correct and adjust it if necessary.

#### Preparatory work

#### Main work

Pull the chain at the end of the chain sliding component upwards to measure chain tension  $oldsymbol{A}$ .

#### Info

The lower chain section 1 must be taut.

Chain wear is not always even, so you should repeat this measurement at different chain positions.

Chain tension 36 40 mm (1.42 1.57 in)	Chain tension	
---------------------------------------	---------------	--

If the chain tension does not meet specifications:

#### **Finishing work**

#### 12.35 Adjusting the chain tension

#### Warning

Danger of accidents Danger caused by incorrect chain tension.

If the chain is too taut, the components of the secondary power transmission (chain, engine sprocket, rear sprocket, bearings in the transmission and in the rear wheel) will be under additional load. In addition to premature wear, this can cause the chain or the countershaft of the transmission to break in extreme cases. If the chain is too loose, however, it may fall off the engine sprocket or rear sprocket and block the rear wheel or damage the engine. Ensure that the chain tension is correct and adjust it if necessary.

#### Main work

\_

- Loosen nut **1**.
- Loosen nuts 2.
- Adjust the chain tension by turning adjusting screws ③ on the left and right.
   Guideline

Chain tension 36 40 mm (1.42 1.57 in)				
Turn adjusting screws 3 on the left and left and left and right chain adjusters are in the s				
marks (A). The rear wheel is then correctly aligned.				

- Tighten nuts 2.
- Make sure that chain adjusters 4 are fitted correctly on adjusting screws 3.
  - Tighten nut 🚺.

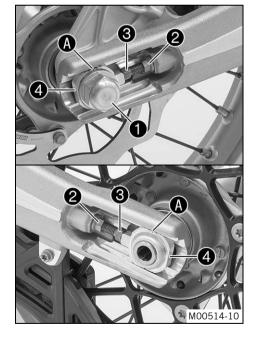

#### Guideline

|--|

#### • Info

The wide adjustment range of the chain adjusters enables different secondary ratios with the same chain length. Chain adjusters 4 can be turned by 180°.

#### **Finishing work**

400227-01

0000000000

#### 12.36 Checking the chain, rear sprocket, engine sprocket and chain guide

#### Preparatory work

- Raise the motorcycle with the lift stand. (\* p. 37)

#### Main work

- Shift gear to neutral.
- Check the rear sprocket and engine sprocket for wear.
  - » If the rear sprocket and engine sprocket are worn:
    - Change the drivetrain kit. 🔌

The engine sprocket, rear sprocket and chain should always be

replaced together.

Pull on the upper part of the chain with the specified weight A.
 Guideline

 Weight, chain wear measurement
 10... 15 kg (22... 33 lb.)

- Measure the distance  $\mathbf{B}$  of 18 chain links in the lower chain section.

Chain wear is not always even, so you should repeat this measurement at different chain positions.

Maximum distance (B) at the longest 272 mm (10.71 in)

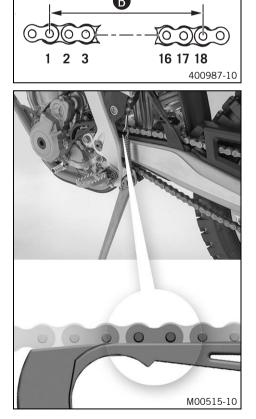

- » If the distance **B** is greater than the specified measurement:
  - Change the drivetrain kit. 🔌

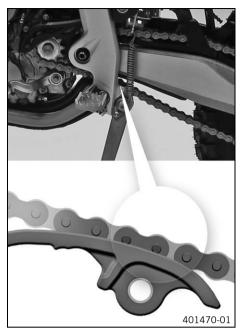

Info When the chain is replaced, the rear sprocket and engine sprocket should also be changed. New chains wear out faster on old, worn sprockets.

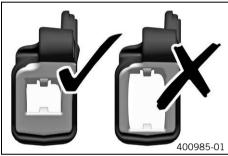

- Check the chain sliding guard for wear.
  - » If the bottom edge of the chain bolt is in line with or below the chain sliding guard:
    - Change the chain sliding guard. 🔧
- Check that the chain sliding guard is firmly seated.
  - If the chain sliding guard is loose:
  - Tighten the chain sliding guard.

#### Guideline

Remaining screws, chassis	M6	10 Nm
_		(7.4 lbf ft)

- Check the chain sliding piece for wear.
  - If the bottom edge of the chain bolt is in line with or below the chain sliding » piece:
    - Change the chain sliding piece. 🔌
- Check that the chain sliding piece is firmly seated.
  - If the chain sliding piece is loose: »
    - Tighten the chain sliding piece. \_

Guideline

Screw, chain sliding piece	M8	15 Nm
		(11.1 lbf ft)

Check the chain guide for wear.

Info

Wear can be seen on the front of the chain guide.

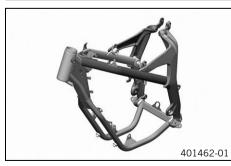

- If the light part of the chain guide is worn:
  - Change the chain guide. 🔌 \_
- Check that the chain guide is firmly seated.
  - » If the chain guide is loose:
    - Tighten the chain guide. \_

Guideline		
Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
Remaining nuts, chassis	M6	10 Nm (7.4 lbf ft)

#### **Finishing work**

Remove the motorcycle from the lift stand. (\* p. 37) \_

#### 12.37 Checking the frame A

- Check the frame for cracking and deformation.
  - If the frame exhibits cracking or deformation due to a mechanical impact:
    - Change the frame. 🔧

## Info

A frame that has been damaged due to a mechanical impact must be replaced. Repair of the frame is not authorized by KTM.

# 

Checking the swingarm 🔌

12.38

- Check the swingarm for damage, cracking, and deformation.
  - » If the swingarm shows signs of damage, cracking, or deformation:
    - Change the swingarm. 🔧

Info

A damaged swingarm must always be changed. Repair of the swingarm is not authorized by KTM.

#### 12.39 Checking the throttle cable routing

- Fold the seat up. (\* p. 45)
- Remove the fuel tank. 🔌 (🕶 p. 50)

#### Main work

Check the throttle cable routing.

Both throttle cables must be routed to the throttle valve body side by side behind the handlebars and below the seat fixing.

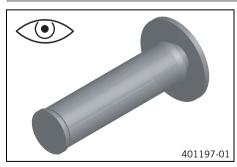

- » If the throttle cable is not routed as specified:
  - Correct the throttle cable routing.

#### **Finishing work**

M00516-01

- Install the fuel tank. 🔧 (🕶 p. 51)
- Lock the seat. (🕶 p. 45)

#### 12.40 Checking the rubber grip

- Check the rubber grips on the handlebar for damage and wear and to ensure they are firmly seated.
  - » If a rubber grip is damaged, worn, or loose:
    - Change and secure the rubber grip.

Rubber grip adhesive (00062030051) (\* p. 105)

#### 12.41 Additionally securing the rubber grip

# 401198-01

Check the rubber grip. ( P. 57)

#### Main work

\_

Preparatory work

Secure the rubber grip at two points using the securing wire.

#### Securing wire (54812016000)

Wire twister forceps (U6907854)

The twisted wire ends face away from the hands and are bent toward the rubber grip.

Adjust the basic position of the clutch lever to your hand size by turning adjusting

#### 12.42 Adjusting the basic position of the clutch lever

# screw ①.

When the adjusting screw is turned clockwise, the clutch lever moves away from the handlebar.
When the adjusting screw is turned counterclockwise, the clutch lever moves closer to the handlebar.
The range of adjustment is limited.
Turn the adjusting screw by hand only, and do not apply force.
Do not make any adjustments while riding!

#### 12.43 Checking fluid level of the hydraulic clutch

#### • Info

The fluid level rises with increasing wear of the clutch facing discs.

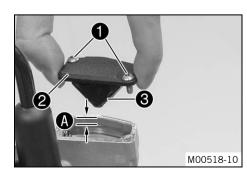

- Move the clutch fluid reservoir mounted on the handlebar into a horizontal position.
  - Check the fluid level in viewer  $oldsymbol{1}$  .
    - If the fluid has dropped below marking in the level viewer:
       Correct the fluid level of the hydraulic clutch. (\* p. 58)

#### 12.44 Correcting the fluid level of the hydraulic clutch

• Info

The fluid level rises with increasing wear of the clutch facing discs.

- Move the clutch fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws 1.
- Remove cover **2** with membrane **3**.
- Add fluid to level A.
  - Guideline Level (fluid level below container 4 mm (0.16 in)

rim) Brake fluid DOT 4 / DOT 5.1 (\* p. 103)

- Position the cover with the membrane. Mount and tighten the screws.

Info

Clean up overflowed or spilt brake fluid immediately with water.

Move the clutch fluid reservoir mounted on the handlebar to a horizontal position.

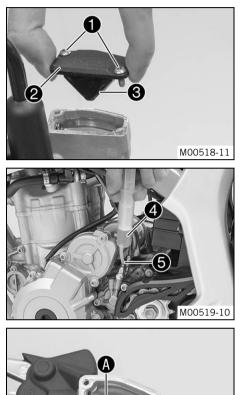

#### Warning

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

Remove cover **2** with membrane **3**.

Remove screws 1.

- Fill bleeding syringe 4 with the appropriate hydraulic fluid.

Bleed syringe (50329050000) Brake fluid DOT 4 / DOT 5.1 ( p. 103)

- On the clutch slave cylinder, remove bleeder screw **(5)** and mount bleeding syringe **(4)**.
- Inject the liquid into the system until it escapes from opening (A) of the master cylinder without bubbles.
- To prevent overflow, drain fluid occasionally from the master cylinder reservoir.
- Remove the bleeding syringe. Mount and tighten screws bleeder screw.
- Correct the fluid level of the hydraulic clutch.

Guideline

M00520-10

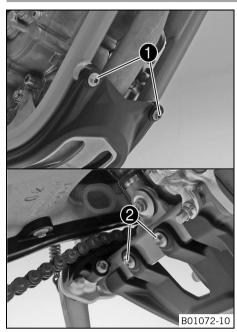

Fluid level below container rim	4 mm (0.16 in)
---------------------------------	----------------

- Position the cover with the membrane. Mount and tighten the screws.

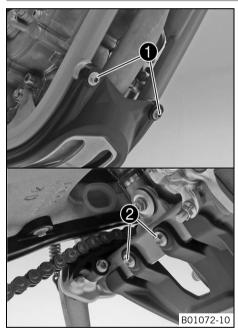

\_

\_

#### 12.46 Removing the engine guard

#### 12.47 Installing the engine guard

- Position the engine guard on the frame at the rear and mount and tighten screws 2.

Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
---------------------------	----	--------------------

#### – Tighten screws **1**.

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
---------------------------	----	--------------------

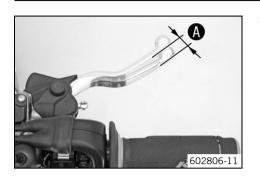

- Remove screws **1** and **2**.
- Lower the engine guard at the rear and remove it toward the front.

13.1

Warning **Danger of accidents** Brake system failure.

Checking the free travel of the hand brake lever

If there is no free travel on the hand brake lever, pressure builds up on the front brake circuit. The front brake can fail due to overheating. Adjust the free travel on hand brake lever according to specifications.

-	Push the hand brake to the handlebar and	I check free travel A.
	Free travel of hand brake lever	≥ 3 mm (≥ 0.12 in)

If the free travel does not meet specifications:

Adjust the free travel of the handbrake lever. (\* p. 61)

13.2 Adjusting the free travel of the handbrake lever

- Check the free travel of the hand brake lever. (\* p. 61)
- Adjust the free travel of the handbrake lever with adjustment screw 1.

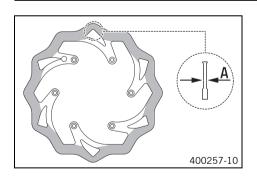

•	1110
	When the adjusting screw is turned clockwise, the free travel decreases. The
	pressure point moves away from the handlebar.
	When the adjusting screw is turned counterclockwise, the free travel
	increases. The pressure point moves towards the handlebar.
	The range of adjustment is limited.
	Turn the adjusting screw by hand only, and do not apply force.
	Do not make any adjustments while riding!

#### 13.3 Checking the brake discs

## Warning

**Danger of accidents** Reduced braking efficiency due to worn brake disc(s).

Change the worn brake disc(s) without delay. (Your authorized KTM workshop will be glad to help.)

Check the thickness of the front and rear brake discs at several places on the disk to see if it conforms to measurement **A**.

#### Info

»

Wear reduces the thickness of the brake disc around the area used by the brake linings.

Brake discs - wear limit	
Front	2.5 mm (0.098 in)
Rear	3.5 mm (0.138 in)

- If the brake disc thickness is less than the specified value:
- Change the brake disc.
- Check the front and rear brake discs for damage, cracking and deformation.
  - If the brake disc shows signs of damage, cracking, or deformation: »
    - Change the brake disc.

## 4 Checking the brake fluid level of the front brake

## Warning

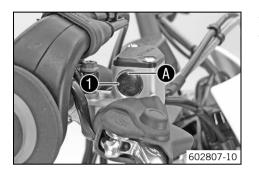

Warning

Danger of accidents Brake system failure.

 If the brake fluid level drops below the specified marking or the specified value, this is an indication that the brake system is leaking or that the brake linings are completely worn down. Check the brake system and do not continue riding. (Your authorized KTM workshop will be glad to help.)

Danger of accidents Reduced braking efficiency due to old brake fluid.

 Change the brake fluid of the front and rear brake according to the service schedule. (Your authorized KTM workshop will be glad to help.)

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
  - Check the brake fluid level in the viewer ①.
    - If the brake fluid has dropped below marking  $oldsymbol{A}$  :
    - Add front brake fluid. ◀ (♥ p. 62)

#### 13.5 Adding front brake fluid 🔌

## Warning

Danger of accidents Brake system failure.

 If the brake fluid level drops below the specified marking or the specified value, this is an indication that the brake system is leaking or that the brake linings are completely worn down. Check the brake system and do not continue riding. (Your authorized KTM workshop will be glad to help.)

#### Warning

Skin irritation Brake fluid can cause skin irritation on contact.

- Avoid contact with skin and eyes, and keep out of the reach of children.
- Wear suitable protective clothing and goggles.
- If brake fluid comes into contact with the eyes, flush the eyes thoroughly with water and consult a physician immediately.

#### Warning

Danger of accidents Reduced braking efficiency due to old brake fluid.

 Change the brake fluid of the front and rear brake according to the service schedule. (Your authorized KTM workshop will be glad to help.)

Warning

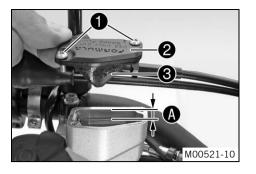

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

#### Info

Never use DOT 5 brake fluid! It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint! Use only clean brake fluid from a sealed container.

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- 🕆 Remove screws 🚺.
- Remove cover **2** with membrane **3**.
- Add brake fluid to level A.
   Guideline
   Level A (brake fluid level below container rim)
   Brake fluid DOT 4 / DOT 5.1 (\* p. 103)
- Position the cover with the membrane. Mount and tighten the screws.

• Info

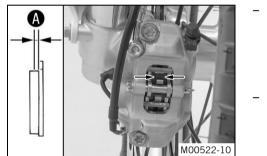

Clean up overflowed or spilt brake fluid immediately with water.

#### 13.6 Checking the front brake linings

Warning

Danger of accidents Reduced braking efficiency caused by worn brake linings.

- Change worn brake linings immediately. (Your authorized KTM workshop will be glad to help.)

#### Check the brake linings for minimum thickness (A).

Minimum thickness 🚯	≥ 1 mm (≥ 0.04 in)		
» If the minimum thickness is less than specified:			
– Change the front brake linings. 🔌 (🕿 p. 63)			
Check the brake linings for damage	and cracking		

- Check the brake linings for damage and cracking.
- » If damage or cracking is visible:

#### 13.7 Changing the front brake linings 🔌

Danger of accident Brake system failure.

- Maintenance work and repairs must be carried out professionally. (Your authorized KTM workshop will be glad to help.)

#### Warning

Warning

Skin irritation Brake fluid can cause skin irritation on contact.

- Avoid contact with skin and eyes, and keep out of the reach of children.
- Wear suitable protective clothing and goggles.
- If brake fluid comes into contact with the eyes, flush the eyes thoroughly with water and consult a physician immediately.

#### Warning

Danger of accidents Reduced braking efficiency due to old brake fluid.

 Change the brake fluid of the front and rear brake according to the service schedule. (Your authorized KTM workshop will be glad to help.)

#### Warning

Danger of accidents Reduced braking efficiency due to oil or grease on the brake discs.

- Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.

#### Warning

Danger of accidents Reduced braking efficiency due to use of non-approved brake linings.

Brake linings available from accessory suppliers are often not tested and approved for use on KTM vehicles. The construction and friction factor of the brake linings and therefore the brake power can differ considerably from the original KTM brake linings. If brake linings are used that differ from the originals, there is no guarantee that they comply with the original license. The vehicle no longer corresponds to the condition at delivery, and the warranty is no longer valid.

Warning

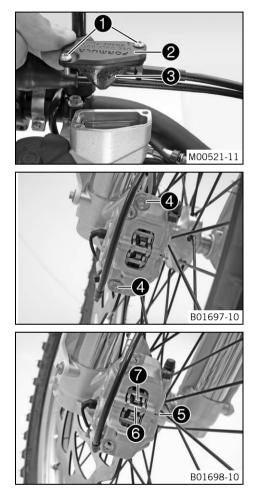

**Environmental hazard** Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

## Info

Never use DOT 5 brake fluid! It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint! Use only clean brake fluid from a sealed container.

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws 1
- Remove cover **2** with membrane **3**.
- Remove screws **4** and spacers.
- Press back the brake linings with a light lateral tilting of the brake caliper on the brake disc. Carefully pull the brake caliper backwards from the brake disc..
- Press the brake piston back to its basic position and make sure that no brake fluid overflows from the brake fluid reservoir.
- Remove cotter pin **6**.
- Remove pin 6.
- Take off retaining spring **7** and remove the brake linings.
- Clean the brake caliper.
- Position the new brake linings. \_

#### Info

Always change the full set of brake linings.

- Position retaining spring  $\mathbf{7}$ .
- Mount bolt 6.

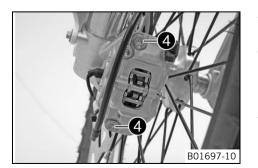

## Info

To make it easier to mount the pin, push the retainer spring down. Make sure the retaining spring is seated correctly.

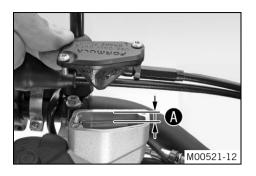

- Mount cotter pin **5**.
- Position the brake caliper. Mount screws 4 with the spacers but do not tighten vet.
- Operate the hand brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point. Fix the hand brake lever in the activated position.
  - ✓ The brake caliper straightens.
- Tighten screws **4**.

#### Guideline

Screw, front brake caliper	M8	25 Nm	Loctite <sup>®</sup> 243™
		(18.4 lbf ft)	

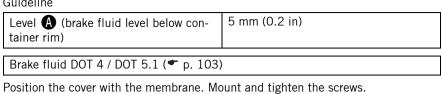

- Remove the fixation of the hand brake lever.
  - Add brake fluid to level (A).

#### Guideline

Info

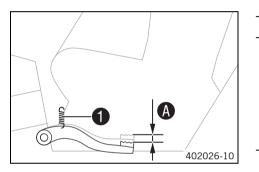

Clean up overflowed or spilt brake fluid immediately with water.

#### 13.8 Checking the free travel of foot brake lever

## Warning

Danger of accidents Brake system failure.

If there is no free travel on the foot brake lever, pressure builds up on the rear brake circuit. The rear brake can fail due to overheating. Adjust the free travel on foot brake lever according to specifications.

- Disconnect spring 1.
- Move the foot brake lever back and forth between the end stop and the contact to the foot brake cylinder piston and check free travel (A).

Guideline

Free travel at foot brake lever	3 5 mm (0.12 0.2 in)			
» If the free travel does not meet specifications:				
<ul> <li>Adjust the basic position of the foot brake lever. A (* p. 65)</li> </ul>				

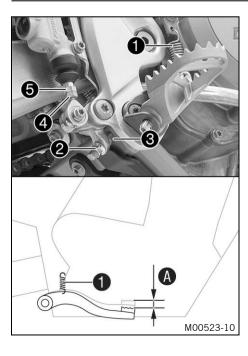

Reconnect spring 1.

#### 13.9 Adjusting the basic position of the foot brake lever 🔌

## Warning

Danger of accidents Brake system failure.

If there is no free travel on the foot brake lever, pressure builds up on the rear brake circuit. The rear brake can fail due to \_ overheating. Adjust the free travel on foot brake lever according to specifications.

- Disconnect spring **1**.
- Loosen nut 4 and, with push rod 5, turn it back until you have maximum free travel
- To adjust the basic position of the foot brake lever individually, loosen nut **2** and turn screw **3** accordingly.

#### Info

The range of adjustment is limited.

Turn push rod **5** accordingly until you have free travel **A**. If necessary, adjust the basic position of the foot brake lever.

Guideline

\_

Free travel at foot brake lever	3 5 mm (0.12 0.2 in)
---------------------------------	----------------------

Hold screw 3 and tighten nut 2. Guideline

Nut, foot brake lever stop	M8	20 Nm (14.8 lbf ft)
----------------------------	----	------------------------

Hold push rod **5** and tighten nut **4**. Guideline

	Remaining nuts, chassis	M6	10 Nm (7.4 lbf ft)
--	-------------------------	----	--------------------

#### Reconnect spring 1.

#### 13.10 Checking the rear brake fluid level

#### Warning

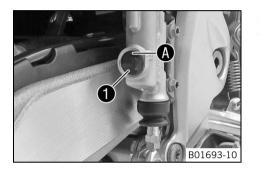

Danger of accidents Brake system failure.

 If the brake fluid level drops below the specified marking or the specified value, this is an indication that the brake system is leaking or that the brake linings are completely worn down. Check the brake system and do not continue riding. (Your authorized KTM workshop will be glad to help.)

#### Warning

Danger of accidents Reduced braking efficiency due to old brake fluid.

 Change the brake fluid of the front and rear brake according to the service schedule. (Your authorized KTM workshop will be glad to help.)

- Stand the vehicle upright.
- Check the brake fluid level in the viewer ①.
  - » If the brake fluid level drops below marking A:
     Add rear brake fluid. ◄ (♥ p. 66)

#### 13.11 Adding rear brake fluid 🔧

Danger of accidents Brake system failure.

 If the brake fluid level drops below the specified marking or the specified value, this is an indication that the brake system is leaking or that the brake linings are completely worn down. Check the brake system and do not continue riding. (Your authorized KTM workshop will be glad to help.)

#### Warning

Warning

Skin irritation Brake fluid can cause skin irritation on contact.

- Avoid contact with skin and eyes, and keep out of the reach of children.
- Wear suitable protective clothing and goggles.
- If brake fluid comes into contact with the eyes, flush the eyes thoroughly with water and consult a physician immediately.

#### Warning

Danger of accidents Reduced braking efficiency due to old brake fluid.

 Change the brake fluid of the front and rear brake according to the service schedule. (Your authorized KTM workshop will be glad to help.)

Warning

**Environmental hazard** Hazardous substances cause environmental damage.

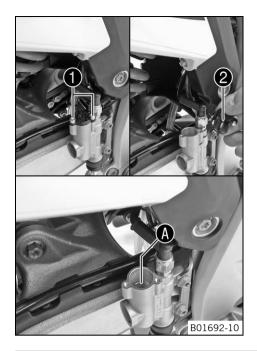

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

#### Info

Never use DOT 5 brake fluid! It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint! Use only clean brake fluid from a sealed container.

#### Preparatory work

#### Main work

- Stand the vehicle upright.
- Remove screws 1.
- Remove cover with membrane **2**.
- Add brake fluid to level 🚯

Brake fluid DOT 4 / DOT 5.1 (\* p. 103)

- Position the cover with the membrane.
- Mount and tighten the screws.

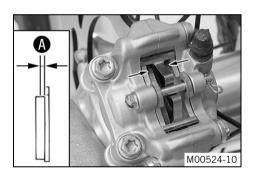

Clean up overflowed or spilt brake fluid immediately with water.

#### 13.12 Checking the rear brake linings

#### Warning

Danger of accidents Reduced braking efficiency caused by worn brake linings.

Change worn brake linings immediately. (Your authorized KTM workshop will be glad to help.)

Check the brake linings for minimum thickness (A).

	Minimum thickness	≥ 1 mm (≥ 0.04 in)	
» If the minimum thickness is less than specified:			
	– Change the rear brake linings. 🔦 (	<b>•</b> p. 67)	
•	Check the brake linings for damage and cracking.		

- » If damage or cracking is visible:
  - Change the rear brake linings. A (\* p. 67)

#### 13.13 Changing the rear brake linings 🔌

#### Warning

Danger of accident Brake system failure.

- Maintenance work and repairs must be carried out professionally. (Your authorized KTM workshop will be glad to help.)

#### Warning

Skin irritation Brake fluid can cause skin irritation on contact.

- Avoid contact with skin and eyes, and keep out of the reach of children.
- Wear suitable protective clothing and goggles.
- If brake fluid comes into contact with the eyes, flush the eyes thoroughly with water and consult a physician immediately.

#### Warning

Danger of accidents Reduced braking efficiency due to old brake fluid.

 Change the brake fluid of the front and rear brake according to the service schedule. (Your authorized KTM workshop will be glad to help.)

#### Warning

Danger of accidents Reduced braking efficiency due to oil or grease on the brake discs.

- Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.

#### Warning

Danger of accidents Reduced braking efficiency due to use of non-approved brake linings.

Brake linings available from accessory suppliers are often not tested and approved for use on KTM vehicles. The construction and friction factor of the brake linings and therefore the brake power can differ considerably from the original KTM brake linings. If brake linings are used that differ from the originals, there is no guarantee that they comply with the original license. The vehicle no longer corresponds to the condition at delivery, and the warranty is no longer valid.

#### Warning

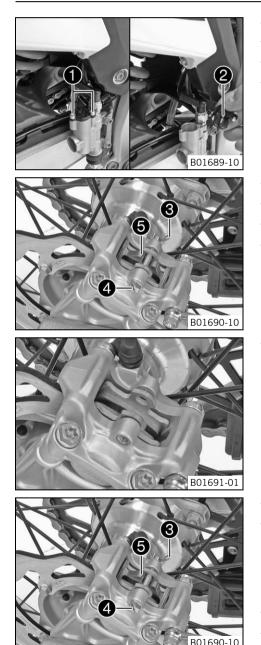

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

### Info

Never use DOT 5 brake fluid! It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint! Use only clean brake fluid from a sealed container.

- Stand the vehicle upright.
- Remove screws 1.
- Remove cover with membrane 2.
- Press the brake piston back to its basic position and make sure that no brake fluid overflows from the brake fluid reservoir.
- Remove cotter pins 3.
- Remove pins 🖪.
- Take off retaining spring **6** and remove the brake linings.
- Clean the brake caliper.
- Position the new brake linings.

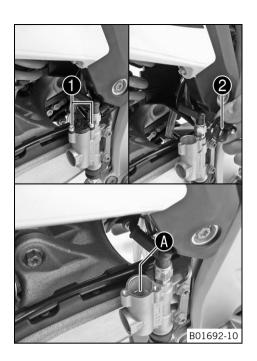

Always change the full set of brake linings.

- Position retaining spring **5**.
- Mount bolt **4**.

To make it easier to mount the pin, push the retainer spring down. Make sure the retaining spring is seated correctly.

- Mount cotter pin 🚯.
- Operate the foot brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point.

- Add brake fluid to level (A).

Brake fluid DOT 4 / DOT 5.1 (\* p. 103)

- Position the cover with the membrane **2**.
- Mount and tighten screws **①**.

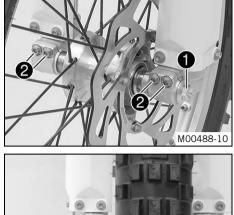

#### • Info Clea

\_

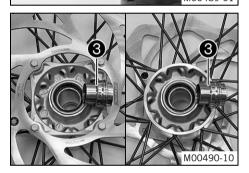

Clean up overflowed or spilt brake fluid immediately with water.

## 14 WHEELS, TIRES

## 14.1 Removing the front wheel 🔌

#### Preparatory work

- Raise the motorcycle with the lift stand. (\* p. 37)

#### Main work

\_

- Loosen screw 1 by several rotations.
  - Release screws 2.
  - Press on screw 1 to push the wheel spindle on the axle clamp.
- Remove screw 1.
- Holding the front wheel, withdraw the wheel spindle. Take the front wheel out of the fork.

Do not pull the hand brake lever when the front wheel is removed. Always lay the wheel down in such a way that the brake disc is not damaged.

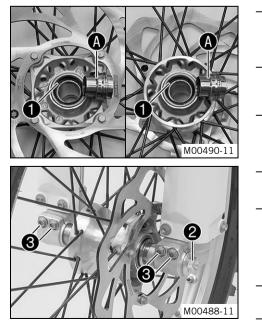

Remove spacers 3.

#### 14.2 Installing the front wheel A

#### Warning

Danger of accidents Reduced braking efficiency due to oil or grease on the brake discs.

- Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.

- Check the wheel bearing for damage and wear.
- If the wheel bearing is damaged or worn:
  - Change the front wheel bearing.
- $\cdot$  Clean and grease the shaft seal rings igoplus and contact surface igoplus of the spacers.

Long-life grease (\* p. 105)

Insert the spacers.

- Position the front wheel and insert the wheel spindle.
- ✓ The brake linings are correctly positioned.
- Mount and tighten screw **2**.

Guideline		
Screw, front wheel spindle	M20x1.5	35 Nm (25.8 lbf ft)

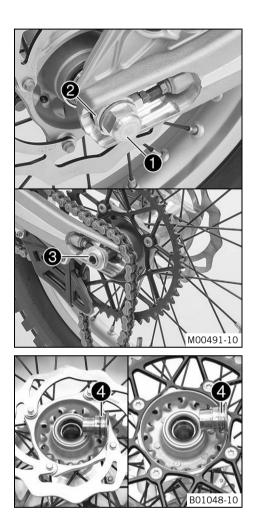

- Activate the hand brake lever multiple times until the brake linings are in contact with the brake disc.
- Remove the motorcycle from the lift stand. (\* p. 37)

#### WHEELS, TIRES 14

- \_
  - ✓ The fork legs straighten.
- Tighten screw **3**.

Screw, fork stub	M8	15 Nm (11.1 lbf ft)
------------------	----	------------------------

#### 14.3 Removing the rear whee

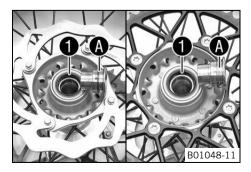

#### 14.4 Installing the rear wheel 🔌

#### Warning

\_

Danger of accidents Reduced braking efficiency due to oil or grease on the brake discs.

Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.

#### Main work

Check the wheel bearing for damage and wear.

- » If the wheel bearing is damaged or worn:
  - Change the rear wheel bearing. 🔧 \_
- Clean and grease the shaft seal rings **1** and contact surface **A** of the spacers.

### Long-life grease (\* p. 105)

Insert the spacers.

#### Pull the front brake and compress the fork forcefully a few times.

#### Guideline

	Preparatory work		
el 🔌			
			(11.1

Raise the motorcycle with the lift stand. ( p. 37) \_

### Main work

- \_ Remove nut 1.
- Remove chain adjuster **2**.
- Withdraw wheel spindle **3** only enough to allow the rear wheel to be pushed forward.
- Push the rear wheel forward as far as possible. Remove the chain from the rear sprocket.

Cover the components to protect them against damage.

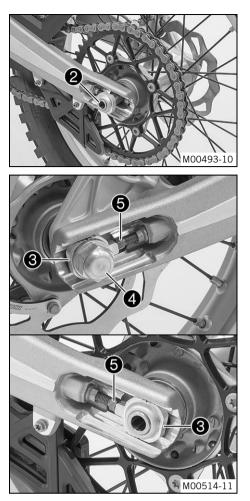

Holding the rear wheel, withdraw the wheel spindle. Take the rear wheel out of the swing arm.

### Info

Do not operate the foot brake when the rear wheel is removed. Always lay the wheel down in such a way that the brake disc is not damaged.

Remove spacers 4.

## 14 WHEELS, TIRES

- Lift the rear wheel into the swingarm, position it, and insert wheel spindle  $oldsymbol{2}$  .
- Put the chain on.
  - ✓ The brake linings are correctly positioned.
- Position chain adjuster 3. Mount nut 4, but do not tighten it yet.
- Make sure that chain adjusters 3 are fitted correctly on adjusting screws 5.
- Check the chain tension. (\* p. 53)
- Tighten nut 4.

#### Guideline

Nut, rear wheel spindle	M20x1.5	80 Nm (59 lbf ft)

#### Info

- The wide adjustment range of the chain adjusters enables different secondary ratios with the same chain length. Chain adjusters ③ can be turned by 180°.
- Operate the foot brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point.

#### **Finishing work**

- Remove the motorcycle from the lift stand. (\* p. 37)

### 14.5 Checking the tire condition

#### • Info

Only mount tires approved and/or recommended by KTM.

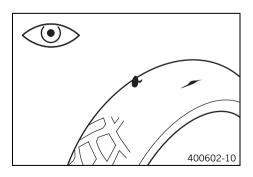

Other tires could have a negative effect on handling characteristics.

The type, condition, and air pressure of the tires all have a major impact on the handling characteristics of the motorcycle.

The tires mounted on the front and rear wheels must have a similar profile.

Worn tires have a negative effect on riding behavior, especially on wet surfaces.

If used regularly on public roads, tires wear much faster and the minimum tread depth and general condition of the tires must be checked more frequently.

- Check the front and rear tires for cuts, run-in objects, and other damage.
  - » If the tires exhibit cuts, run-in objects, or other damage:
    - Change the tires.
  - Check the depth of the tread.

## Info Note

Note local national regulations concerning the minimum tread depth.

Minimum tread depth	≥ 2 mm (≥ 0.08 in)	
---------------------	--------------------	--

- » If the tread depth is less than the minimum permissible depth:
  - Change the tires.
- Check the age of the tires.

## 14 WHEELS, TIRES

#### Info

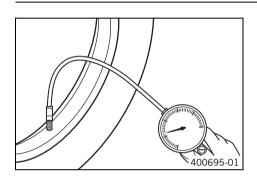

The tire's date of manufacture is usually part of the tire markings and is indicated by four digits. The first two digits refer to the week of manufacture and last two digits refer to the year of manufacture. KTM recommends that the tires be changed after 5 years at the latest, regardless of the actual state of wear.

- » If a tire is more than 5 years old:
  - Change the tires.

#### 14.6 Checking the tire air pressure

Info

Low tire air pressure leads to abnormal wear and overheating of the tire. Correct tire air pressure ensures optimal riding comfort and maximum tire service life.

- Remove the protection cap.
- Check the tire air pressure when the tires are cold.

Tire air pressure, offroad	
Front	0.9 bar (13 psi)
Rear	0.7 bar (10 psi)
Tire air pressure, road	
Front	1.5 bar (22 psi)
Rear	1.5 bar (22 psi)

- If the tire pressure does not meet specifications:
- Correct the tire pressure.
- Mount protection cap.

#### 14.7 Checking the spoke tension

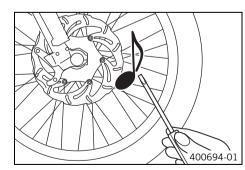

#### Warning

Danger of accidents Instable handling due to incorrect spoke tension.

- Ensure that the spoke tension is correct. (Your authorized KTM workshop will be glad to help.)

### • Info

A loose spoke causes wheel imbalance and rapidly leads to more loose spokes. If the spokes are too tight, they can break due to local overload. Check the spoke tension regularly, especially on a new motorcycle.

- Briefly strike each spoke with the tip of a screwdriver.

#### lnfo

The tone frequency depends on the length of the spoke and the spoke diameter.

If you hear different tone frequencies from different spokes of equal length and diameter, this is an indication of different spoke tensions.

#### You should hear a high note.

- If the spoke tension varies:
  - Correct the spoke tension. 🔌
- Check the spoke torque.

#### Guideline

Spoke nippleM4.56 Nm (4.4 lbf ft)

Torque wrench with various accessories in set (58429094000)

#### 15.1 Removing the battery 🔌

#### Warning

**Risk of injury** Battery acid and battery gases cause serious chemical burns.

\_ \_

- Keep batteries out of the reach of children. \_
- Wear suitable protective clothing and goggles. \_
- Avoid contact with battery acid and battery gases. \_

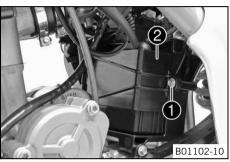

B01103-10

Keep sparks and open flames away from the battery. Only charge in well-ventilated rooms.

Remove screw 1.

Remove fastening plate **2**.

In the event of skin contact, rinse with large amounts of water. If battery acid gets in the eyes, rinse with water for at least 15 minutes and contact a physician.

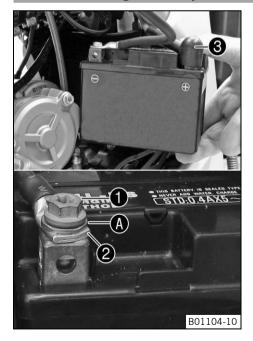

Switch off all power consumers and switch off the engine.

- Remove the battery from the battery compartment.
- Disconnect negative cable **3** from the battery.
- Pull back positive terminal cover **4** and disconnect the positive cable from the battery.

#### 15.2 Installing the battery A

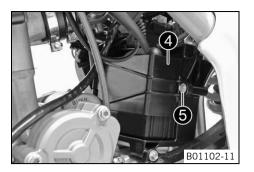

Position the positive cable and mount and tighten the screw. Cuidalina

Screw, battery terminal	M5	2.5 Nm
		(1.84 lbf ft)
<b>Info</b>	-	-
Both poles of the co	ntact disk \Lambda must be mou	inted between screw 🚺 and
cable lug 2 with the claws facing down.		

- Slide positive terminal cover ③ over the positive terminal.
- Position the negative cable and mount and tighten the screw.

#### Guideline

Screw, battery terminal	M5	2.5 Nm (1.84 lbf ft)
Battery (YTX5L-BS) (* p. 100)		

- Position the battery in the battery compartment.
- Attach fixing flap **4**.
- Mount and tighten screw **5**.

### 15.3 Recharging the battery 🔧

#### Warning

Risk of injury Battery acid and battery gases cause serious chemical burns.

- Keep batteries out of the reach of children.
- Wear suitable protective clothing and goggles.
- Avoid contact with battery acid and battery gases.
- Keep sparks and open flames away from the battery. Only charge in well-ventilated rooms.
- In the event of skin contact, rinse with large amounts of water. If battery acid gets in the eyes, rinse with water for at least 15 minutes and contact a physician.

## Warning

Environmental hazard The battery contains elements that are harmful to the environment.

Do not discard batteries with the household waste. Dispose of faulty batteries in an environmentally compatible manner.
 Give the battery to your authorized KTM dealer or dispose of it at a collection point for used batteries.

#### Warning

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

#### Info

Even when there is no load on the battery, it discharges steadily.

The charge state and the type of charge are very important for the service life of the battery.

Rapid recharging with a high charging current shortens the battery's service life.

If the charging current, charging voltage, and charging time are exceeded, electrolyte escapes through the safety valves. This reduces the battery capacity.

If the battery is depleted from starting the vehicle repeatedly, the battery must be charged immediately.

If the battery is left in a discharged state for an extended period, it will become over-discharged and sulfate, destroying the battery.

The battery is maintenance-free, i.e., the acid level does not have to be checked.

#### Preparatory work

- Remove the battery. 🔌 (🕶 p. 74)

#### Main work

- Connect the battery charger to the battery. Switch on the battery charger.

Battery charger (58429074000)

You can also use the battery charger to test the rest potential and starting ability of the battery, and to test the alternator. With this device, you cannot overcharge the battery.

#### Never remove lid 1.

Charge the battery with a maximum of 10% of the capacity specified on the battery housing **2**.

- Switch off the battery charger after charging. Disconnect the battery charger from the battery.

#### Guideline

The charging current, charging voltage, a	and charging time must not be exceeded.
Charge the battery regularly when the motorcycle is not in use	3 months

#### **Finishing work**

- Install the battery. 🔌 (🕶 p. 74)

#### 15.4 Changing the main fuse

#### Warning

- Fire hazard The electrical system can be overloaded if the wrong fuses are used.
- Use only fuses with the prescribed amperage. Never by-pass or repair fuses.

### Info

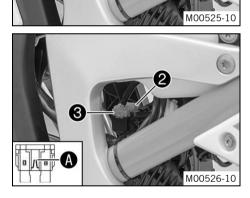

The main fuse protects all power consumers of the vehicle. It is located behind the battery.

#### Preparatory work

- Switch off all power consumers and switch off the engine.

#### Main work

Remove protection caps 1.

- Remove the faulty main fuse 2.

#### Info

A defective fuse is indicated by a burned-out fuse wire (A). A reserve fuse (3) is located in the starter relay.

Install a new main fuse.

Fuse (58011109120) (🕶 p. 100)

Check that the electrical equipment is functioning properly.

## • Tip

Insert the spare fuse so that it is available if needed.

Mount the protection caps.

#### **Finishing work**

\_

- Remove the motorcycle from the lift stand. (\* p. 37)

#### 15.5 Changing the fuses of individual power consumers

### • Info

The fuse box containing the fuses of individual power consumers is located under the seat.

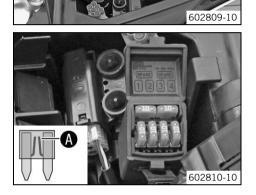

#### Preparatory work

- Switch off all power consumers and switch off the engine.
- Fold the seat up. (\* p. 45)

#### Main work

1

- Pull the EFI control unit 1 from the holder and hang it to one side.
- Open fuse box cover **2**.

Remove the defective fuse.

#### Guideline

Fuse 1 - 10 A - EFI control unit, lambda sensor, injection valve
Fuse <b>2</b> - 10 A - fuel pump
Fuse <b>3</b> - 10 A - high beam, low beam, parking light, tail light, license plate lamp
Fuse <b>4</b> - 10 A - horn, brake light, turn signal, radiator fan, speedometer
Fuses res - 10 A - spare fuses

## Info

A defective fuse is indicated by a burned-out fuse wire **A**.

### Warning

**Fire hazard** The electrical system can be overloaded if the wrong fuses are used.

- Use only fuses with the prescribed amperage. Never by-pass or repair fuses.
- Use spare fuses with the correct rating only.

Fuse (75011088010) (🕶 p. 100)

## • Tip

Replace the spare fuse in the fuse box so that it is available if needed.

- Check that the power consumer is functioning properly.
- Close the fuse box cover.
- Position the EFI control unit.

#### **Finishing work**

### 15.6 Removing the headlight mask with the headlight

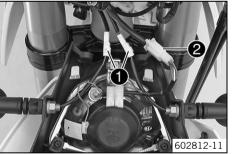

- Switch off all power consumers.
  - Detach the brake line and wiring harness 1.
  - Release rubber band **2**. Slide the headlight mask up and swing it forward.

Disconnect the plug-in connectors (3) for the turn signals and (4) for the head-light.

### 15.7 Refitting the headlight mask with the headlight

4

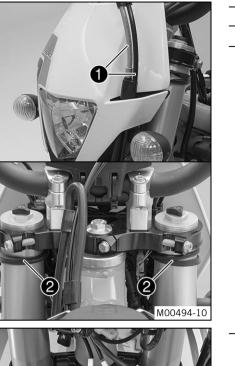

602812-10

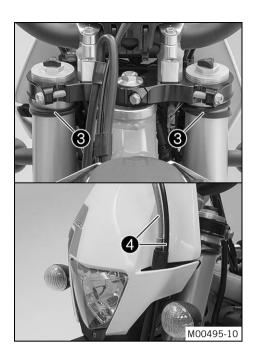

З

#### Main work

- Connect the plug-in connectors 1 for the turn signals and 2 for the headlight.

- Position the headlight mask and fix it with the rubber band  $\Im$ .
- ✓ The holding lugs engage.
- Position the brake line and wiring harness 4.

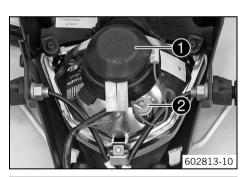

Finishing work

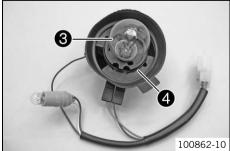

#### 15.8 Changing the headlight bulb

#### Note

Damage to reflector Reduced brightness.

 Grease on the lamp will evaporate due to the heat and be deposited on the reflector. Clean the lamp and keep it free of grease before mounting.

#### Preparatory work

#### Main work

\_

- Turn rubber cap 1 together with the underlying bulb socket counterclockwise all the way and remove it.
- Pull bulb socket 2 of the parking light out of the reflector.
- Press headlight bulb 3 lightly into the bulb socket, turn it counterclockwise, and pull it out.
- Insert the new headlight bulb.

Headlight (S2/socket BA20d) (\* p. 100)

- Insert the rubber cap with the bulb socket into the reflector and turn it clockwise all the way.

Ensure that O-ring 4 is seated properly.

- Insert the bulb socket of the parking light into the reflector.

#### **Finishing work**

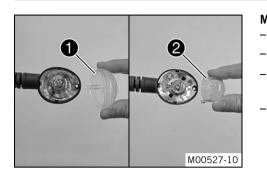

- Check the headlight setting. ( p. 80)

### 15.9 Changing the turn signal bulb

#### Note

#### Damage to reflector Reduced brightness.

 Grease on the lamp will evaporate due to the heat and be deposited on the reflector. Clean the lamp and keep it free of grease before mounting.

#### Main work

- Remove the screw on the rear of the turn signal housing.
- Carefully remove diffuser 1.
- Lightly squeeze together the orange cap ② in the area of the holding lugs and take it off.
- Press the turn signal bulb carefully into the socket, turn it counterclockwise by about 30°, and take it out of the socket.

## • Info

Do not touch the reflector with your fingers, and keep it free from grease.

 Press the new turn signal bulb carefully into the socket and turn it clockwise until it stops.

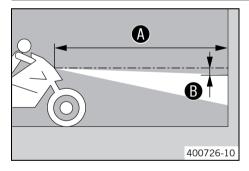

Turn signal (R10W/socket BA15s) (\* p. 100)

- Mount the orange cap.
- Position the diffuser.
- Insert the screw and first turn it counterclockwise until it engages in the thread. Tighten the screw slightly.

#### **Finishing work**

```
- Check that the turn signal system is functioning properly.
```

### 15.10 Checking the headlight setting

- Position the vehicle upright on a horizontal surface in front of a light wall and make a mark at the height of the center of the low beam headlight.
- Make another mark at a distance **B** under the first mark.

#### Guideline

Distance <b>B</b>	5 cm (2 in)

- Position the vehicle vertically a distance  $oldsymbol{A}$  away from the wall.

Guideline

Distance A	5 m (16 ft)

- The rider now sits down on the motorcycle.

- Switch on the low beam.

Check the headlight setting.

The boundary between light and dark must be exactly on the lower mark for a motorcycle with driver.

- » If the boundary between light and dark does not meet specifications:

#### 15.11 Adjusting the headlight range

#### **Preparatory work**

#### Main work

\_

Adjust the beam distance of the headlight by turning screw ①.

#### Guideline

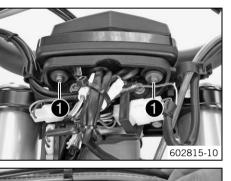

For a motorcycle with rider, the light/dark boundary must be exactly on the lower mark (the mark is created in: Checking the headlight setting).

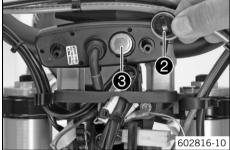

#### Info

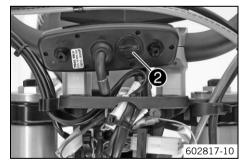

Turn clockwise to increase the headlight range, turn counterclockwise to reduce the headlight range.

A change in weight on the vehicle may require a correction of the headlight range.

### 15.12 Changing the speedometer battery

### Preparatory work

#### Main work

- Remove screws 1.
- Pull the speedometer upward out of the holder.
- Using a coin, turn protection cap **2** all the way counterclockwise and remove it.
- Remove speedometer battery 3.
- Insert the new battery with the label facing outward.

Speedometer battery (CR 2032) ( \* p. 100)

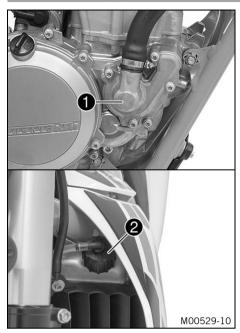

- Check the O-ring of the protection cap for correct seating.
- Position protection cap **2** and turn all the way clockwise using a coin.
- Press any button on the speedometer.
  - The speedometer is activated.
- Position the speedometer in the holder.
- Mount and tighten the screws with washers.

#### **Finishing work**

- Refit the headlight mask with the headlight. (\* p. 78)
- Check the headlight setting. (\* p. 80)

## 16 COOLING SYSTEM

#### 16.1 Cooling system

#### Water pump 1 in the engine circulates the coolant.

The pressure resulting from the warming of the cooling system is regulated by a valve in radiator cap **2**. This ensures that operating the vehicle at the specified coolant temperature will not result in a risk of malfunctions.

120 °C (248 °F)

Cooling is effected by the air stream.

The lower the speed, the less the cooling effect. Dirty cooling fins also reduce the cooling effect.

The radiator fan provides extra cooling. It is controlled by a thermoswitch.

#### 16.2 Checking the antifreeze and coolant level

#### Warning

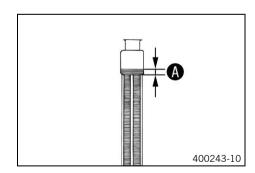

**Danger of scalding** During motorcycle operation, the coolant gets very hot and is under pressure.

Do not remove the radiator cap, radiator hoses or other cooling system components when the engine is hot. Allow the
engine and cooling system to cool down. In case of scalding, rinse immediately with lukewarm water.

### Warning

**Danger of poisoning** Coolant is poisonous and a health hazard.

 Coolant must not come into contact with the skin, eyes, or clothing. If contact occurs with the eyes, rinse with water immediately and contact a physician. Immediately clean contaminated areas on the skin with soap and water. If coolant is swallowed, contact a physician immediately. Change clothing that is contaminated with coolant. Keep coolant out of reach of children.

#### Condition

The engine is cold.

- Stand the motorcycle upright on a horizontal surface.
- Remove the radiator cap.
- Check the coolant antifreeze.

-2545 °C (-1349 °F)		
» If the antifreeze of the coolant does not meet specifications:		
<ul> <li>Correct the coolant antifreeze.</li> </ul>		
Check the coolant level in the radiator.		
Coolant level \Lambda above radiator fins.	10 mm (0.39 in)	

- » If the coolant level does not meet specifications:
  - Correct the coolant level.

Coolant (* p. 103)	
--------------------	--

- Mount the radiator cap.

## 16 COOLING SYSTEM

#### 16.3 Checking the coolant level

### Warning

Danger of scalding During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not remove the radiator cap, radiator hoses or other cooling system components when the engine is hot. Allow the engine and cooling system to cool down. In case of scalding, rinse immediately with lukewarm water.

#### Warning

Danger of poisoning Coolant is poisonous and a health hazard.

 Coolant must not come into contact with the skin, eyes, or clothing. If contact occurs with the eyes, rinse with water immediately and contact a physician. Immediately clean contaminated areas on the skin with soap and water. If coolant is swallowed, contact a physician immediately. Change clothing that is contaminated with coolant. Keep coolant out of reach of children.

#### Condition

The engine is cold.

- Stand the motorcycle upright on a horizontal surface.
- Remove the radiator cap.
  - Check the coolant level in the radiator.

	Coolant level A above radiator fins. 10 mm (0.39 in)
	» If the coolant level does not meet specifications:
	<ul> <li>Correct the coolant level.</li> </ul>
400042.10	Coolant (* p. 103)
400243-10	

#### • Mount the radiator cap.

#### 16.4 Draining the coolant **A**

#### Warning

Danger of scalding During motorcycle operation, the coolant gets very hot and is under pressure.

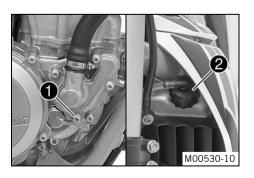

Do not remove the radiator cap, radiator hoses or other cooling system components when the engine is hot. Allow the
engine and cooling system to cool down. In case of scalding, rinse immediately with lukewarm water.

#### Warning

**Danger of poisoning** Coolant is poisonous and a health hazard.

 Coolant must not come into contact with the skin, eyes, or clothing. If contact occurs with the eyes, rinse with water immediately and contact a physician. Immediately clean contaminated areas on the skin with soap and water. If coolant is swallowed, contact a physician immediately. Change clothing that is contaminated with coolant. Keep coolant out of reach of children.

#### Condition

The engine is cold.

- Stand the motorcycle upright.
- Place a suitable container under the water pump cover.
- Remove screw 1. Take off radiator cap 2.
- Completely drain the coolant.

Screw, water pump coverM610 Nm (7.4 lbf ft)
---

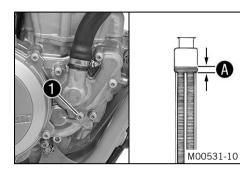

## 16 COOLING SYSTEM

### 16.5 Refilling coolant 🔌

#### Warning Danger of

Danger of poisoning Coolant is poisonous and a health hazard.

 Coolant must not come into contact with the skin, eyes, or clothing. If contact occurs with the eyes, rinse with water immediately and contact a physician. Immediately clean contaminated areas on the skin with soap and water. If coolant is swallowed, contact a physician immediately. Change clothing that is contaminated with coolant. Keep coolant out of reach of children.

#### Main work – Make s

\_

- Make sure that screw 🚺 is tightened.
- Stand the motorcycle upright.
- Pour coolant in up to measurement **(A)** above the radiator fins.

Guideline

1	0 mm (0.39 in)		
С	oolant	0.7 l (0.7 qt.)	Coolant (🕶 p. 103)

Mount the radiator cap.

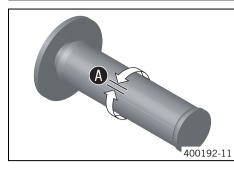

#### **Finishing work**

- Take a short test ride.

- Check the coolant level. (\* p. 83)

#### **TUNING THE ENGINE** 17

#### 17.1 Checking the play in the throttle cable

#### Check the throttle grip for smooth operation. \_

Move the handlebar to the straight-ahead position. Turn the throttle grip back and forth slightly and determine the play in throttle cable  $\mathbf{A}$ .

#### Throttle cable play

- If the throttle cable play does not meet specifications:
  - Adjust the play in the throttle cable. 🔌 (🕶 p. 85)

### Danger

Danger of poisoning Exhaust gases are toxic and inhaling them may result in unconsciousness and/or death.

3... 5 mm (0.12... 0.2 in)

- When running the engine, always make sure there is sufficient ventila-\_ tion, and do not start or run the engine in an enclosed space without an effective exhaust extraction system.
- Start the engine and let it run idle. Move the handlebar to and fro over the entire steering range.

The idle speed must not change.

- If the idle speed changes:
  - Adjust the play in the throttle cable.  $\checkmark$  ( $\checkmark$  p. 85) \_

#### Adjusting the play in the throttle cable 🔦 17.2

#### Preparatory work

- Fold the seat up. (\* p. 45) \_
- Remove the fuel tank. 🔌 (\* p. 50)
- \_ Check the throttle cable routing. (\* p. 57)

#### Main work

- Move the handlebar to the straight-ahead position. \_
- Loosen nut 1. Turn adjusting screw 2 so that there is play in the throttle cable at the throttle grip.

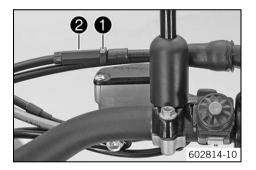

Guideline

	Throttle cable play	3 5 mm (0.12 0.2 in)
--	---------------------	----------------------

- Tighten nut **1**.
- Check the throttle grip for smooth operation. \_

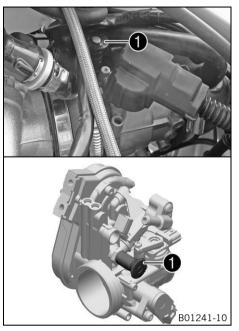

#### **Finishing work**

- Install the fuel tank. 🔌 (\* p. 51)
- Lock the seat. ( p. 45)

## 17 TUNING THE ENGINE

### 17.3 Adjusting the idle speed **A**

- Run the engine warm and push the idle speed adjusting screw 1 all the way in.
  - Set the desired idle speed by turning the idle speed adjusting screw.

#### Guideline

Idle speed

\_

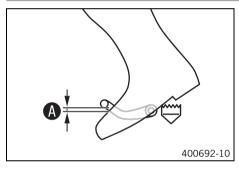

1,800..

1,800... 1,900 rpm

### Info

Turn counterclockwise to increase the idle speed. Turn clockwise to decrease the idle speed.

### 17.4 Checking the basic position of the shift lever

Sit on the vehicle in the riding position and determine distance (A) between the upper edge of your boot and the shift lever.

Distance between shift lever and upper	10 20 mm (0.39 0.79 in)
edge of boot	

» If the distance does not meet specifications:

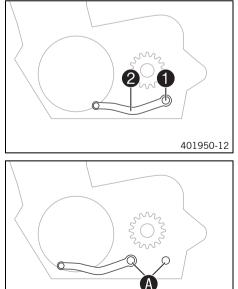

Remove screw **1** and take off shift lever **2**.

Clean gear teeth (A) of the shift lever and shift shaft.

The range of adjustment is limited.

nents during the shift procedure.

## 17.5 Adjusting the basic position of the shift lever $\checkmark$

401951-10 -

The shift lever must not come into contact with any other vehicle compo-

Mount the shift lever on the shift shaft in the required position and engage the

#### 18.1 Changing the fuel screen 🔌

### Danger

Fire hazard Fuel is highly flammable.

- Never refuel the vehicle near open flames or burning cigarettes, and always switch off the engine first. Be careful that no
  fuel is spilt, especially on hot vehicle components. Clean up spilt fuel immediately.
- The fuel in the fuel tank expands when warm and may emerge if overfilled. Follow the instructions on refueling.

### Warning

Danger of poisoning Fuel is poisonous and a health hazard.

Fuel must not come into contact with the skin, eyes, or clothing. Do not breathe in the fuel vapors. If contact occurs with
the eyes, rinse with water immediately and contact a physician. Immediately clean contaminated areas on the skin with
soap and water. If fuel is swallowed, contact a physician immediately. Change clothing that is contaminated with fuel.

### **Warning**

Environmental hazard Improper handling of fuel is a danger to the environment.

- Do not allow fuel to get into the ground water, the ground, or the sewage system.

#### Main work

• Thoroughly clean the plug-in connection of the fuel line using compressed air.

## • Info

- Under no circumstances should dirt enter into the fuel line. Dirt in the fuel line clogs the injection valve.
- Disconnect the plug-in connection of the fuel line.
- Pull fuel screen 1 out of the connecting piece.
- Slide a new fuel screen into the connecting piece.
- Lubricate the O-ring and connect plug-in connection of the fuel line.

#### **Finishing work**

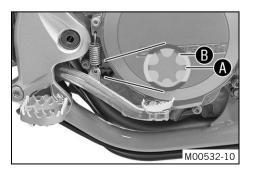

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and/or death.

- When running the engine, always make sure there is sufficient ventilation, and do not start or run the engine in an enclosed space without an effective exhaust extraction system.
- Start the engine and check the response.

#### 18.2 Checking the engine oil level

#### • Info

The engine oil level can be checked when the engine is cold or warm.

#### Preparatory work

- Stand the motorcycle upright on a horizontal surface.

#### Condition

The engine is cold.

- Check the engine oil level.

The engine oil level is up to the middle  $\mathbf{A}$  of the level viewer.

- If the engine oil is not up to the middle of the level viewer:

#### Condition

The engine is at operating temperature.

Check the engine oil level.

After switching off the engine, wait one minute before checking the level.

The engine oil is at a level between the middle (A) and upper edge (B) of the level viewer.

- » If the engine oil is not up to the middle  $(\mathbf{A})$  of the level viewer:
  - Add engine oil. (\* p. 90)

18.3 Changing the engine oil and oil filter, cleaning the oil screen  $\checkmark$ 

#### Warning

Danger of scalding Engine oil and gear oil get very hot when the motorcycle is ridden.

- Wear appropriate protective clothing and safety gloves. In case of burns, rinse immediately with lukewarm water.

#### Warning

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

## • Info

Drain the engine oil only when the engine is warm.

#### Preparatory work

- Park the motorcycle on a level surface.
- Remove the engine guard. (
   p. 60)

#### Main work

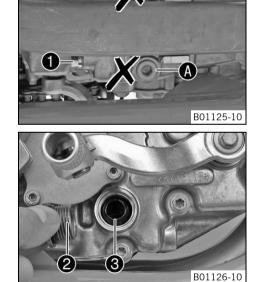

- Place a suitable container under the engine.
- Remove the oil drain plug 1 with the magnet and seal ring.

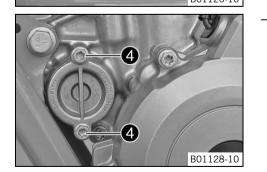

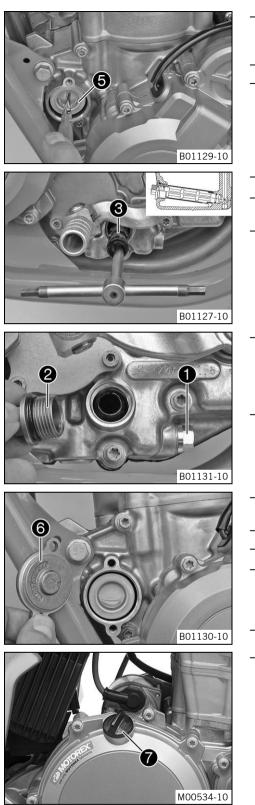

Remove plug 2 with oil screen 3 and the O-rings.

Remove screws 4. Remove the oil filter cover with the O-ring.

- Pull oil filter **(5)** out of the oil filter housing.
  - Circlip pliers reverse (51012011000)
- Completely drain the engine oil.
- Thoroughly clean the parts and sealing area.
- Position oil screen 3 with the O-rings on a pin wrench.
- Position the pin wrench through the drilled hole of the screw plug in the opposite section of the engine case.
- Push the oil screen all the way into the engine case.
- Mount and tighten screw plug **2** with the O-ring.

Guideline					
Screw plug, oil screen	M20x1.5	15 Nm (11.1 lbf ft)			

Mount and tighten the oil drain plug ① with the magnet and a new seal ring.
 Guideline

(14.8 lbf ft)	Oil drain plug with magnet	M12x1.5	20 Nm (14.8 lbf ft)
---------------	----------------------------	---------	------------------------

- Lay the motorcycle on its side and fill the oil filter housing to about 1/3 full with engine oil.
- Insert the oil filter into the oil filter housing.
- Oil the O-ring of the oil filter cover and mount it with the oil filter cover **(3)**.
- Mount and tighten the screws.

Guideline	
-----------	--

Screw, oil filter cover	M6	10 Nm (7.4 lbf ft)
Stand the metawayale ymwight		

- Stand the motorcycle upright.
- Remove the oil filler plug with the O-ring from the clutch cover and fill up with engine oil.

Engine oil	1.20 I (1.27 qt.)	Engine oil (SAE 10W/50) (* p. 103)	
		Alternative engine oil	Engine oil (SAE 10W/60) (00062010035) (* p. 103)

#### Info

Too little engine oil or poor-quality engine oil results in premature wear to the engine.

Install and tighten the oil filler plug with the O-ring.

#### Danger

4

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and/or death.

 When running the engine, always make sure there is sufficient ventilation, and do not start or run the engine in an enclosed space without an effective exhaust extraction system.

- Start the engine and check that it is oil-tight.

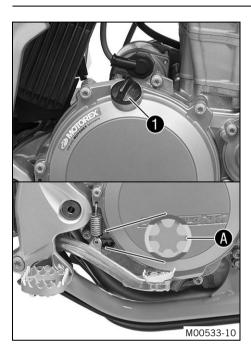

#### **Finishing work**

- Check the engine oil level. (\* p. 87)

### 18.4 Adding engine oil

#### • Info

Too little engine oil or poor-quality engine oil results in premature wear to the engine.

#### Main work

- Remove the oil filler plug  $\mathbf{1}$  with the O-ring from the clutch cover.
- Fill engine oil to the middle (A) of the level viewer.

Engine oil (SAE 10W/50) (\* p. 103) Engine oil (SAE 10W/60) (00062010035) (\* p. 103)

#### Info

In order to achieve optimal engine performance, it is not advisable to mix different engine oils.

We recommended changing the engine oil when necessary.

Install and tighten the oil filler plug with the O-ring.

#### Danger

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and/or death.

- When running the engine, always make sure there is sufficient ventilation, and do not start or run the engine in an enclosed space without an effective exhaust extraction system.
- Start the engine and check that it is oil-tight.

#### **Finishing work**

- Check the engine oil level. (\* p. 87)

## 19 CLEANING, CARE

#### 19.1 Cleaning the motorcycle

#### Note

Material damage Damage and destruction of components by high-pressure cleaning equipment.

When cleaning the vehicle with a pressure cleaner, do not point the water jet directly onto electrical components, connectors, cables, bearings, etc. Maintain a minimum distance of 60 cm between the nozzle of the pressure cleaner and the component. Excessive pressure can cause malfunctions or destroy these parts.

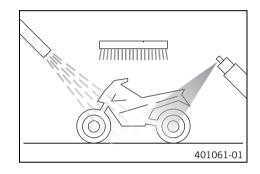

### Warning

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

### Info

If you clean the motorcycle regularly, its value and appearance will be maintained over a long period. Avoid direct sunshine on the motorcycle during cleaning.

- Close off the exhaust system to keep water from entering.
  - First remove coarse dirt particles with a gentle spray of water.
- Spray very dirty areas with a normal motorcycle cleaner and then clean with a paintbrush.

Motorcycle cleaner (\* p. 105)

#### Info

Use warm water containing normal motorcycle cleaner and a soft sponge. Never apply motorcycle cleaner to the dry vehicle; always rinse with water first.

- After rinsing the motorcycle with a gentle spray of water, allow it to dry thoroughly.
- Remove the plug from the exhaust system.

#### Warning

**Danger of accidents** Reduced braking efficiency due to a wet or dirty brake system.

- · Clean or dry a dirty or wet brake system by riding and braking gently.
- After cleaning, ride a short distance until the engine reaches operating temperature.

#### Info

The heat produced causes water at inaccessible locations in the engine and the brake system to evaporate.

- After the motorcycle has cooled off, lubricate all moving parts and bearings.
- Clean the chain. (🕶 p. 53)
- Treat bare metal parts (except for the brake discs and exhaust system) with anticorrosion materials.

Preserving materials for paints, metal and rubber (\* p. 105)

 Treat all plastic parts and powder-coated parts with a mild cleaning and care product.

Special cleaner for glossy and matte paint finishes, metal and plastic surfaces (\* p. 105)

- Oil the steering lock.

Universal oil spray (\* p. 106)

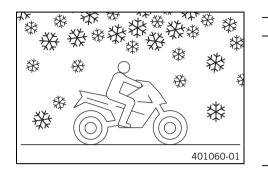

#### 19 **CLEANING, CARE**

#### 19.2 Checks and maintenance steps for winter operation

#### Info

If the motorcycle is used in the winter, salt can be expected on the roads. Precautions need to be taken against road salt corrosion.

If the vehicle was operated in road salt, clean it with cold water after riding. Warm water would enhance the corrosive effects of salt.

- Clean the motorcycle. (\* p. 91)
- Clean the brake system.

After EVERY trip on salted roads, thoroughly wash the brake calipers and brake linings with cold water and dry carefully. This should be done after the parts are cooled down and while they are installed. After riding on salted roads, thoroughly wash the motorcycle with cold water and dry it well.

Treat the engine, swingarm, and all other bright and zinc-plated parts (except for the brake discs) with a wax-based corrosion inhibitor.

#### Info

Corrosion inhibitor is not permitted to come in contact with the brake discs as this would greatly reduce the braking force.

Clean the chain. (\* p. 53) \_

## 20 STORAGE

### 20.1 Storage

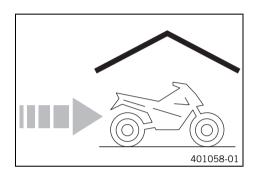

Warning

Danger of poisoning Fuel is poisonous and a health hazard.

- Fuel must not come into contact with the skin, eyes, or clothing. Do not breathe in the fuel vapors. If contact occurs with the eyes, rinse with water immediately and contact a physician. Immediately clean contaminated areas on the skin with soap and water. If fuel is swallowed, contact a physician immediately. Change clothing that is contaminated with fuel. Store fuel properly in a suitable canister and keep away from children.

#### Info

If you want to garage the motorcycle for a longer period, take the following steps. Before storing the motorcycle, check all parts for function and wear. If service, repairs or replacements are necessary, you should do this during the storage period (less workshop overload). In this way, you can avoid long workshop waiting times at the start of the new season.

- When refueling for the last time before taking the motorcycle out of service, add fuel additive.

Fuel additive (\* p. 105)

- Refuel. (\* p. 27)
- Clean the motorcycle. (\* p. 91)
- Change the engine oil and oil filter, clean the oil screen. 🔌 (🕶 p. 88)

- Remove the battery. 🔌 (🕶 p. 74)
- Recharge the battery. 🔌 (🕶 p. 75)

(	Guideline		
	Storage temperature of battery without direct sunlight	0 35 °C (32 95 °F)	

 Store the vehicle in a dry location that is not subject to large fluctuations in temperature.

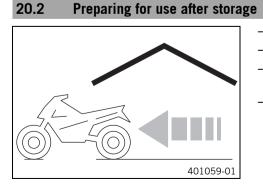

#### Info

KTM recommends raising the motorcycle.

- Cover the motorcycle with a porous sheet or blanket. Do not use non-porous materials since they prevent humidity from escaping, thus causing corrosion.

#### Info

Avoid running the engine for a short time only. Since the engine cannot warm up properly, the water vapor produced during combustion condenses and causes valves and exhaust system to rust.

- Remove the motorcycle from the lift stand. (\* p. 37)
- Install the battery. 🔧 (🕶 p. 74)
- Take a test ride.

# 21 TROUBLESHOOTING

Faults	Possible cause	Action
The engine cannot be cranked (elec-	Operating error	<ul> <li>Carry out the start procedure. (</li></ul>

## 23.1 Engine

Design	1-cylinder 4-stroke engine, water-cooled
Displacement	349.7 cm <sup>3</sup> (21.34 cu in)
Stroke	57.5 mm (2.264 in)
Bore	88 mm (3.46 in)
Compression ratio	12.3:1
Idle speed	1,800 1,900 rpm
Control	DOHC, four valves controlled via cam lever, drive via timing chain
Valve diameter, intake	36.3 mm (1.429 in)
Valve diameter, exhaust	29.1 mm (1.146 in)
Valve clearance	
Intake at: 20 °C (68 °F)	0.10 0.15 mm (0.0039 0.0059 in)
Exhaust at: 20 °C (68 °F)	0.13 0.18 mm (0.0051 0.0071 in)
Crankshaft bearing	2 cylinder bearings
Conrod bearing	Slide bearing
Piston pin bearing	Not a bearing bush - DLC-plated piston pins
Pistons	Cast light alloy
Piston rings	1 compression ring, 1 oil scraper ring
Engine lubrication	Pressure circulation lubrication with two Eaton pumps
Primary transmission	24:73
Clutch	Multidisc clutch in oil bath/hydraulically activated
Transmission ratio	
1st gear	13:32
2nd gear	16:30
3rd gear	16:24
4th gear	23:28
5th gear	23:23
6th gear	26:20
Alternator	12 V, 196 W
Ignition	Contactless controlled fully electronic ignition with digital igni- tion adjustment
Spark plug	NGK LMAR9AI-10
Spark plug electrode gap	1.0 mm (0.039 in)
Cooling	Water cooling, permanent circulation of coolant by water pump
Starting aid	Electric starter

## 23.3 Capacities

### 23.3.1 Engine oil

Engine oil	1.20 I (1.27 qt.)	(1.27 qt.) Engine oil (SAE 10W/50) (* p. 103)	
		Alternative engine oil	Engine oil (SAE 10W/60) (00062010035) (& p. 103)

### 23.3.2 Coolant

	Coolant	0.7 l (0.7 qt.)	Coolant (* p. 103)
--	---------	-----------------	--------------------

### 23.3.3 Fuel

Total fuel tank capacity, approx.	5.5 I (1.45 US gal)	Super unleaded (ROZ 95/RON 95/PON 91) (* p. 104)
Fuel reserve, approx.		1.5 l (1.6 qt.)

### 23.4 Chassis

Frame	Perimeter, steel-aluminum composite frame
fork	WP Suspension 4357 MXMA
Suspension travel	
Front	250 mm (9.84 in)
Rear	260 mm (10.24 in)
Fork offset	20 mm (0.79 in)
Shock absorber	WP Suspension 4618 PDS DCC
Brake system	
Front	Disc brake with radially mounted four-piston brake caliper
Rear	Disc brake with radially mounted dual-piston brake caliper
Brake discs - diameter	
Front	260 mm (10.24 in)
Rear	210 mm (8.27 in)
Brake discs - wear limit	
Front	2.5 mm (0.098 in)
Rear	3.5 mm (0.138 in)
Tire air pressure, offroad	
Front	0.9 bar (13 psi)
Rear	0.7 bar (10 psi)
Tire air pressure, road	
Front	1.5 bar (22 psi)
Rear	1.5 bar (22 psi)
Secondary ratio	12:48
Chain	5/8 x 1/4" X-ring
Rear sprockets available	46, 48
Steering head angle	67°
Wheelbase	1,428±10 mm (56.22±0.39 in)
Ground clearance, unloaded	325 mm (12.8 in)
Seat height, unloaded	915 mm (36.02 in)
Weight without fuel, approx.	101 kg (223 lb.)
Maximum permissible front axle load	135 kg (298 lb.)
Maximum permissible rear axle load	175 kg (386 lb.)
Maximum permissible overall weight	280 kg (617 lb.)

## 23.5 Electrical system

Battery	YTX5L-BS	Battery voltage: 12 V Nominal capacity: 4 Ah Maintenance-free
Speedometer battery	CR 2032	Battery voltage: 3 V
Fuse	75011088010	10 A
Fuse	58011109120	20 A
Headlight	S2/socket BA20d	12 V 35/35 W
Parking light	W5W/socket W2.1x9.5d	12 V 5 W
Indicator lamps	W2.3W/socket W2x4.6d	12 V 2.3 W
Turn signal	R10W/socket BA15s	12 V 10 W
Brake/tail light	LED	
License plate lamp	W5W/socket W2.1x9.5d	12 V 5 W

### 23.6 Tires

Front tires	Rear tires
2.75 - 21 M/C 45M TT MAXXIS TRIALMAXX	4.00 R 18 M/C 64M TL Maxxis Trialmaxx

## 24 SUBSTANCES

### Brake fluid DOT 4 / DOT 5.1

#### Standard/classification

### – DOT

#### Guideline

 Use only brake fluid that complies with the specified standard (see specifications on the container) and that possesses the corresponding properties.

#### Recommended supplier

#### Castrol

- RESPONSE BRAKE FLUID SUPER DOT 4

#### Motorex®

- Brake Fluid DOT 5.1

#### Coolant

#### Guideline

 Only use high quality coolant with corrosion inhibitor for aluminum motors (even in countries with high temperatures). Using inferior antifreeze can result in corrosion and foaming.

#### Mixture ratio

Antifreeze protection: -2545 °C (-13	anti-corrosion/antifreeze
−49 °F)	distilled water

#### **Recommended supplier**

#### Motorex®

- COOLANT M3.0

#### Engine oil (SAE 10W/50)

#### Standard/classification

- JASO T903 MA (🕶 p. 107)
- SAE (\* p. 107) (SAE 10W/50)

#### Guideline

Use only engine oils that comply with the specified standards (see specifications on the container) and that possess the corresponding properties.

### Synthetic engine oil

#### Recommended supplier

- Motorex®
- Cross Power 4T

#### Engine oil (SAE 10W/60) (00062010035)

#### Standard/classification

- JASO T903 MA (🕶 p. 107)
- SAE (**\*** p. 107) (SAE 10W/60)
- KTM LC4 2007+

#### Guideline

 Use only engine oils that comply with the specified standards (see specifications on the container) and that possess the corresponding properties.

#### Synthetic engine oil

#### **Recommended supplier**

#### Motorex®

Cross Power 4T

#### Fork oil (SAE 4) (48601166S1)

#### Standard/classification

– SAE (\* p. 107) (SAE 4)

#### Guideline

Use only oils that comply with the specified standards (see specifications on the container) and that possess the corresponding
properties.

## 24 SUBSTANCES

### Shock absorber fluid (SAE 2.5) (50180751S1)

#### Standard/classification

- SAE (\* p. 107) (SAE 2.5)

#### Guideline

Use only oils that comply with the specified standards (see specifications on the container) and that possess the corresponding
properties.

#### Super unleaded (ROZ 95/RON 95/PON 91)

Standard/classification

- DIN EN 228 (ROZ 95/RON 95/PON 91)

#### Guideline

- Only use unleaded super fuel that matches or is equivalent to the specified fuel grade.
- Fuel with an ethanol content of up to 10 % (E10 fuel) is safe to use.

#### • Info Do n

Do not use fuel containing methanol (e. g. M15, M85, M100) or more than 10 % ethanol (e. g. E15, E25, E85, E100).

## 25 AUXILIARY SUBSTANCES

#### Air filter cleaner

Recommended supplier Motorex®

Racing Bio Dirt Remover

#### **Chain cleaner**

Recommended supplier Motorex®

Chain Clean

### **Fuel additive**

Recommended supplier Motorex<sup>®</sup> – Fuel Stabilizer

#### **High viscosity grease**

Recommended supplier SKF® – LGHB 2

#### Long-life grease

Recommended supplier Motorex<sup>®</sup> – Bike Grease 2000

#### Motorcycle cleaner

Recommended supplier Motorex® – Moto Clean

#### **Off-road chain spray**

Recommended supplier Motorex<sup>®</sup> – Chainlube Offroad

#### Oil for foam air filter

Recommended supplier Motorex® – Racing Bio Liquid Power

#### Preserving materials for paints, metal and rubber

Recommended supplier Motorex<sup>®</sup> – Moto Protect

#### Rubber grip adhesive (00062030051)

Recommended supplier KTM Motorrad AG – GRIP GLUE

#### Special cleaner for glossy and matte paint finishes, metal and plastic surfaces

Recommended supplier Motorex®

Quick Cleaner

## 25 AUXILIARY SUBSTANCES

### Universal oil spray

Recommended supplier Motorex® – Joker 440 Synthetic

## 26 STANDARDS

### **JASO T903 MA**

Different technical development directions required a new specification for 4-stroke motorcycles – the JASO T903 MA Standard. Earlier, engine oils from the automobile industry were used for 4-stroke motorcycles because there was no separate motorcycle specification. Whereas long service intervals are demanded for automobile engines, high performance at high engine speeds are in the foreground for motorcycle engines. In most motorcycles, the gearbox and the clutch are lubricated with the same oil as the engine. The JASO MA Standard meets these special requirements.

### SAE

The SAE viscosity classes were defined by the Society of Automotive Engineers and are used for classifying oils according to their viscosity. The viscosity describes only one property of oil and says nothing about quality.
