# **OWNER'S MANUAL 2017**

# Freeride 250 R

Art. no. 3213485en

# **DEAR KTM CUSTOMER**

Congratulations on your decision to purchase a KTM motorcycle. You are now the owner of a state-of-the-art sports motorcycle that will give you enormous pleasure if you service and maintain it properly.

We hope you enjoy your new vehicle!

Enter the serial numbers of your vehicle below.

Chassis number (🕮 p. 11)	Dealer's stamp
Engine number (鷗 p. 11)	
Key number (鷗 p. 11)	

The Owner's Manual contained the latest information for this model series at the time of going to print. Slight deviations resulting from continuing development and design of the motorcycles can, however, not be completely excluded.

All specifications are non-binding. KTM Sportmotorcycle GmbH specifically reserves the right to modify or delete technical specifications, prices, colors, forms, materials, services, designs, equipment, etc., without prior notice and without specifying reasons, to adapt these to local conditions, as well as to stop production of a particular model without prior notice. KTM accepts no liability for delivery options, deviations from illustrations and descriptions, misprints, and other errors. The models portrayed partly contain special equipment that does not belong to the regular scope of supply.

# 1 MEANS OF REPRESENTATION

-	bols used
The meaning of s	specific symbols is described below.
5	Indicates an expected reaction (e.g. of a work step or a function).
X	Indicates an unexpected reaction (e.g. of a work step or a function).
×	All work marked with this symbol requires specialist knowledge and technical understanding. In the interest of your own safety, have these jobs performed by an authorized KTM workshop. There, your motorcycle will be optimally cared for by specially trained experts using the specialist tools required.
	Indicates a page reference (more information is provided on the specified page).
i	Indicates information with more details or tips.
»	Indicates the result of a testing step.
1.2 Form	nats used
The typographica	al formats used in this document are explained below.
Specific name	Identifies a proprietary name.
Name®	Identifies a protected name.
Brand™	Identifies a brand available on the open market.
Underlined terms	Refer to technical details of the vehicle or indicate technical terms that are explained in

the glossary.

# 2 SAFETY ADVICE

### 2.1 Use definition - intended use

KTM sport motorcycles are designed and built to withstand the normal stresses and strains of offroad use.

### e Info

The motorcycle is authorized for public road traffic in the homologous (reduced) version only. In the derestricted version, the motorcycle must be used only on closed off property remote from public road traffic. The motorcycle is designed for trial riding and difficult offroad terrain and not for motocross.

### 2.2 Safety advice

A number of safety instructions need to be followed to operate the vehicle safely. Therefore, read this manual carefully. The safety instructions are highlighted in the text and are referred to at the relevant passages.

### lnfo

The vehicle has various information and warning labels at prominent locations. Do not remove information/warning labels. If they are missing, you or others may not recognize dangers and may therefore be injured.

2.3

### Degrees of risk and symbols

### Danger

Indicates a danger that will immediately and invariably lead to fatal or serious permanent injury if the appropriate measures are not taken.

### Warning

Indicates a danger that is likely to lead to fatal or serious injury if the appropriate measures are not taken.

### Caution

Indicates a danger that may lead to minor injuries if the appropriate measures are not taken.

### Note

Indicates a danger that will lead to considerable machine and material damage if the appropriate measures are not taken.

### **Warning**

Indicates a danger that will lead to environmental damage if the appropriate measures are not taken.

### 2.4 Tampering warning

Tampering with the noise control system is prohibited. Federal law prohibits the following acts or the causing thereof:

- 1 The removal or rendering inoperative by any person other than for purposes of maintenance, repair, or replacement, of any device or element of design incorporated into any new vehicle for the purpose of noise control prior to its sale or delivery to the ultimate purchaser or while it is in use, or
- 2 the use of the vehicle after such device or element of design has been removed or rendered inoperative by any person.

Among those acts presumed to constitute tampering are the acts listed below:

- 1 Removal or puncturing of the main silencer, baffles, header pipes or any other components which conduct exhaust gases.
- 2 Removal or puncturing of parts of the intake system.
- 3 Lack of proper maintenance.
- 4 Replacing moving part of the vehicle, or parts of the exhaust or intake system, with parts other than those specified by the manufacturer.

# 2 SAFETY ADVICE

### 2.5 Safe operation

### **Danger**

**Danger of accidents** A rider who is not fit to ride poses a danger to him or herself and others.

- Do not operate the vehicle if you are not fit to ride due to alcohol, drugs or medication.
- Do not operate the vehicle if you are physically or mentally impaired.

### Danger

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.

### Warning

Danger of burns Some vehicle components become very hot when the vehicle is operated.

- Do not touch any parts such as the exhaust system, radiator, engine, shock absorber, or brake system before the vehicle parts have cooled down.
- Let the vehicle parts cool down before you perform any work on the vehicle.

Only operate the vehicle when it is in perfect technical condition, in accordance with its intended use, and in a safe and environmentally compatible manner.

An appropriate driver's license is needed to ride the vehicle on public roads.

Have malfunctions that impair safety promptly eliminated by an authorized KTM workshop. Adhere to the information and warning labels on the vehicle.

### 2.6 Protective clothing

### Warning

Risk of injury Missing or poor protective clothing presents an increased safety risk.

- Wear appropriate protective clothing such as helmet, boots, gloves as well as trousers and a jacket with protectors on all rides.
- Always wear protective clothing that is in good condition and meets the legal regulations.

In the interest of your own safety, KTM recommends that you only operate the vehicle while wearing protective clothing.

### 2.7 Work rules

Special tools are necessary for certain tasks. The tools are not contained in the vehicle but can be ordered under the number in parentheses. E.g.: bearing puller (15112017000)

During assembly, non-reusable parts (e.g. self-locking screws and nuts, seals and seal rings, O-rings, pins, lock washers) must be replaced by new parts.

In some instances, a thread locker (e.g. **Loctite**<sup>®</sup>) is required. The manufacturer instructions for use must be followed. After disassembly, clean the parts that are to be reused and check them for damage and wear. Change damaged or worn parts. After you complete the repair or service work, check the operating safety of the vehicle.

### 2.8 Environment

If you use your motorcycle responsibly, you can ensure that problems and conflicts do not occur. To protect the future of the motorcycle sport, make sure that you use your motorcycle legally, display environmental consciousness, and respect the rights of others. When disposing of used oil, other operating and auxiliary fluids, and used components, comply with the laws and regulations of the respective country.

Because motorcycles are not subject to the EU regulations governing the disposal of used vehicles, there are no legal regulations that pertain to the disposal of an end-of-life motorcycle. Your authorized KTM dealer will be glad to advise you.

# 2 SAFETY ADVICE

### 2.9 Owner's Manual

It is important that you read this Owner's Manual carefully and completely before making your first trip. The Owner's Manual contains useful information and many tips on how to operate, handle, and maintain your motorcycle. Only then will you find out how to customize the vehicle ideally for your own use and how you can protect yourself from injury.

Keep the Owner's Manual in an accessible place to enable you to refer to it as needed.

If you would like to know more about the vehicle or have questions on the material you read, please contact an authorized KTM dealer. The Owner's Manual is an important component of the vehicle and should be handed over to the new owner if the vehicle is sold.

# **3 IMPORTANT NOTES**

### 3.1 Manufacturer and implied warranty

The work specified in the service schedule may only be performed in an authorized KTM workshop and must be recorded in both the Service & Warranty Booklet and in **KTM Dealer.net**, otherwise any warranty coverage will become void. Damage or secondary damage caused by tampering with and/or conversions on the vehicle are not covered by the warranty.

Additional information on the manufacturer or implied warranty and the procedures involved can be found in the Service & Warranty Booklet.

### 3.2 Operating and auxiliary substances

### 🖌 Warning

Environmental hazard Improper handling of fuel is a danger to the environment.

Do not allow fuel to enter the groundwater, the soil, or the sewage system.

Use operating and auxiliary substances (such as fuel and lubricants) as specified in the Owner's Manual.

### 3.3 Spare parts, accessories

For your own safety, only use spare parts and accessory products that are approved and/or recommended by KTM and have them installed by an authorized KTM workshop. KTM accepts no liability for other products and any resulting damage or loss. Certain spare parts and accessory products are specified in parentheses in the descriptions. Your authorized KTM dealer will be glad to advise you.

The current **KTM PowerParts** for your vehicle can be found on the KTM website. International KTM Website: http://www.ktm.com

### 3.4 Service

A prerequisite for perfect operation and prevention of premature wear is that the service, care, and tuning work on the engine and chassis is properly carried out as described in the Owner's Manual. Incorrect adjustment and tuning of the engine and chassis can lead to damage and breakage of components.

Use of the vehicle under difficult conditions, such as on sand or on wet and muddy surfaces, can lead to considerably more rapid wear of components such as the drive train, brake system, or suspension components. For this reason, it may be necessary to inspect or replace parts before the next scheduled service.

It is imperative that you adhere to the stipulated run-in times and service intervals. If you observe these exactly, you will ensure a much longer service life for your motorcycle.

### 3.5 Figures

The figures contained in the manual may depict special equipment.

In the interest of clarity, some components may be shown disassembled or may not be shown at all. It is not always necessary to disassemble the component to perform the activity in question. Please follow the instructions in the text.

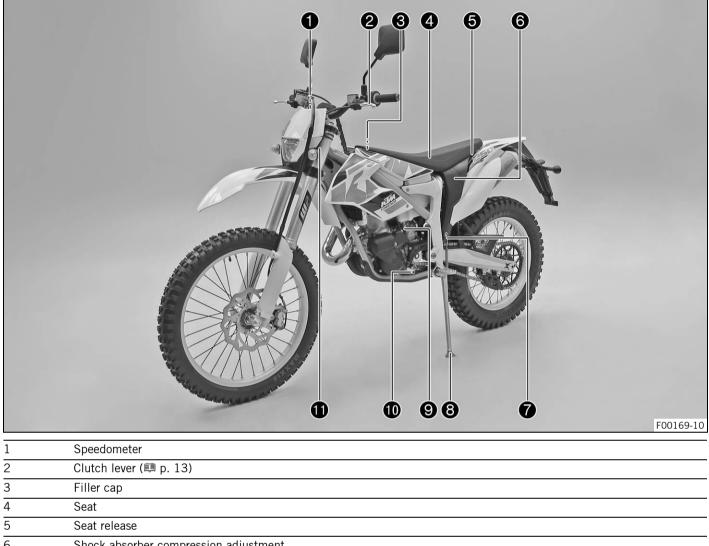

### 3.6 Customer service

Your authorized KTM dealer will be happy to answer any questions you may have on your vehicle and KTM.

A list of authorized KTM dealers can be found on the KTM website. International KTM Website: http://www.ktm.com

# 4 VIEW OF VEHICLE

### 4.1 View of vehicle, front left (example)

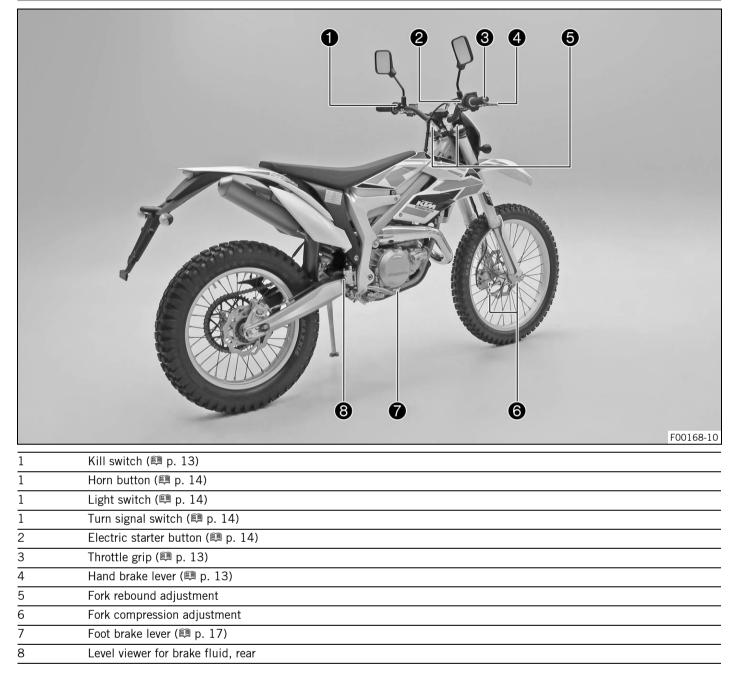

2	
3	Filler cap
4	Seat
5	Seat release
6	Shock absorber compression adjustment
7	Shock absorber rebound adjustment
8	Side stand (🕮 p. 17)
9	Fuel tap (📖 p. 16)
10	Shift lever (🕮 p. 17)

11 Steering lock (🕮 p. 18)

# 4 VIEW OF VEHICLE

### 4.2 View of vehicle, rear right (example)

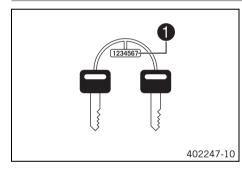

### 5 **SERIAL NUMBERS**

# 5.1 **Chassis number** 1 401946-10

The chassis number **1** is stamped on the right side of the steering head.

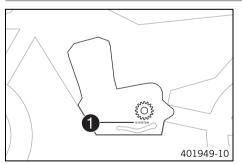

5.2 Type label (EU) The type label 1 is mounted on the frame at the front right. 402270-10

### 5.3 Key number

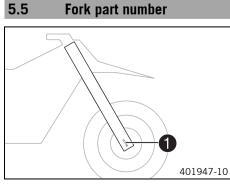

The key number 1 for the steering lock is stamped onto the key connector.

5.4 **Engine number** 

The engine number **1** is stamped on the left side of the engine under the engine sprocket.

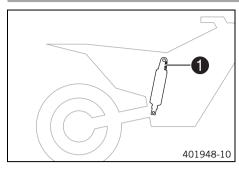

### Fork part number

The fork part number 1 is stamped on the inner side of the axle clamp.

# 5 SERIAL NUMBERS

### 5.6 Shock absorber article number

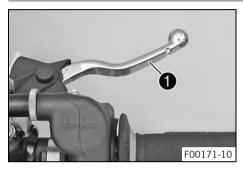

The shock absorber part number **1** is stamped on the top of the shock absorber above the adjusting ring towards the engine side.

### 6.1 Clutch lever

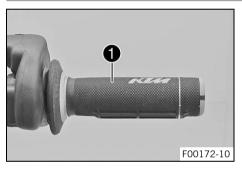

The clutch lever **1** is fitted on the left side of the handlebar. The clutch is hydraulically operated and self-adjusting.

6.2 Hand brake lever

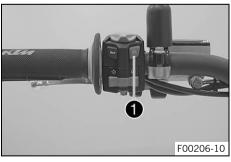

The hand brake lever **1** is fitted on the right side of the handlebar. The front brake is engaged using the hand brake lever.

6.3 Throttle grip

The throttle grip **1** is fitted on the right side of the handlebar.

6.4 Kill switch

(EU) The kill switch 1 is fitted on the left side of the handlebar.

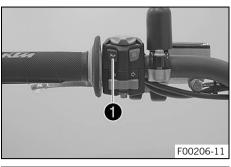

(US)

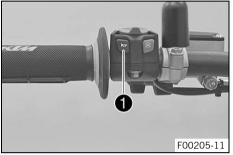

The kill switch **1** is fitted on the left side of the handlebar.

### Possible states

- Kill switch ⊗ is pressed In this position, the ignition circuit is interrupted, a running engine stops, and a non-running engine will not start.

### 6.5 Horn button

### (EU)

The horn button 1 is fitted on the left side of the handlebar.

### (US)

The horn button  $\mathbf{1}$  is fitted on the left side of the handlebar.

### **Possible states**

- Horn button ⊢ in neutral position
- Horn button ← pressed The horn is operated in this position.

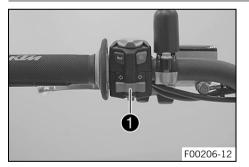

### 6.6 Light switch

The light switch **①** is fitted on the left side of the handlebar.

Possible states		
≣D	Low beam on – Light switch is in the central position. In this position, the low beam and tail light are switched on.	
ΞD	High beam on – The light switch is turned counterclockwise. In this position, the high beam and the tail light are switched on.	

### 6.7 Turn signal switch (EU)

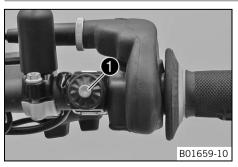

Turn signal switch 1 is fitted on the left side of the handlebar.

Possible states
-----------------

	Turn signal light off – Turn signal switch is in the central position.
+	Turn signal light, left, on – Turn signal switch is turned to the left.
	Turn signal light, right, on – Turn signal switch is turned to the right.

6.8 Electric starter button

Electric starter button **1** is fitted on the right side of the handlebar.

### Possible states

- Electric starter button (3) in basic position
- Electric starter button ③ pressed In this position, the electric starter is actuated.

### 6.9 Overview of indicator lamps (EU)

Possible states	
	High beam indicator light lights up blue – High beam is switched on.
FI	FI warning lamp (MIL) – inoperative
	Fuel level warning lamp – inoperative
	Turn signal indicator light flashes green – Turn signal is switched on.

### 6.10 Overview of indicator lamps (US)

Possible states		
	The high beam indicator light lights up blue – The high beam is switched on.	
FI	FI warning lamp (MIL) – inoperative	
	Fuel level warning lamp – inoperative	

### 6.11 Opening the filler cap

### Danger

Fire hazard Fuel is highly flammable.

The fuel in the fuel tank expands when warm and can escape if overfilled.

- Do not refuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

### Warning

Danger of poisoning Fuel is poisonous and a health hazard.

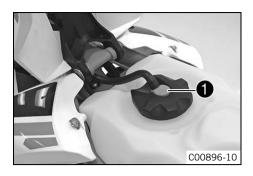

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.
- Keep fuels correctly in a suitable canister, and out of the reach of children.

### Warning Environme

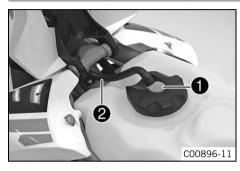

**Environmental hazard** Improper handling of fuel is a danger to the environment.

- Do not allow fuel to enter the groundwater, the soil, or the sewage system.

### Preparatory work

### 6.12 Closing the filler cap

### Main work

\_

Press release button 1, turn the filler cap counterclockwise, and lift it free.

### Main work

Replace the filler cap and turn clockwise until the release button **①** locks in place.

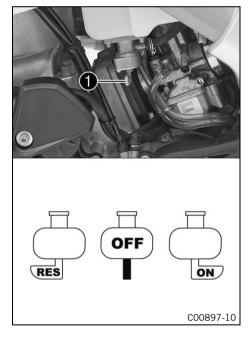

# • Info

Run the fuel tank breather hose 2 without kinks.

### Finishing work

– Lock the seat. (🕮 p. 47)

6.13 Fuel tap

The fuel tap is attached to the left side of the fuel tank.

Open or close the supply of fuel to the carburetor using the tap handle 1 on the fuel tap.

### Possible states

- Fuel supply closed **OFF** Fuel cannot flow from the fuel tank to the carburetor.
- Fuel supply open **ON** Fuel can flow from the fuel tank to the carburetor. The fuel tank empties down to the reserve level.
- Fuel reserve supply open **RES** Fuel can flow from the fuel tank to the carburetor. The fuel tank empties completely.

### 6.14 Choke

### Choke 1 is fitted on the left side of the carburetor.

Activating the choke function frees a drill hole in the carburetor through which the engine can draw extra fuel. This results in a richer fuel-air mixture, which is needed for a cold start.

### Info

If the engine is warm, the choke function must be deactivated.

### Possible states

- Choke function activated The choke lever is pulled out to the stop.
- Choke function deactivated The choke lever is pushed in to the stop.

# 6.15 Shift lever

23456

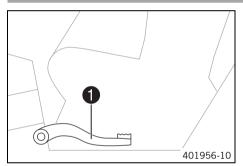

401950-11

Shift lever  $\bigcirc$  is mounted on the left side of the engine.

The gear positions can be seen in the photograph. The neutral or idle position is between the first and second gears.

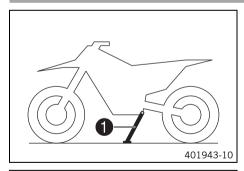

6.16 Foot brake lever

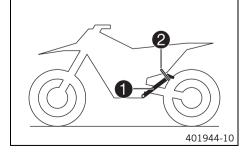

1

Foot brake lever **1** is located in front of the right footrest. The foot brake lever is used to activate the rear brake.

6.17 Side stand

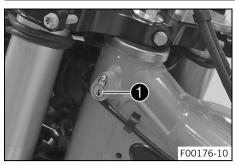

The side stand **1** is on the left side of the vehicle.

The side stand is used to park the motorcycle.

### lnfo

When you are riding, side stand 1 must be folded up and secured with rubber band 2.

### 6.18 **Steering lock**

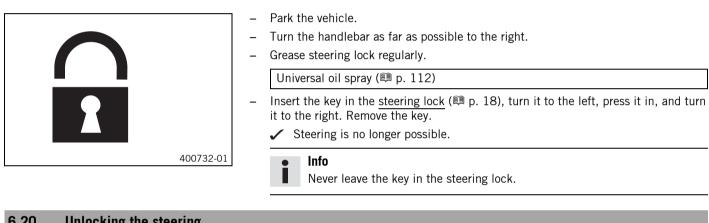

Steering lock **1** is fitted on the left side of the steering head. The steering lock is used to lock the steering. Steering, and therefore riding, is no longer possible.

### 6.19 Locking the steering

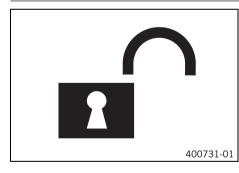

### Note

Danger of damage The parked vehicle can roll away or fall over.

Park the vehicle on a firm and level surface. \_

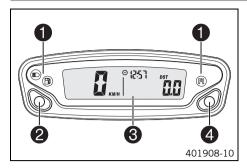

### 6.20 Unlocking the steering

- Insert the key in the steering lock (E p. 18), turn it to the left, pull it out, and turn \_ it to the right. Remove the key.
  - You can now steer the bike again. /
    - Info

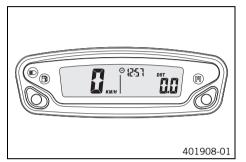

Never leave the key in the steering lock.

### 7.1 Overview

-	
1	Overview of indicator lamps (🕮 p. 15)
2	Left button
3	Display
4	Right button

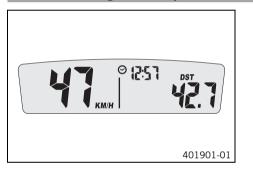

### 7.2 Activation

### Activating the speedometer

The speedometer is activated when one of the buttons is pressed or an impulse comes from the wheel speed sensor.

### 7.3 Message on the speedometer

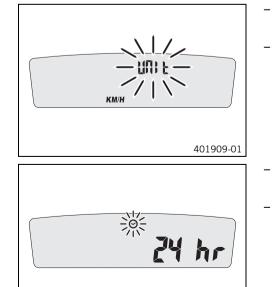

Possible states		
(C)	Battery voltage of the speedometer – Battery voltage of the speedometer is too low. Change the battery.	
~	Service – A service is due. Contact an authorized KTM workshop.	

### 7.4 Setting the speedometer

### Condition

The motorcycle is stationary.

Press both buttons for 3–5 seconds.

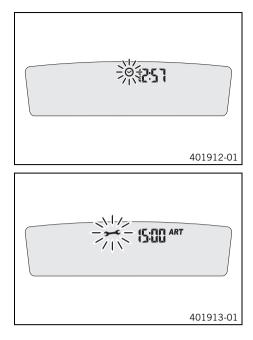

401911-01

- ✓ The Setup menu is displayed. The **UNIT** display flashes. Press one of the buttons to select **UNIT** for the speed in kilor
- Press one of the buttons to select **UNIT** for the speed in kilometers **KM/H** or miles **M/H**.

Wait for 5 seconds.

- $\checkmark$  The speedometer changes to the next menu item. The  $\odot$  symbol flashes.
- Press one of the buttons to select the 24h or 12h display of the clock.

- Wait for 5 seconds.
  - ✓ The speedometer changes to the next menu item. The Θ symbol flashes.

### Resetting the time

- Press the left button.
  - ✓ The value decreases.

### Advancing the time

- Press the right button.
  - The value increases.
- Wait for 5 seconds.
  - ✓ The speedometer changes to the next menu item. The ← symbol flashes.
- Set the service.

### Guideline

One-time service after	1 h
Service every	40 h

### Shortening the service interval

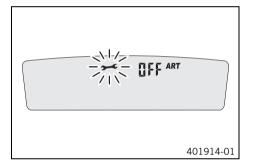

- Press the left button.
- The value decreases.

### Extending the service interval

- Press the right button.
  - The value increases.

### Switching off the service interval display

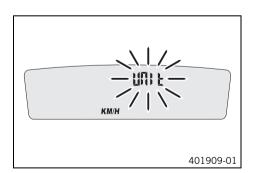

- Press and hold the left button.
  - ✓ off appears on the display.

### 7.5 Setting the kilometers or miles

• Info

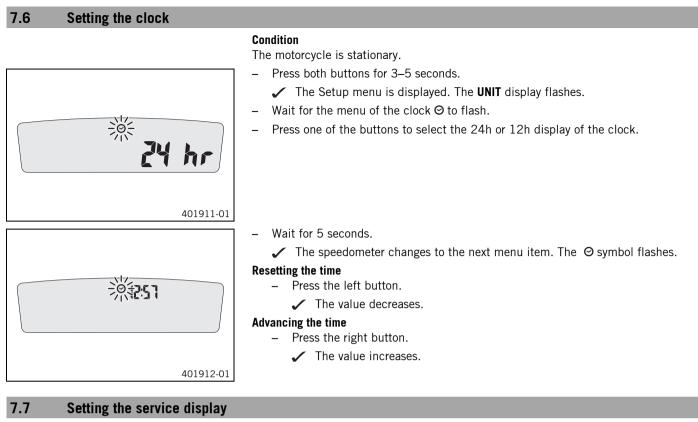

If the unit is changed, the value **ODO** is retained and converted accordingly.

### Condition

The motorcycle is stationary.

- Press both buttons for 3–5 seconds.
  - ✓ The Setup menu is displayed. The **UNIT** display flashes.
- Press one of the buttons to select UNIT for the speed in kilometers KM/H or miles M/H.

### Condition

The motorcycle is stationary.

- Press both buttons for 3–5 seconds.
  - ✓ The Setup menu is displayed. The **UNIT** display flashes.
- Set the service.

### Guideline

One-time service after	1 h
Service every	40 h

### Shortening the service interval

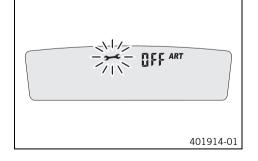

- Press the left button.
  - ✓ The value decreases.

### Extending the service interval

- Press the right button.
  - The value increases.

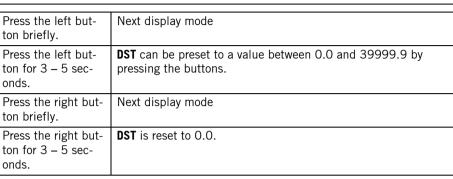

### Switching off the service interval display

- Press and hold the left button.
  - ✓ off appears on the display.

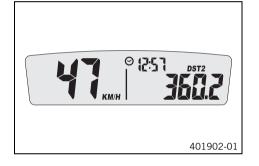

401913-01

7.8 Speed, time, and DST distant	ce 1
	<ul> <li>Press one of the buttons until DST appears on the speedometer.</li> <li>KM/H or M/H shows the speed.</li> <li>Shows the time.</li> <li>DST shows the distance since the last reset, such as between two refueling stops.</li> <li>Info</li> <li>If the value of 39999.9 is exceeded, DST is automatically reset to 0.0.</li> </ul>
401901-01	Press the left but- ton briefly

### 7.9 Speed, time, and DST2 distance 2

### Press one of the buttons until **DST2** appears on the speedometer.

**KM/H** or **M/H** shows the speed.  $\Theta$  shows the time.

**DST2** shows the distance 2 since the last reset, such as between two refueling stops.

### Info

If the value of 39999.9 is exceeded, **DST2** is automatically reset to 0.0.

Press the left but- ton briefly.	Next display mode
Press the left but- ton for 3 – 5 sec- onds.	<b>DST2</b> can be preset to a value between 0.0 and 39999.9 by pressing the buttons.
Press the right but- ton briefly.	Next display mode
Press the right but- ton for 3 – 5 sec- onds.	DST2 is reset to 0.0.

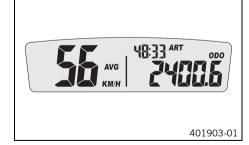

### 7.10 AVG average speed, ART operating hours, and ODO total distance covered

 $\ensuremath{\text{AVG}}$  shows the average speed since the last reset.

**ART** shows the operating hours. **ODO** shows the total distance covered.

Press the left but- ton briefly.	Next display mode
Press the left but- ton for 3 – 5 sec- onds.	The OPEN END WRENCH SYMBOL shows the remaining oper- ating hours until the next service is due.
Press the right but- ton briefly.	Next display mode
Press the right but- ton for 3 – 5 sec- onds.	AVG is reset to 0.0.

# 8 PREPARING FOR USE

### Advice on first use

- ∧ D
- Danger
  - **Danger of accidents** A rider who is not fit to ride poses a danger to him or herself and others.
  - Do not operate the vehicle if you are not fit to ride due to alcohol, drugs or medication.
  - Do not operate the vehicle if you are physically or mentally impaired.

### Warning

Risk of injury Missing or poor protective clothing presents an increased safety risk.

- Wear appropriate protective clothing such as helmet, boots, gloves as well as trousers and a jacket with protectors on all rides.
- Always wear protective clothing that is in good condition and meets the legal regulations.

### Warning

**Danger of crashing** Different tire tread patterns on the front and rear wheel impair the handling characteristic. Different tire tread patterns can make the vehicle significantly more difficult to control.

- Make sure that only tires with a similar tire tread pattern are fitted to the front and rear wheel.

### Warning

Danger of accidents An unadapted riding style impairs the handling characteristic.

- Adapt your riding speed to the road conditions and your riding ability.

### Warning

Danger of accidents The vehicle is not designed to carry passengers.

- Do not ride with a passenger.

### Warning

**Danger of accidents** The brake system fails in the event of overheating. If the foot brake lever is not released, the brake linings drag continuously.

- , 0 0
- Take your foot off the foot brake lever when you are not braking.

### Warning

Danger of accidents Total weight and axle loads influence the handling characteristic.

- Do not exceed the maximum permissible overall weight or the axle loads.

### Warning

Risk of misappropriation People who act without authorization endanger themselves and others.

- Do not leave the vehicle unattended if the engine is running.
- Protect the vehicle against access by unauthorized persons.

### Info

When using your motorcycle, remember that others may feel disturbed by excessive noise.

– Make sure that the pre-delivery inspection work has been carried out by an authorized KTM workshop.

- ✓ You receive a delivery certificate and the Service and Warranty Booklet at vehicle handover.
- Before your first trip, read the entire Owner's Manual carefully.
- Get to know the controls.

- Get used to handling the motorcycle on a suitable piece of land before undertaking a more challenging trip.

### Info

When off road, it is recommended that you are accompanied by another person on another vehicle so that you can help each other.

# 8 PREPARING FOR USE

- Try also to ride as slowly as possible and in a standing position to get a better feeling for the motorcycle.
- Do not make any off-road trips that exceed your ability and experience.
- Hold the handlebar firmly with both hands and keep your feet on the footrests when riding.
- If you carry luggage, make sure you secure it firmly as close as possible to the center of the vehicle and ensure even weight distribution between the front and rear wheels.

### Info

i

Guideline

\_

Motorcycles react sensitively to any changes of weight distribution.

Do not exceed maximum permissible weight and maximum permissible axle loads.

80 kg (617 lb.)
35 kg (298 lb.)
75 kg (386 lb.)
3

The spoke tension must be checked after half an hour of operation.

- Run the engine in. (🕮 p. 24)

### 8.2 Running in the engine

- During the running-in phase, do not exceed the specified engine performance.
  - Guideline

Maximum engine performance	
During the first operating hour	< 50 %
During the second operating hour	< 70 %
During the third operating hour	< 100 %

- Avoid fully opening the throttle!

### 25

### 9.1 Checks and maintenance work when preparing for use

### lnfo

Before riding the vehicle, always check its condition and operating safety. The vehicle must be in perfect technical condition when used.

- Check the electrical system.
- Check the brake fluid level of the front brake. (🕮 p. 63)

- Check that the brake system is functioning properly.

- Check the tire condition. (🕮 p. 73)

- Clean the dust boots of the fork legs. (🕮 p. 40)
- Bleed the fork legs. (🕮 p. 39)
- Check the air filter.
- Check the settings of all controls and ensure that they can be operated smoothly.
- Check all screws, nuts, and hose clamps regularly for tightness.
- Check the fuel supply.

### 9.2 Starting

### Danger

Danger of poisoning Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.

### Note

Engine damage High revving speed with a cold engine negatively impacts the lifespan of the engine.

Always run the engine warm at a low speed.

### Info

If the motorcycle is unwilling to start, the cause can be old fuel in the float chamber. The flammable elements of the fuel evaporate after a long time of standing.

If the float chamber is filled with fresh fuel, the engine starts immediately.

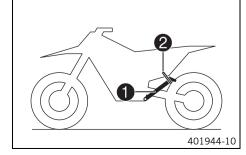

### The motorcycle has been out of use for more than 1 week

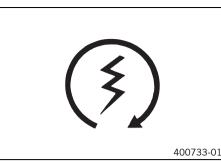

- Empty the carburetor float chamber. 

   (III) p. 91)
- Turn handle **①** of the fuel tap to the **ON** position. (Figure CO0897-10
  <sup>IIII</sup> p. 16) ✓ Fuel can flow from the fuel tank to the carburetor.
- Take the motorcycle off of side stand ① and secure the side stand with rubber band ②.
- Shift gear to neutral.

### The engine is cold

- Pull the choke lever out as far as possible.

Press the electric starter button.

### Info

Press the electric starter button for at most 5 seconds. Wait for a least 5 seconds before trying again. Do not open the throttle to start.

### 9.3 Starting off

Info

When you are riding, the side stand must be folded up and secured with the rubber band.

- Pull the clutch lever, engage 1st gear, release the clutch lever slowly and simultaneously open the throttle carefully.

9.4 Shifting,	riding
---------------	--------

### Warning

Danger of accidents If you change down at high engine speed, the rear wheel blocks and the engine races.

Do not change into a low gear at high engine speed.

### lnfo

If you hear unusual noises while riding, stop immediately, switch off the engine and contact an authorized KTM workshop. First gear is used for starting off or for steep inclines.

- When conditions allow (incline, road situation, etc.), you can shift into a higher gear. To do so, release the throttle while simultaneously pulling the clutch lever, shift into the next gear, release the clutch, and open the throttle.
- After reaching maximum speed by fully opening the throttle grip, turn the throttle back so it is <sup>3</sup>/<sub>4</sub> open. This will barely reduce the speed but fuel consumption will be considerably lower.
- Always open the throttle only as much as the engine can handle abrupt throttle opening increases fuel consumption.
- To shift down, brake and close the throttle at the same time.
- Pull the clutch lever and shift into a lower gear, release the clutch lever slowly, and open the throttle or shift again.
- Switch off the engine if you expect to be standing for a long time.
  - Guideline

≥ 2 min

- Avoid frequent and longer slipping of the clutch. As a result the engine oil, engine and cooling system heat up.
- Ride with a lower engine speed instead of with a high engine speed and a slipping clutch.

### 9.5 Applying the brakes

### Warning

- **Danger of accidents** Excessively forceful application of the brakes blocks the wheels.
- Adjust application of the brakes to the respective riding situation and riding surface conditions.

Warning

Warning

**Danger of accidents** A spongy pressure point on the front or rear brake reduces braking efficiency.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

Danger of accidents Moisture and dirt impair the brake system.

- Brake carefully several times to dry out and remove dirt from the brake linings and the brake discs.
- On sandy, wet or slippery surfaces, use the rear brake.

- Braking should always be completed before you go into a bend. Change down to a lower gear appropriate to your road speed.

### 9.6 Stopping, parking

### Warning

- **Risk of misappropriation** People who act without authorization endanger themselves and others.
- Do not leave the vehicle unattended if the engine is running.
- Protect the vehicle against access by unauthorized persons.

Danger of burns Some vehicle components become very hot when the vehicle is operated.

- Do not touch any parts such as the exhaust system, radiator, engine, shock absorber, or brake system before the vehicle parts have cooled down.
- Let the vehicle parts cool down before you perform any work on the vehicle.

### Note

Danger of damage The parked vehicle can roll away or fall over.

- Park the vehicle on a firm and level surface.

### Note

Fire hazard Hot vehicle components pose a fire hazard and explosion risk.

- Do not park the vehicle near to materials which are highly flammable or explosive.
- Allow the vehicle to cool down before covering it.

### Note

**Material damage** The vehicle may be damaged by incorrect procedure when parking. Significant damage may be caused if the vehicle rolls away or falls over.

The components for parking the vehicle are designed only for the weight of the vehicle.

- Park the vehicle on a firm and level surface.
- Ensure that nobody sits on the vehicle when the vehicle is parked on a stand.
- Apply the brakes on the motorcycle.
- Shift gear to neutral.
- − Press and hold the kill switch ⊗ while the engine is idling until the engine stops.
- Turn handle 1 of the fuel tap to the OFF position. (Figure C00897-10 p. 16)
- Park the motorcycle on firm ground.

### 9.7 Transport

### Note

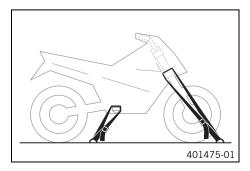

Danger of damage The parked vehicle can roll away or fall over.

- Park the vehicle on a firm and level surface.

### Note

Fire hazard Hot vehicle components pose a fire hazard and explosion risk.

- Do not park the vehicle near to materials which are highly flammable or explosive.
- Allow the vehicle to cool down before covering it.

- Switch off the engine.
- Use tension belts or other suitable devices to secure the motorcycle against accidents or falling over.

### 9.8 Refueling

### 1 Danger

Fire hazard Fuel is highly flammable.

The fuel in the fuel tank expands when warm and can escape if overfilled.

- Do not refuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

### Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.

### Note

Material damage Inadequate fuel quality causes the fuel filter to quickly become clogged.

In some countries and regions, the available fuel quality and cleanliness may not be sufficient. This will result in problems with the fuel system.

- Refuel only with clean fuel that meets the specified standards. (Your authorized KTM workshop will be glad to help.)

# × V

### Warning

- **Environmental hazard** Improper handling of fuel is a danger to the environment.
- Do not allow fuel to enter the groundwater, the soil, or the sewage system.

### Preparatory work

- Switch off the engine.
- Fold the seat up. (🕮 p. 47)
- Open the filler cap. (🕮 p. 15)

### Main work

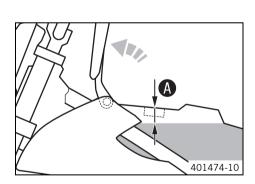

Fill the fuel tank with fuel up to measurement A.

### Guideline

Measurement of		30 mm (1.18 in)	
Total fuel tank capacity, approx.	7.0 I (1.85 US gal)	Super unleaded (95 octane) mixed with 2-stroke engine oil (1:80) (	

### Finishing work

- Close the filler cap. (
  p. 16)
- Lock the seat. (🕮 p. 47)

# **10 SERVICE SCHEDULE**

# 10.1 Service schedule

	Once after 1 operating hour
Check that the electrical equipment is functioning properly.	0
Check and charge the battery.	
Check the front brake linings. ( p. 64)

### 11.1 Checking the basic chassis setting with the rider's weight

### • Info

When adjusting the basic chassis setting, first adjust the shock absorber and then the fork.

- For optimal motorcycle riding characteristics and to avoid damage to forks, shock absorbers, swingarm and frame, the basic settings of the suspension components must match the rider's weight.
- As delivered, KTM offroad motorcycles are adjusted for an average rider's weight (with full protective clothing).

Guideline

Standard rider weight	75 85 kg (165 187 lb.)
-----------------------	------------------------

- If the rider's weight is above or below this range, the basic setting of the suspension components must be adjusted accordingly.
- Small weight differences can be compensated by adjusting the spring preload, but in the case of large weight differences, the springs must be replaced.

### 11.2 Compression damping of the shock absorber

The compression damping of the shock absorber is divided into two ranges: high-speed and low-speed.

High-speed and low-speed refer to the compression speed of the rear wheel suspension and not to the vehicle speed. The high-speed setting, for example, has an effect on the landing after a jump: the rear wheel suspension compresses more quickly. The low-speed setting, for example, has an effect when riding over long ground swells: the rear wheel suspension compresses more

slowly. These two ranges can be adjusted separately, although the transition between high-speed and low-speed is gradual. Thus, changes in the high-speed range affect the compression damping in the low-speed range and vice versa.

### 11.3 Adjusting the low-speed compression damping of the shock absorber

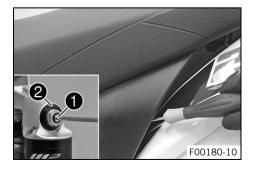

### Caution

**Risk of injury** Parts of the shock absorber will fly off if the shock absorber is disassembled incorrectly. The shock absorber is filled with highly compressed nitrogen.

- Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

### **I**nfo

The low-speed setting can be seen during the slow to normal compression of the shock absorber.

- Turn adjusting screw 1 clockwise with a screwdriver up to the last perceptible click.

Turn counterclockwise by the number of clicks corresponding to the shock absorber type.

Guideline

Compression damping, low-speed

impression damping, low-speed	
Comfort	20 clicks
Standard	15 clicks
Sport	10 clicks

Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

### 11.4

### Adjusting the high-speed compression damping of the shock absorber

### Caution

**Risk of injury** Parts of the shock absorber will fly off if the shock absorber is disassembled incorrectly. The shock absorber is filled with highly compressed nitrogen.

- Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

### Info

The high-speed setting can be seen during the fast compression of the shock absorber.

### **Preparatory work**

- Raise the motorcycle with the lift stand. (I p. 39)
- Fold the seat up. (
  p. 47)
- Remove the shock absorber. 🔌 (🕮 p. 46) \_

### Main work

Turn adjusting screw **1** all the way clockwise with a socket wrench.

Do not loosen fitting **2**.

Turn counterclockwise by the number of turns corresponding to the shock absorber type.

### Guideline

Compression damping, high-speed	
Comfort	2.5 turns
Standard	2 turns
Sport	1 turn

### Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

### **Finishing work**

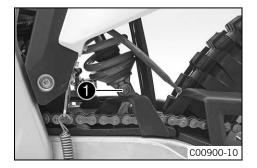

- Install the shock absorber. 🔌 (🕮 p. 46)
- Lock the seat. (
  p. 47)
- Remove the motorcycle from the lift stand. (
  p. 39)

### 11.5 Adjusting the rebound damping of the shock absorber

### Caution

Risk of injury Parts of the shock absorber will fly off if the shock absorber is disassembled incorrectly. The shock absorber is filled with highly compressed nitrogen.

Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

- Turn adjusting screw 1 clockwise up to the last perceptible click. Turn counterclockwise by the number of clicks corresponding to the shock absorber
- type.

### Guideline

Rebound damping	
Comfort	20 clicks
Standard	15 clicks
Sport	10 clicks

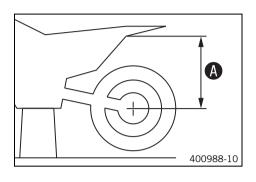

### Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

### 11.6 Measuring rear wheel sag unloaded

### Preparatory work

Raise the motorcycle with the lift stand. (
p. 39) \_

### Main work

- Measure the distance as vertical as possible between the rear axle and a fixed \_ point, for example, a mark on the rear fairing.
- Note down the value as dimension  $\mathbf{A}$ .

### **Finishing work**

Remove the motorcycle from the lift stand. (IP p. 39) \_

# 11.7 Checking the static sag of the shock absorber A B 400989-10

### Measure distance (A) of rear wheel unloaded. (IIII p. 33) \_

- Hold the motorcycle upright with the aid of an assistant. \_
- Measure the distance between the rear axle and the fixed point again. \_
- Note down the value as dimension  $\mathbf{B}$ . \_

### Info

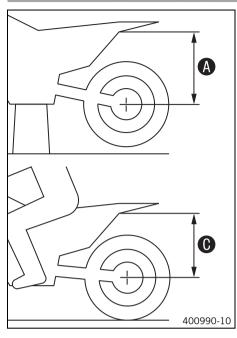

The static sag is the difference between measurements (A) and (B).

### Check the static sag.

Static sag 15 mm (0.59 in)
----------------------------

- If the static sag is less or more than the specified value: »
  - Adjust the spring preload of the shock absorber. 🔌 (🕮 p. 34) \_

### 11.8 Checking the riding sag of the shock absorber

### - Measure distance 🚯 of rear wheel unloaded. (🕮 p. 33)

- With another person holding the motorcycle, the rider, wearing full protective clothing, sits on the seat in a normal sitting position (feet on footrests) and bounces up and down a few times.
- ✓ The rear wheel suspension levels out.
- Another person now measures the distance between the rear axle and a fixed point.
- Note down the value as dimension O.

The riding sag is the difference between measurements (A) and (C).

Check the riding sag.

Riding sag 80 mm (3.15 in)
----------------------------

- » If the riding sag differs from the specified measurement:
  - Adjust the riding sag. 🔧 (🕮 p. 35)

### 11.9 Adjusting the spring preload of the shock absorber

### Caution

**Risk of injury** Parts of the shock absorber will fly off if the shock absorber is disassembled incorrectly. The shock absorber is filled with highly compressed nitrogen.

- Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

### lnfo

Before changing the spring preload, make a note of the present setting, e.g., by measuring the length of the spring.

### Preparatory work

- Fold the seat up. (🕮 p. 47)
- Remove the shock absorber. 🔌 (🕮 p. 46)
- After removing the shock absorber, clean it thoroughly.

### Main work

\_

- Loosen screw 🚺.
- Turn adjusting ring 2 until the spring is no longer under tension.

Hook wrench (T106S)

- Measure the overall spring length while the spring is not under tension.
- Tighten the spring by turning adjusting ring 2 to measurement A.
   Guideline

G	lei	ine	;

Spring preload		
Comfort	8 mm (0.31 in)	
Standard	8 mm (0.31 in)	
Sport	8 mm (0.31 in)	

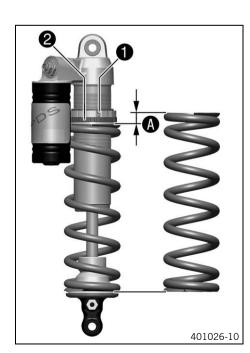

# Info Dep

Depending on the static sag and/or the riding sag, it may be necessary to increase or decrease the spring preload.

### 🗧 Tighten screw 🚺.

Guideline

	ſ	Screw, shock absorber adjusting ring	M5	5 Nm (3.7 lbf ft)
--	---	--------------------------------------	----	-------------------

#### **Finishing work**

- − Install the shock absorber. ◄ (🕮 p. 46)
- Lock the seat. (🕮 p. 47)
- Remove the motorcycle from the lift stand. (
  P. 39)

#### 11.10 Adjusting the riding sag 🔧

#### **Preparatory work**

- Fold the seat up. (🕮 p. 47)
- Remove the shock absorber. 

   (Image: Participation of the shock absorber)
   (Image: Participation of the shock absorber)
   (Image: Participation of the shock absorber)
- After removing the shock absorber, clean it thoroughly.

#### Main work

Choose and mount a suitable spring.

Guideline	
Spring designation	
Weight of rider: 65 75 kg (143 165 lb.)	(61/59) 55-215
Weight of rider: 75 85 kg (165 187 lb.)	(61/59) 55/63/71-215
Weight of rider: 85 95 kg (187 209 lb.)	(61/59) 58/62/74-215

#### Info

The spring rate is shown on the outside of the spring. Smaller weight differences can be compensated by changing the spring preload.

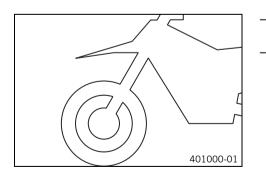

#### **Finishing work**

- Install the shock absorber. 🔧 (🕮 p. 46)
- Lock the seat. (🕮 p. 47)
- Check the static sag of the shock absorber. (
  p. 33)
- Check the riding sag of the shock absorber. (🕮 p. 34)

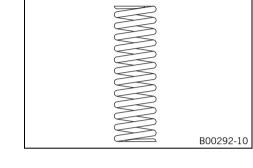

#### 11.11 Checking the basic setting of the fork

e Info

For various reasons, no exact riding sag can be determined for the fork.

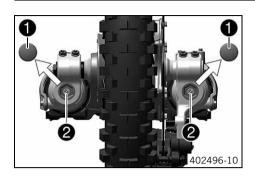

- As with the shock absorber, smaller differences in the rider's weight can be compensated by the spring preload.
- However, if the fork is often overloaded (hard end stop on compression), harder springs must be fit to avoid damage to the fork and frame.

#### 11.12 Adjusting the compression damping of the fork

#### • Info

The hydraulic compression damping determines the fork suspension behavior.

Remove protection caps 1.

Turn adjusting screws 😢 clockwise all the way.

Adjusting screws **2** are located at the bottom end of the fork legs. Make the same adjustment on both fork legs.

Turn counterclockwise by the number of clicks corresponding to the fork type.
 Guideline

#### Guideini

Compression damping	
Comfort	25 clicks
Standard	20 clicks
Sport	15 clicks

#### Info

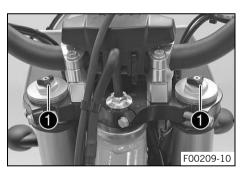

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

Mount protection caps **1**.

#### 11.13 Adjusting the rebound damping of the fork

#### Info

The hydraulic rebound damping determines the fork suspension behavior.

(EU)

Turn adjusting screws ① clockwise all the way.

#### • Info Adiu

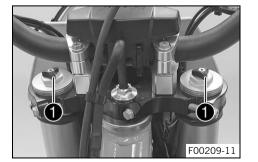

Adjusting screws **1** are located at the top end of the fork legs. Make the same adjustment on both fork legs.

Turn counterclockwise by the number of clicks corresponding to the fork type.
 Guideline

Rebound damping

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

#### (US)

- Turn adjusting screws 1 clockwise all the way.

Adjusting screws **1** are located at the top end of the fork legs. Make the same adjustment on both fork legs.

- Turn counterclockwise by the number of clicks corresponding to the fork type.

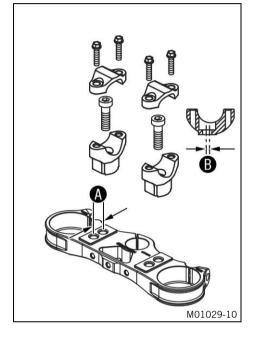

#### Guideline

Rebound damping	
Comfort	25 clicks
Standard	20 clicks
Sport	15 clicks

#### Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

#### 11.14 Handlebar position

On the upper triple clamp, there are two holes at a distance of $oldsymbol{A}$ to each other.	
---	--

 Hole distance
 15 mm (0.59 in)

 The holes on the handlebar supports are placed at a distance of **B** from the center.

Hole distance **B** 3.5 mm (0.138 in)

The handlebar supports can be mounted in four different positions.

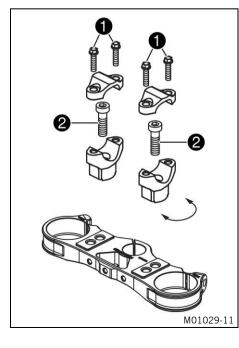

#### 11.15 Adjusting the handlebar position 🔧

#### Warning

Danger of accidents A repaired handlebar poses a safety risk.

If the handlebar is bent or straightened, the material becomes fatigued. The handlebar may break as a result.

- Change the handlebar if the handlebar is damaged or bent.

Remove screws **1**. Remove the handlebar clamps. Take off the handlebar and lay it to one side.

#### Info

Cover the components to protect them against damage. Do not bend the cables and lines.

- Remove screws 2. Take off the handlebar supports.
- Move the handlebar supports into the desired position. Mount and tighten screws 2.

#### Guideline

Screw, handlebar support	M10	40 Nm (29.5 lbf ft)	Loctite <sup>®</sup> 243™
<ul> <li>Info</li> </ul>			

#### Position the left and right handlebar supports evenly.

Position the handlebar.

Make sure cables and wiring are positioned correctly.

- Position the handlebar clamps. Mount screws 1 and tighten evenly.

#### Guideline

Screw, handlebar clamp	M8	20 Nm (14.8 lbf ft)

#### • Info Mak

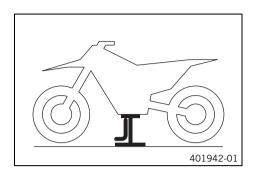

Make sure the gap width is even.

#### 12.1 Raising the motorcycle with the lift stand

#### Note

**Danger of damage** The parked vehicle can roll away or fall over.

Park the vehicle on a firm and level surface.

Raise the motorcycle at the frame underneath the engine.

Lift stand (78929955100)

\_

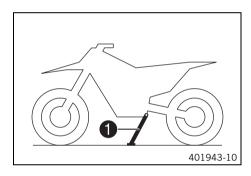

- Neither wheel is in contact with the ground. 1
- Secure the motorcycle against falling over.

#### 12.2 Removing the motorcycle from the lift stand

#### Note

**Danger of damage** The parked vehicle can roll away or fall over.

Park the vehicle on a firm and level surface.

#### Remove the motorcycle from the lift stand. \_

- Remove the lift stand.
- \_ To park the motorcycle, press side stand **1** to the ground with your foot and lean the motorcycle on it.

## Info

When you are riding, the side stand must be folded up and secured with the rubber band.

#### 12.3 Bleeding the fork legs

#### **Preparatory work**

Raise the motorcycle with the lift stand. (
p. 39)

#### Main work

\_

Release bleeder screws 1.

- ✓ Any excess pressure escapes from the interior of the fork.
- Tighten the bleeder screws.

#### **Finishing work**

Remove the motorcycle from the lift stand. (
p. 39)

M00475-10

#### 12.4 Cleaning the dust boots of the fork legs

#### Preparatory work

- Raise the motorcycle with the lift stand. (IP p. 39)
- Remove the fork protector. (🕮 p. 41)

#### Main work

Push dust boots 1 of both fork legs downward.

#### Info

The dust boots remove dust and coarse dirt particles from the inside fork tubes. Over time, dirt can accumulate behind the dust boots. If this dirt is not removed, the shaft seal rings behind can start to leak.

#### Warning

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.
- Clean and oil the dust boots and inner fork tubes of both fork legs.

Universal oil spray (🕮 p. 112)

- Press the dust boots back into their installation position.
- Remove excess oil.

#### **Finishing work**

- Install the fork protector. (
  p. 42)

#### 12.5 Removing the fork legs 🔌

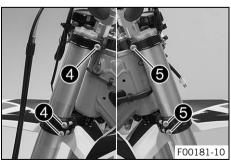

#### Preparatory work

- Press and hold the kill switch  $\otimes$  while the engine is idling until the engine stops.
- Remove the headlight mask with the headlight. (🕮 p. 80)
- Raise the motorcycle with the lift stand. (I p. 39)
- − Remove the front wheel. ◀ (ജ p. 71)

#### Main work

\_

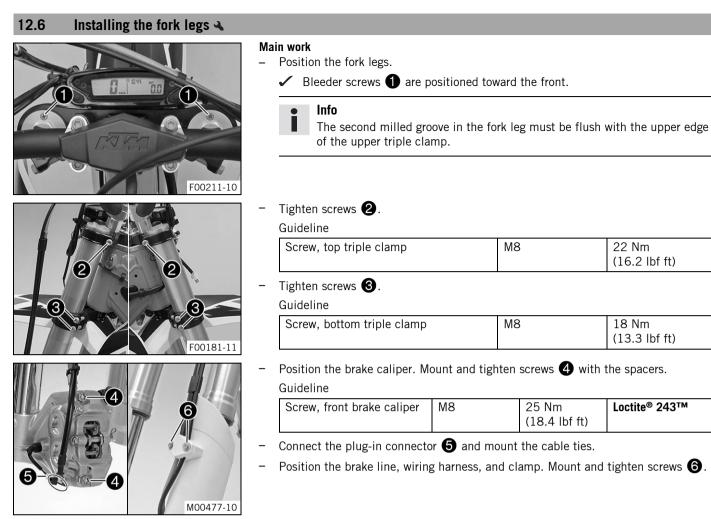

- Remove screws **1** and take off the clamp.
- Remove the cable tie(s) and detach plug-in connector **2**.
- Remove screws 3 and the spacers and take off the brake caliper.
- Allow the brake caliper and brake line to hang tension-free to the side.

- Release screws **4**. Take out the left fork leg.
  - Release screws **5**. Take out the right fork leg.

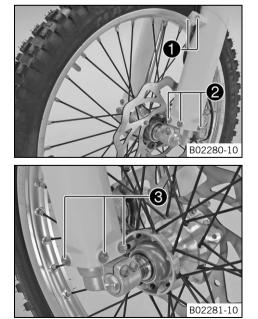

#### **Finishing work**

\_

- Install the front wheel. 

   (Image: p. 71)

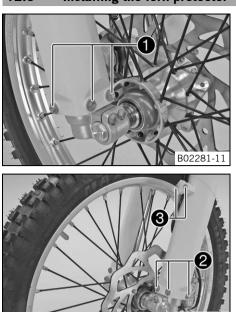

#### 12.7 Removing the fork protector

- Remove screws 1. Take off the clamp.
  - Remove screws 2 on the left fork leg. Take off the fork protector.

Remove screws 3 on the right fork leg. Take off the fork protector.

Position the fork protection on the right fork leg. Mount and tighten screws lacksquare. Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
---------------------------	----	--------------------

Position the fork protection on the left fork leg. Mount and tighten screws  $oldsymbol{2}$  . Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
---------------------------	----	--------------------

- Position the brake line, wiring harness, and clamp. Mount and tighten screws 3.

#### 12.9 Removing the lower triple clamp 🔌

B02280-11

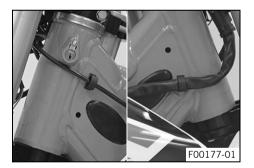

#### Preparatory work

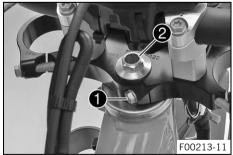

- Press and hold the kill switch  $\otimes$  while the engine is idling until the engine stops.
- Remove the headlight mask with the headlight. (
  p. 80)
- Raise the motorcycle with the lift stand. (I p. 39)
- Remove the front wheel. 

   (Image: p. 71)
- − Remove the fork legs. ◄ ( p. 40)
- Remove the front fender. (🕮 p. 47)

#### Main work

- Remove the cable holder on both sides in front of the radiator.

- Pull the fuel tank breather hose out of the steering head screw.
- Remove screw 1.
- Remove screw **2**, take off the upper triple clamp with the handlebar and set it aside.

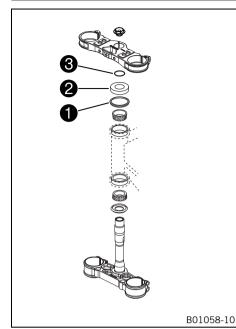

Info

\_

Cover the components to protect them against damage. Do not kink the cables and lines.

- Remove O-ring 3. Remove protective ring 4.
- Remove the lower triple clamp with the steering stem.
- Take out the upper steering head bearing.

#### 12.10 Installing the lower triple clamp 🔧

#### Main work

- Clean the bearing and sealing elements, check for damage, and grease. \_
  - High viscosity grease (🕮 p. 111)
- Insert the lower triple clamp with the steering stem. Mount the upper steering head \_ bearing.
- Check whether upper steering head seal **1** is correctly positioned. \_
- Slide on protective ring **2** and O-ring **3**. \_

- Position the upper triple clamp with the handlebar. \_
- Mount screw **4** but do not tighten yet. \_
- Position the clutch line and wiring harness.
- Position the fork legs.
  - ✓ Bleeder screws **⑤** are positioned toward the front.

F00213-10

The second milled groove in the fork leg must be flush with the upper edge of the upper triple clamp.

#### Tighten screws **6**.

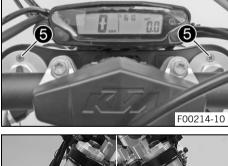

#### Guideline

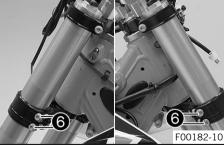

Screw, bottom triple clamp	M8	18 Nm
		(13.3 lbf ft)

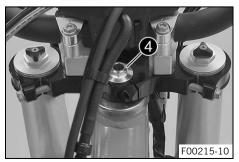

#### Tighten screw **4**.

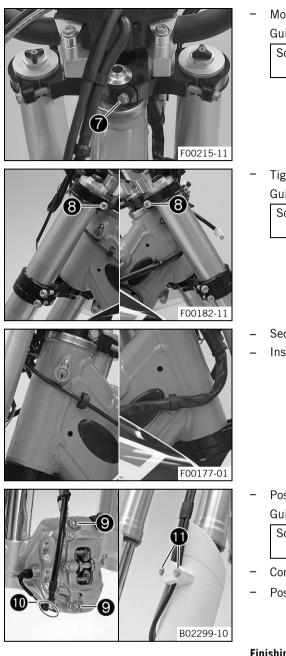

Guideline

Screw, top steering head	M20x1.5	12 Nm (8.9 lbf ft)
--------------------------	---------	--------------------

Mount and tighten screw 🕜.

#### Guideline

Screw, top steering stem	M8	17 Nm (12.5 lbf ft)	Loctite <sup>®</sup> 243™

#### Tighten screws 8.

Guideline		
Screw, top triple clamp	M8	22 Nm (16.2 lbf ft)

- Secure the cable holder on both sides.
- Insert the fuel tank breather hose into the steering head screw.

Screw, front brake caliper	M8	25 Nm (18.4 lbf ft)	Loctite <sup>®</sup> 243™
		(10.116110)	

- Connect plug-in connector 🔟 and mount the cable ties.
- Position the brake line, wiring harness, and clamp. Mount and tighten screws 🕕.

#### **Finishing work**

- Install the front wheel. 🔌 (🕮 p. 71)
- Install the headlight mask with the headlight. (IP p. 81)
- Check that the wiring harness, throttle cables, and brake and clutch lines can move freely and are routed correctly.
- Check the steering head bearing play. (
  p. 44)
- Check the headlight setting. (🕮 p. 83)

#### 12.11 Checking the steering head bearing play

#### Warning

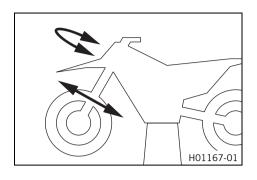

Info

**Danger of accidents** Incorrect steering head bearing play impairs the handling characteristic and damages components.

- Correct incorrect steering head bearing play immediately. (Your authorized KTM workshop will be glad to help.)

#### •

If the bike is ridden with play in the steering head bearing, the bearing and the bearing seats in the frame can become damaged over time.

#### **Preparatory work**

Raise the motorcycle with the lift stand. (
p. 39)

#### Main work

Move the handlebar to the straight-ahead position. Move the fork legs to and fro in the direction of travel.

No play should be noticeable in the steering head bearing.

- If there is noticeable play present:
- Adjust the steering head bearing play. 🔌 (🕮 p. 45)
- Move the handlebar to and fro over the entire steering range.

The handlebar must be able to move easily over the entire steering range. No resting locations should be noticeable.

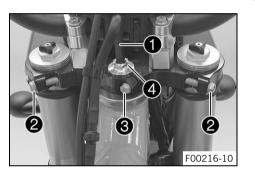

- If click positions are noticeable:

  - Check the steering head bearing and replace if required.

#### **Finishing work**

Remove the motorcycle from the lift stand. (
p. 39)

#### 12.12 Adjusting the steering head bearing play &

#### **Preparatory work**

Raise the motorcycle with the lift stand. (IP p. 39)

#### Main work (EU)

## 12.14 Removing the shock absorber 🔌

#### **Preparatory work**

- Raise the motorcycle with the lift stand. (I p. 39)
- Fold the seat up. (🕮 p. 47)

#### Main work

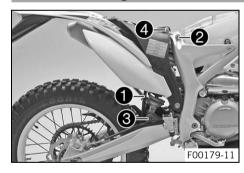

\_

#### lain work

- Remove screw 1
- Remove screw 2 and lower the rear wheel with the swing arm as far as possible without blocking the rear wheel. Fix the rear wheel in this position.
- Remove screw 3.
- Push splash protector 4 to the side and remove the shock absorber.

#### 12.15 Installing the shock absorber 🔦

#### Main work

Push splash protector 1 to the side and position the shock absorber. Mount and tighten screw 2.

Guideline

Screw, top shock absorber	M12	80 Nm (59 lbf ft)	Loctite <sup>®</sup> 2701™
Mount and tighten screw 3.			
Guideline			

Screw, bottom shock	M12	80 Nm	Loctite <sup>®</sup> 2701™
absorber		(59 lbf ft)	

#### Info

The heim joint for the shock absorber at the swingarm is Teflon coated. It must not be greased with grease or with any other lubricants. Lubricants dissolve the Teflon coating, thereby drastically reducing the service life.

Mount and tighten screw 4.

Guideline

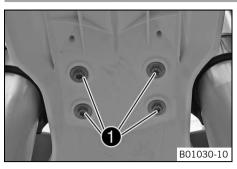

Screw, upper subframe	M10	45 Nm (33.2 lbf ft)	Loctite <sup>®</sup> 243™
-----------------------	-----	------------------------	---------------------------

#### **Finishing work**

- Lock the seat. (🕮 p. 47)

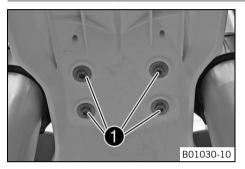

\_

#### 12.16 Removing the front fender

#### Remove screws **①**. Remove the front fender.

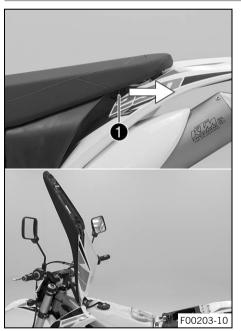

#### 12.17 Installing the front fender

# Position the front fender. Mount and tighten screws ①. Guideline

Rem	aining screws, chassis	M6	10 Nm (7.4 lbf ft)
i	<b>Info</b> Make sure the holding lugs	engage in the headl	ght mask.

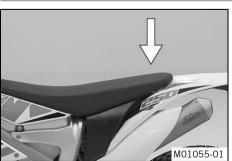

#### 12.18 Folding the seat up

#### - Push the release lever 1 in the direction of the arrow.

- Lift the seat and fold it up.

#### 12.19 Locking the seat

- Fold down the seat and push it down.
  - The seat engages with an audible click.
- Check that the seat is correctly locked.

#### Note

**Engine damage** Unfiltered intake air has a negative effect on the service life of the engine. Dust and dirt will enter the engine without an air filter.

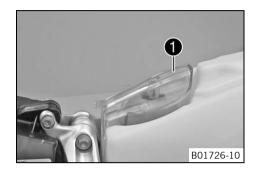

Never start to use the vehicle without an air filter.

#### Preparatory work

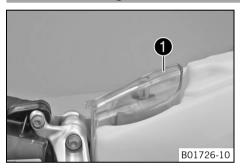

Main work

Fold the seat up. (
p. 47)

Pull air filter housing 1 up and off.

#### 12.21 Installing the air filter housing 🔧

#### Main work

If the air filter housing is not mounted correctly, dust and dirt may enter the engine and cause damage.

#### **Finishing work**

- Lock the seat. (🕮 p. 47)

#### 12.22 Removing the air filter 🔌

#### Note

**Engine damage** Unfiltered intake air has a negative effect on the service life of the engine.

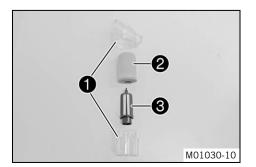

Dust and dirt will enter the engine without an air filter.

- Never start to use the vehicle without an air filter.

Warning Environmental hazard Hazardous substances cause environmental damage.

Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

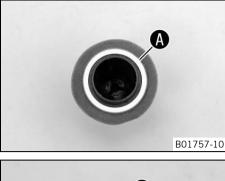

#### **Preparatory work**

#### Main work

- Lightly press the air filter housing together and open in a counterclockwise direction.
- Remove the air filter 2 with the air filter support 3.
- Take off air filter 2 from air filter support 3.

#### 12.23 Installing the air filter 🔌

#### Main work

\_

- Mount the clean air filter onto the air filter support.
- Apply grease to the air filter around area 🚯

Long-life grease (🕮 p. 111)

Insert both parts together and close air filter housing  $\mathbf{1}$  by turning clockwise.

## • Info

If the air filter is not mounted correctly, dust and dirt may enter the engine and cause damage.

#### **Finishing work**

- 🛛 Install the air filter housing. 🔌 (🕮 p. 48)
- Lock the seat. (🕮 p. 47)

#### 12.24 Cleaning the air filter and air filter housing 🔌

#### g Warning

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

#### Info

Do not clean the air filter with fuel or petroleum since these substances attack the foam.

#### Preparatory work

- 🗉 Fold the seat up. (🕮 p. 47)
- Remove the air filter housing. 🔌 🕮 p. 48)
- Remove the air filter. 🔌 (🕮 p. 48)

#### Main work

Wash the air filter thoroughly in special cleaning liquid and allow it to dry properly.

Air filter cleaner (🕮 p. 111)

#### lnfo

- Only press the air filter to dry it, never wring it out.
- Oil the dry air filter with a high quality filter oil.

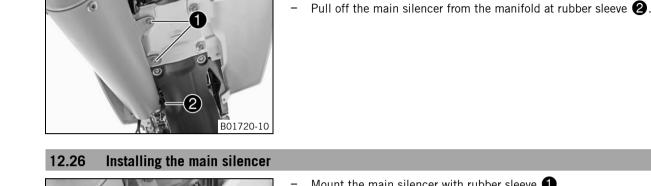

Oil for foam air filter (
p. 111)

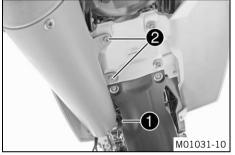

- Clean the air filter housing.
- Check the intake flange for damage and ensure it is firmly seated.

#### **Finishing work**

- 🛛 Install the air filter. 🔌 (🕮 p. 49)
- 🛛 Install the air filter housing. 🔌 (🕮 p. 48)
- Lock the seat. (🕮 p. 47)

Removing the main silencer

- Mount the main silencer with rubber sleeve  $\mathbf{1}$ .
- Mount and tighten screws **2**. Guideline

Remaining screws, chassis	M8	25 Nm
		(18.4 lbf ft)

#### 12.27 Changing glass fiber yarn filling in the main silencer 🔌

#### Warning

Danger of burns The exhaust system gets very hot when the vehicle is driven.

\_

- Allow the exhaust system to cool down before performing any work on the vehicle.

#### Info

Over a period, the fibers of the glass fiber yarn vanish into the air, and the silencer "burns out". Not only is the noise level higher, the performance characteristic changes.

#### **Preparatory work**

Remove the main silencer. (
p. 50)

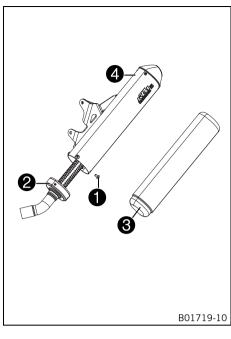

Warning

\_

12.25

- **Danger of burns** The exhaust system gets very hot when the vehicle is driven.
  - Allow the exhaust system to cool down before performing any work on the vehicle.

Remove screws 1.

#### Main work

\_

- Remove screws 1.
- Pull out connecting cap 2.
- Remove old glass fiber yarn filling **3**.
  - Clean the parts that need to be reinstalled and check for damage.
- Fit the new glass fiber yarn filling **3** onto the perforated pipe.
- Slide main silencer sleeve 4 over the connecting cap with the new glass fiber yarn filling.
- Mount and tighten all screws ①.

Guideline

Screws on the main silencer	M5	7 Nm (5.2 lbf ft)
-----------------------------	----	-------------------

#### \_\_\_\_\_ Finishing work

- Install the main silencer. (🕮 p. 50)

#### 12.28 Removing the fuel tank 🔦

#### **Danger**

Fire hazard Fuel is highly flammable.

The fuel in the fuel tank expands when warm and can escape if overfilled.

- Do not refuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

#### Warning

Danger of poisoning Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.
- Keep fuels correctly in a suitable canister, and out of the reach of children.

#### Preparatory work

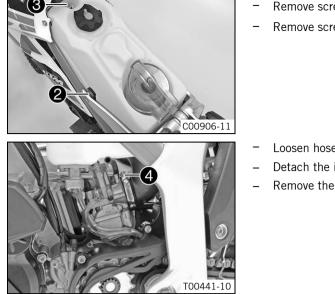

Fold the seat up. (🕮 p. 47)

#### Main work

- Turn handle **①** of the fuel tap to the **OFF** position. (Figure CO0897-10🕮 p. 16)
- Push back hose clamp and pull off the fuel line.

Remaining fuel may flow out of the fuel line.

- Remove the tube from the fuel tank breather.
- Remove screws **2** on both sides.
- Remove screw **3**.

Loosen hose clip 4.

- Detach the intake flange from the carburetor.
- Remove the fuel tank from above.

#### 12.29 Installing the fuel tank 🔌

#### Danger

Fire hazard Fuel is highly flammable.

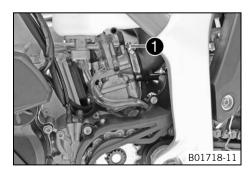

The fuel in the fuel tank expands when warm and can escape if overfilled.

- Do not refuel the vehicle in the vicinity of open flames or lit cigarettes. \_
- \_ Switch off the engine for refueling.
- \_ Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling. \_

#### Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes. \_
- Change your clothing in case of fuel spills on them. \_

#### Main work

- Check the throttle cable routing. (
  p. 57) \_
- Make sure that no cables or throttle cables are trapped or damaged.
- Position the fuel tank.
- Position the intake flange on the carburetor.
- Position and tighten hose clip **1**.
- Mount the fuel line and position the hose clamp.

#### Info

Route the cable and fuel line at a safe distance from the exhaust system.

- Mount and tighten screws **2** on both sides.

#### Guideline

(11.1 lbf ft)	Screw, fuel tank M8 15 Nm Loctite <sup>®</sup> 243™
---------------	---

Mount and tighten screw 3.
 Guideline

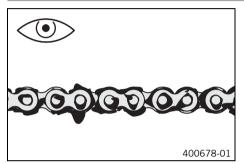

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
---------------------------	----	--------------------

Mount the fuel tank breather hose.

#### **Finishing work**

- Lock the seat. (🗐 p. 47)

#### 12.30 Checking for chain dirt accumulation

- Check the chain for coarse dirt accumulation.
  - » If the chain is very dirty:
    - Clean the chain. (🕮 p. 53)

#### 12.31 Cleaning the chain

#### Warning

Danger of accidents Oil or grease on the tires reduces the road grip.

- Remove the lubricant from the tires using a suitable cleaning agent.

Danger of accidents Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

#### **Warning**

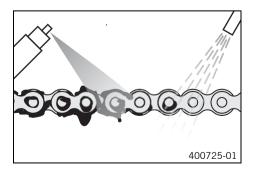

Warning

Environmental hazard Hazardous substances cause environmental damage.

Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

#### **I**nfo

The service life of the chain depends largely on its maintenance.

#### **Preparatory work**

- Raise the motorcycle with the lift stand. (E p. 39)

#### Main work

- Clean the chain regularly and then treat with chain spray.

Chain cleaner (🕮 p. 111)

Off-road chain spray (🕮 p. 111)

#### **Finishing work**

\_

Remove the motorcycle from the lift stand. (
p. 39)

#### 12.32 Checking the chain tension

#### Warning

**Danger of accidents** Incorrect chain tension damages components and results in accidents.

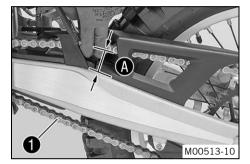

If the chain is tensioned too much, the chain, engine sprocket, rear sprocket, transmission and rear wheel bearings wear more quickly. Some components may break if overloaded.

If the chain is too loose, the chain may fall off the engine sprocket or the rear sprocket. As a result, the rear wheel locks or the engine will be damaged.

- Check the chain tension regularly.
- Set the chain tension in accordance with the specification.

Main work

Pull the chain at the end of the chain sliding component upwards to measure chain tension  $(\mathbf{A})$ .

•	Info

The lower chain section ① must be taut. Chain wear is not always even, so you should repeat this measurement at different chain positions.

Chain tension	36 40 mm (1.42 1.57 in)

- » If the chain tension does not meet specifications:
  - Adjust the chain tension. (🕮 p. 54)

#### Finishing work

- Remove the motorcycle from the lift stand. (
P. 39)

#### 12.33 Adjusting the chain tension

#### Warning

Danger of accidents Incorrect chain tension damages components and results in accidents.

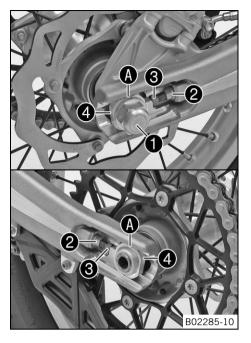

If the chain is tensioned too much, the chain, engine sprocket, rear sprocket, transmission and rear wheel bearings wear more quickly. Some components may break if overloaded.

If the chain is too loose, the chain may fall off the engine sprocket or the rear sprocket. As a result, the rear wheel locks or the engine will be damaged.

- Check the chain tension regularly.
- Set the chain tension in accordance with the specification.

#### Preparatory work

- Raise the motorcycle with the lift stand. (IP p. 39)
- Check the chain tension. (🕮 p. 54)

#### Main work

- Loosen nut 1.
  - Loosen nuts **2**.
- Adjust the chain tension by turning adjusting screws **3** on the left and right. Guideline

# Chain tension 36... 40 mm (1.42... 1.57 in) Turn adjusting screws ③ on the left and right so that the markings on the left and right chain adjusters are in the same position relative to reference

marks (A). The rear wheel is then correctly aligned.

- Tighten nuts 2.
- Make sure that chain adjusters 4 are fitted correctly on adjusting screws 3.
- Tighten nut 🚺.

#### Guideline

Nut, rear wheel spindleM20x1.580 Nm (59 lbf ft)
---

#### Info

The wide adjustment range of the chain adjusters enables different secondary ratios with the same chain length. Chain adjusters 4 can be turned by 180°.

#### **Finishing work**

12.34 Checking the chain, rear sprocket, engine sprocket and chain guide

400227-01

# 

Preparatory work

- Raise the motorcycle with the lift stand. (
p. 39)

#### Main work

- Shift gear to neutral.

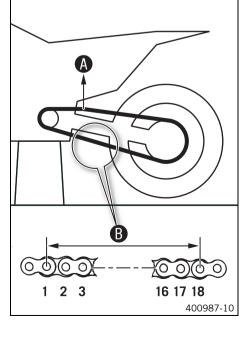

- Check the rear sprocket and engine sprocket for wear.
  - » If the rear sprocket and engine sprocket are worn:
    - Change the drivetrain kit. 🔌

#### Info The

The engine sprocket, rear sprocket and chain should always be replaced together.

- Pull on the upper part of the chain with the specified weight (A).

Guideline

 Weight, chain wear measurement
 10... 15 kg (22... 33 lb.)

 Measure the distance 

 of 18 chain links in the lower chain section.

 Info

 Chain wear is not always even, so you should repeat this measurement at different chain positions.

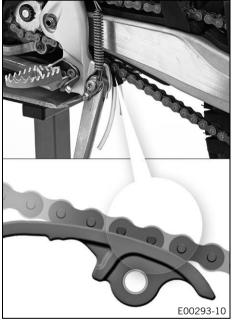

Maximum distance <b>B</b> at the longest chain section	272 mm (10.71 in)
--	-------------------

- » If the distance **B** is greater than the specified measurement:
  - Change the drivetrain kit. 🔧
    - Info

When the chain is replaced, the rear sprocket and engine sprocket should also be changed.

New chains wear out faster on old, worn sprockets.

- Check the chain sliding guard for wear.
  - If the bottom edge of the chain bolt is in line with or below the chain sliding » guard:
    - Change the chain sliding guard. 🔌
- Check that the chain sliding guard is firmly seated.
- If the chain sliding guard is loose: »
  - Tighten the screws on the chain sliding guard. \_

Guideline

Remaining screws, chassis	M6	10 Nm
_		(7.4 lbf ft)

- Check the chain sliding piece for wear.
  - If the bottom edge of the chain bolt is in line with or below the chain sliding » piece:
    - \_ Change the chain sliding piece. 🔌
- Check that the chain sliding piece is firmly seated.
  - If the chain sliding piece is loose: »
    - Tighten the screw on the chain sliding piece. \_ Guideline

Screw, chain sliding piece	M8	15 Nm (11.1 lbf ft)
----------------------------	----	------------------------

Check the chain guide for wear.

400985-01

B01713-01

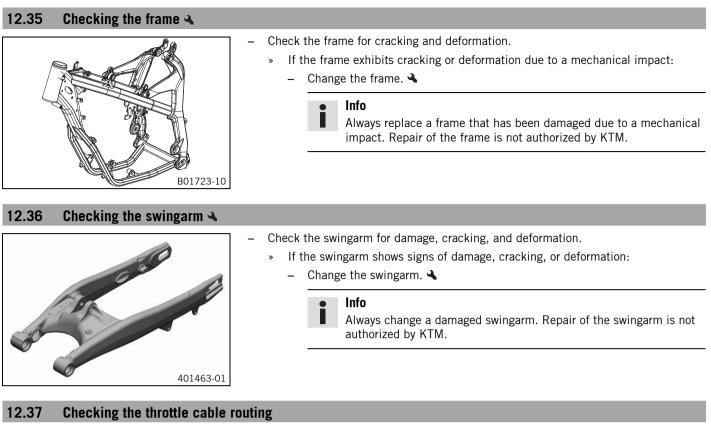

Info

- Wear can be seen on the front of the chain guide.
- If the light part of the chain guide is worn:
  - Change the chain guide. 🔌 \_
- Check that the chain guide is firmly seated.
  - » If the chain guide is loose:
    - Tighten the fitting on the chain guide. Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
Remaining nuts, chassis	M6	10 Nm (7.4 lbf ft)

#### **Finishing work**

Remove the motorcycle from the lift stand. (
p. 39) \_

#### Preparatory work

- Fold the seat up. (🕮 p. 47)
- Remove the fuel tank. 🔧 (🕮 p. 51)

#### Main work

Check the throttle cable routing.

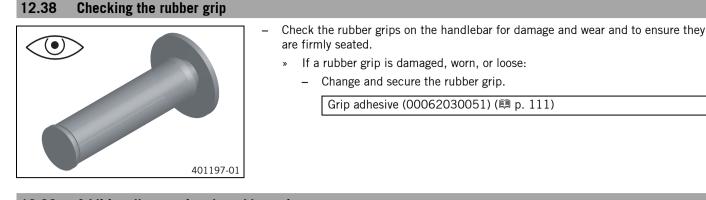

The throttle cable must be routed to the carburetor along the back of the handlebar, below the seat fixing.

- » If the throttle cable is not routed as specified:
  - Correct the throttle cable routing.

#### **Finishing work**

- Install the fuel tank. 🔌 (🕮 p. 52)
- Lock the seat. (🕮 p. 47)

#### 12.39 Additionally securing the rubber grip

#### Preparatory work

Check the rubber grip. (
 P. 58)

#### Main work

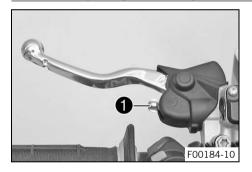

- Secure the rubber grip at two points using the securing wire.

Se
W
 ~

- Securing wire (54812016000) Wire twister forceps (U6907854)
- The twisted wire ends face away from the hands and are bent toward the rubber grip.

#### 12.40 Adjusting the basic position of the clutch lever

401198-01

_	Adjust the basic position of the clutch lever to your hand size by turning adjusting	
	screw 1.	

Info When the adjusting screw is turned clockwise, the clutch lever moves away from the handlebar. When the adjusting screw is turned counterclockwise, the clutch lever moves closer to the handlebar. The range of adjustment is limited. Turn the adjusting screw by hand only, and do not apply force. Do not make any adjustments while riding!

#### 12.41 Checking fluid level of the hydraulic clutch

#### • Info

The fluid level rises with increasing wear of the clutch facing discs.

- Move the clutch fluid reservoir mounted on the handlebar into a horizontal position.
- Check the fluid level in viewer 🚺.
  - » If the fluid has dropped below marking (A) in the level viewer:
    - Correct the fluid level of the hydraulic clutch. (IP p. 59)

#### 12.42 Correcting the fluid level of the hydraulic clutch

#### Warning

Skin irritation Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

#### g Warning

Environmental hazard Hazardous substances cause environmental damage.

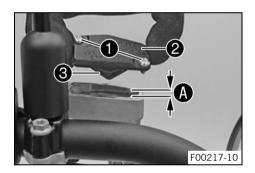

Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

#### Info

The fluid level rises with increasing wear of the clutch facing discs.

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and clutch lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint. Only use clean brake fluid from a sealed container.

- Move the clutch fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws ①.
- Remove cover **2** with membrane **3**.
- Correct the fluid up to level **A**.

#### Guideline

Level \Lambda (fluid level below container rim)	4 mm (0.16 in)
Brake fluid DOT 4 / DOT 5.1 (🕮 p. 109)	

Position the cover with the membrane. Mount and tighten the screws.

lnfo

Clean up overflowed or spilled brake fluid immediately with water.

#### 12.43 Changing the hydraulic clutch fluid 🔌

#### Warning

Skin irritation Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

#### Warning

Environmental hazard Hazardous substances cause environmental damage.

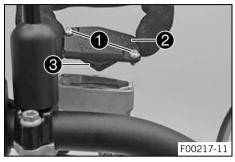

- Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

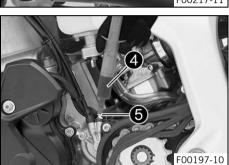

#### 60

#### Info

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and clutch lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint. Only use clean brake fluid from a sealed container.

- Move the clutch fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws 1.
- Remove cover **2** with membrane **3**.

Fill bleeding syringe 4 with the appropriate hydraulic fluid.

Bleed syringe (50329050000)	
Brake fluid DOT 4 / DOT 5.1 (🕮 p. 109)	

- On the clutch slave cylinder, remove bleeder screw **5** and mount bleeding syringe **4**.
- Inject the liquid into the system until it escapes from opening (A) of the master cylinder without bubbles.
- Now and then, extract fluid from the master cylinder reservoir to prevent overflow.
- Remove the bleeding syringe. Mount and tighten screws bleeder screw.
- Correct the fluid level of the hydraulic clutch.

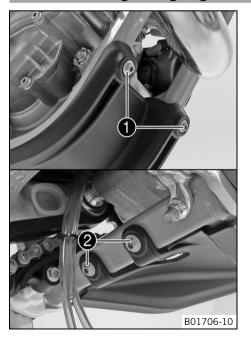

Fluid level below container rim	4 mm (0.16 in)

Position the cover with the membrane. Mount and tighten the screws.

#### Info

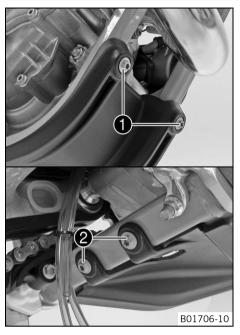

Clean up overflowed or spilled brake fluid immediately with water.

#### 12.44 Removing the engine guard

- Remove screws **1** and **2**.
- Lower the engine guard at the rear and remove it toward the front.

## 12.45 Installing the engine guard

-	Position the engine guard on the frame at the front and mount screws 1 but do not tighten yet.
_	Position the engine guard on the frame at the rear and mount and tighten

Position the engine guard on the frame at the rear and mount and tighten screws  $\mathbf{Q}$ .

#### Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
Tighten screws <b>1</b> .		
Guideline		
Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)

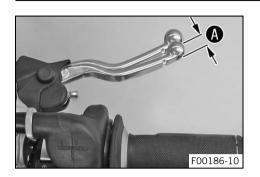

#### 13.1 Checking the free travel of the hand brake lever

#### Warning

**Danger of accidents** The brake system fails in the event of overheating.

If there is no free travel on the hand brake lever, pressure builds up on the front brake circuit.

Set the free travel on the hand brake lever in accordance with the specification.

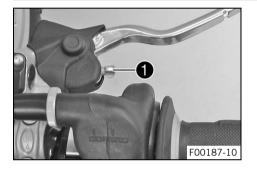

Push the hand brake to the handlebar and check free travel  $oldsymbol{A}$  .

Free travel of hand brake lever ≥	≥ 3 mm (≥ 0.12 in)
-----------------------------------	--------------------

» If the free travel does not meet specifications:

– Adjust the free travel of the handbrake lever. (
p. 62)

13.2 Adjusting the free travel of the handbrake lever

- Check the free travel of the hand brake lever. (🕮 p. 62)
- Adjust the free travel of the handbrake lever with adjustment screw lacksquare .

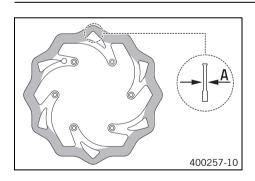

Turn the adjusting screw clockwise to reduce free travel. The pressure point moves away from the handlebar.
 Turn the adjusting screw counterclockwise to increase free travel. The pressure point moves towards the handlebar.
 The range of adjustment is limited.
 Only turn the adjusting screw by hand, and do not use force.
 Do not make any adjustments while riding.

#### 13.3 Checking the brake discs

### Warning

Danger of accidents Worn-out brake discs reduce the braking effect.

Make sure that worn-out brake discs are replaced immediately. (Your authorized KTM workshop will be glad to help.)

Check the thickness of the front and rear brake discs at several places on the disk to see if it conforms to measurement (A).

#### Info

Wear reduces the thickness of the brake disc around the area used by the brake linings.

Brake discs - wear limit	
Front	3.7 mm (0.146 in)
Rear	3.5 mm (0.138 in)

- » If the brake disc thickness is less than the specified value:
  - Change the brake disc.
- Check the front and rear brake discs for damage, cracking and deformation.
  - » If the brake disc shows signs of damage, cracking, or deformation:
    - Change the brake disc.

#### 4.4 Checking the brake fluid level of the front brake

#### Warning

**Danger of accidents** An insufficient brake fluid level will cause the brake system to fail.

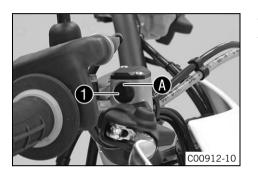

If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

#### Warning Danger of

Danger of accidents Old brake fluid reduces the braking effect.

Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Check the brake fluid level in the viewer **1**.
  - » If the brake fluid has dropped below marking  $oldsymbol{A}$ :
    - Add front brake fluid. 🔦 (🕮 p. 63)

#### 13.5 Adding front brake fluid 🔌

## Warning

**Danger of accidents** An insufficient brake fluid level will cause the brake system to fail. If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

#### Warning

Skin irritation Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

#### Warning

Danger of accidents Old brake fluid reduces the braking effect.

Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

#### Warning

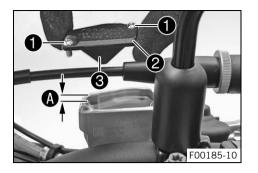

Environmental hazard Hazardous substances cause environmental damage.

Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

#### • Info

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint. Only use clean brake fluid from a sealed container.

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws **1**.
- Remove cover **2** with membrane **3**.
- Add brake fluid to level (A). Guideline

Level (brake fluid level below reservoir rim)	5 mm (0.2 in)
Brake fluid DOT 4 / DOT 5.1 (🕮 p. 109)	

Position the cover with the membrane. Mount and tighten the screws.

Info

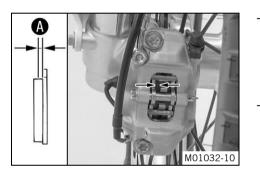

Clean up overflowed or spilled brake fluid immediately with water.

#### 13.6 Checking the front brake linings

Warning

Danger of accidents Worn-out brake linings reduce the braking effect.

Ensure that worn-out brake linings are replaced immediately. (Your authorized KTM workshop will be glad to help.)

#### Check the brake linings for minimum thickness (A).

	Minimum thickness	≥ 1 mm (≥ 0.04 in)
» If the minimum thickness is less than specified:		
	– Change the front brake linings. 🔧 (🕮 p. 64)	
	Check the brake linings for damage and cr	acking.

- If damage or cracking is visible:
  - Change the front brake linings. 🔌 (🕮 p. 64)

#### 13.7 Changing the front brake linings 🔌

#### Warning

Danger of accidents Incorrect maintenance will cause the brake system to fail.

Ensure that service work and repairs are performed professionally. (Your authorized KTM workshop will be glad to help.)

## Warning

Skin irritation Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- \_ Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing. \_

#### Warning

**Danger of accidents** Old brake fluid reduces the braking effect.

Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

## Warning

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

## Warning

**Danger of accidents** Brake linings which have not been approved alter the braking efficiency.

Not all brake linings are tested and approved for KTM motorcycles. The structure and friction coefficient of the brake linings, and thus their brake power, may vary greatly from that of original brake linings.

If brake linings are used that differ from the original equipment, compliance with the original homologation is not guaranteed. In this case, the vehicle no longer corresponds to its condition at delivery and the warranty shall be void.

- Only use brake linings approved and recommended by KTM.

#### Warning Environm

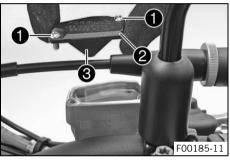

Environmental hazard Hazardous substances cause environmental damage.

Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

## Info

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint. Only use clean brake fluid from a sealed container.

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws 1
- Remove cover **2** with membrane **3**.
- 4 F00199-10

(5)

B01698-10

- Remove screws **4** and spacers.
- Press back the brake linings with a light lateral tilting of the brake caliper on the brake disc. Carefully pull the brake caliper backward from the brake disc.
- Press the brake piston back into the basic position and ensure that brake fluid does not flow out of the brake fluid reservoir, sucking it away if necessary.
- Remove cotter pin **5**.
- Remove pin **6**.
- Clean the brake caliper.
- Position the new brake linings.

#### lnfo

Always change the brake linings in pairs.

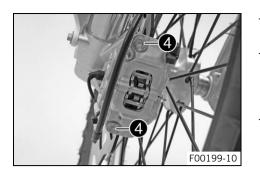

- Position retaining spring 🕜.
- Mount pin 🙆.

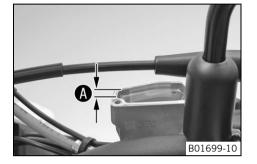

Info

To make it easier to mount the pin, push the retainer spring down. Make sure the retaining spring is seated correctly.

- Mount cotter pins 6.

- Position the brake caliper. Mount screws 4 with the spacers but do not tighten yet.
- Operate the hand brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point. Fix the hand brake lever in the activated position.

✓ The brake caliper straightens.

#### Tighten screws 🖪.

Guideline

243™

- Remove the locking piece of the hand brake lever.

#### Add brake fluid to level 🚯.

Guideline	
Level (A) (brake fluid level below reservoir rim)	5 mm (0.2 in)
Brake fluid DOT 4 / DOT 5.1 (寫 p. 109)	

Position the cover with the membrane. Mount and tighten the screws.

#### Info

Clean up overflowed or spilled brake fluid immediately with water.

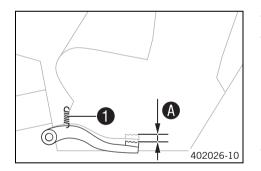

#### 13.8 Checking the free travel of foot brake lever

#### Warning

**Danger of accidents** The brake system fails in the event of overheating.

If there is no free travel on the foot brake lever, pressure builds up in the brake system on the rear brake.

- Set the free travel on the foot brake lever in accordance with the specification.

#### Disconnect spring 1.

 Move the foot brake lever back and forth between the end stop and the contact to the foot brake cylinder piston and check free travel .

 Guideline

 Free travel at foot brake lever
 3... 5 mm (0.12... 0.2 in)

 »
 If the free travel does not meet specifications:

 –
 Adjust the basic position of the foot brake lever. ▲ (興 p. 66)

 Reconnect spring ①.

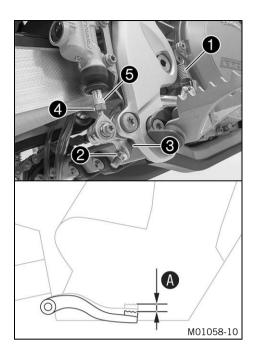

#### 13.9 Adjusting the basic position of the foot brake lever 🔌

Warning

**Danger of accidents** The brake system fails in the event of overheating.

If there is no free travel on the foot brake lever, pressure builds up in the brake system on the rear brake.

- Set the free travel on the foot brake lever in accordance with the specification.

- Disconnect spring 1.
- Loosen nut ④ and, with push rod ⑤, turn it back until you have maximum free travel.
- To adjust the basic position of the foot brake lever individually, loosen nut (2) and turn screw (3) accordingly.

|--|

- Turn push rod (5) accordingly until you have free travel (A). If necessary, adjust the basic position of the foot brake lever.

Guideline

Free travel at foot brake lever3 5 mm (0.12 0.2 in)
---

Hold screw 3 and tighten nut 2.

## Guideline

- Nut, foot brake lever stop
   M8
   20 Nm (14.8 lbf ft)
- Hold push rod 🕤 and tighten nut 4. Guideline Remaining nuts, chassis M6
- Reconnect spring 🕦.

#### 13.10 Checking the rear brake fluid level

#### Warning

Danger of accidents An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

#### Warning

Danger of accidents Old brake fluid reduces the braking effect.

Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

- Stand the vehicle upright.
- Check the brake fluid level in the viewer  $oldsymbol{1}$  .
  - » If the brake fluid level drops below marking  $oldsymbol{A}$ :
    - Add rear brake fluid. ◀ ( p. 67)

#### 13.11 Adding rear brake fluid 🔧

#### Warning

Danger of accidents An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

10 Nm (7.4 lbf ft)

#### Warning

Skin irritation Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

#### Warning

Danger of accidents Old brake fluid reduces the braking effect.

Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

#### Warning

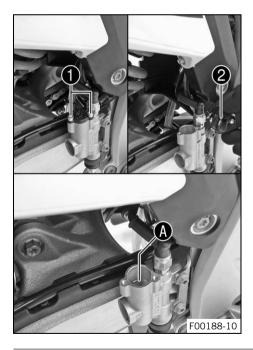

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

#### e Info

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint. Only use clean brake fluid from a sealed container.

#### Preparatory work

- Check the rear brake linings. (🕮 p. 68)

#### Main work

- Stand the vehicle upright.
- Remove screws 1.
- Remove cover with membrane 2.
- Add brake fluid to level (A).

Brake fluid DOT 4 / DOT 5.1 (🕮 p. 109)

- Position the cover with the membrane.
- Mount and tighten the screws.

#### Info

Clean up overflowed or spilled brake fluid immediately with water.

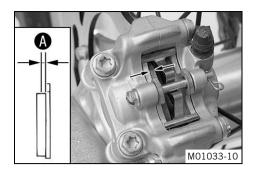

#### 13.12 Checking the rear brake linings

## Warning

Danger of accidents Worn-out brake linings reduce the braking effect.

- Ensure that worn-out brake linings are replaced immediately. (Your authorized KTM workshop will be glad to help.)

- Check the brake linings for minimum thickness (A).

	Minimum thickness A	≥ 1 mm (≥ 0.04 in)
If the maintain we think and in the state of		

- » If the minimum thickness is less than specified:
- Change the rear brake linings. 🔧 (🕮 p. 69)
- Check the brake linings for damage and cracking.
- » If damage or cracking is visible:
  - Change the rear brake linings. 🔌 (🕮 p. 69)

#### 13.13 Changing the rear brake linings 🔦

#### Warning

Danger of accidents Incorrect maintenance will cause the brake system to fail.

- Ensure that service work and repairs are performed professionally. (Your authorized KTM workshop will be glad to help.)

Warning

Skin irritation Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

#### Warning

Danger of accidents Old brake fluid reduces the braking effect.

Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

#### Wai

Warning

Danger of accidents Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

#### Warning

**Danger of accidents** Brake linings which have not been approved alter the braking efficiency.

Not all brake linings are tested and approved for KTM motorcycles. The structure and friction coefficient of the brake linings, and thus their brake power, may vary greatly from that of original brake linings.

If brake linings are used that differ from the original equipment, compliance with the original homologation is not guaranteed. In this case, the vehicle no longer corresponds to its condition at delivery and the warranty shall be void.

- Only use brake linings approved and recommended by KTM.

#### Warning Environme

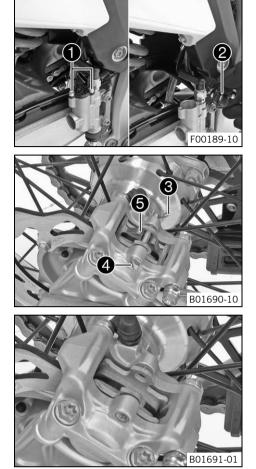

Environmental hazard Hazardous substances cause environmental damage.

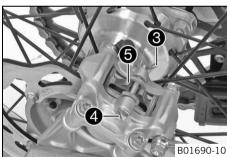

Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

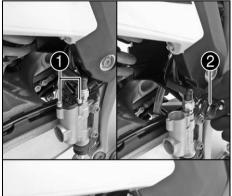

#### Info

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint. Only use clean brake fluid from a sealed container.

- Stand the vehicle upright.
- Remove screws 1.
- Remove cover with membrane **2**.
- Press the brake piston back into the basic position and ensure that brake fluid does not flow out of the brake fluid reservoir, sucking it away if necessary.
- Remove cotter pin **3**.
- Remove pin **4**.
- Take off retaining spring **5** and remove the brake linings.
- Clean the brake caliper.
- Position the new brake linings.

Info Always change the brake linings in pairs.

- Position retaining spring **5**.
- Mount pin **4**.

To make it easier to mount the pin, push the retainer spring down. Make sure the retaining spring is seated correctly.

- Mount cotter pins **3**.
- Operate the foot brake lever repeatedly until the brake linings are in contact with \_ the brake disc and there is a pressure point.
- Add brake fluid to level (A). \_

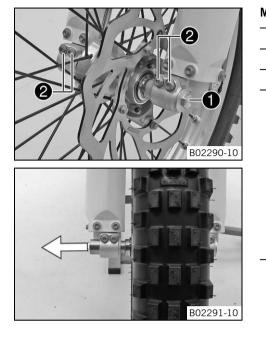

Brake fluid DOT 4 / DOT 5.1 (🕮 p. 109)

- Position the cover with the membrane  $\mathbf{2}$ .
- Mount and tighten screws 1.

Clean up overflowed or spilled brake fluid immediately with water.

# 14.1 Removing the front wheel 🔌

#### Preparatory work

- Raise the motorcycle with the lift stand. (IP p. 39)

### Main work

- Loosen screw 1 by several rotations.
  - Loosen screws 2.
  - Press on screw 1 to push the wheel spindle out of the axle clamp.
- Remove screw 1.

**Danger of accidents** Damaged brake discs reduce the braking effect.

- Always lay the wheel down in such a way that the brake disc is not damaged.
- Holding the front wheel, withdraw the wheel spindle. Take the front wheel out of the fork.

Do not pull the hand brake lever when the front wheel is removed.

- Remove spacers **3**.

# 14.2 Installing the front wheel 🔌

### Warning

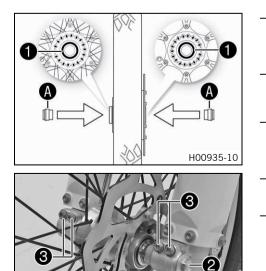

з

Danger of accidents Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

B02290-11

H00934-10

- Check the wheel bearing for damage and wear.
  - If the wheel bearing is damaged or worn: - Change the front wheel bearing.
- Clean and grease shaft seal rings **①** and contact surface **④** of the spacers.

Long-life grease (🕮 p. 111)

Insert the spacers.

- Position the front wheel and insert the wheel spindle.
- The brake linings are correctly positioned.
- Mount and tighten screw 2.
  - Guideline

Screw, front wheel spindle	M20x1.5	35 Nm
		(25.8 lbf ft)

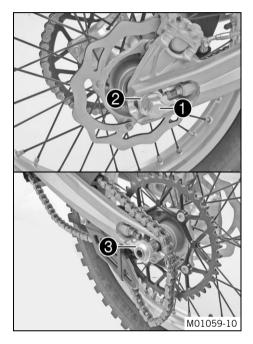

71

- Operate the hand brake lever several times until the brake linings are seated correctly against the brake disc.
- Remove the motorcycle from the lift stand. (
  P. 39)
- Operate the front brake and compress the fork a few times firmly.
- ✓ The fork legs straighten.
- Tighten screw 3.

### Guideline

Screw, fork stub	M8	15 Nm (11.1 lbf ft)

# 14.3 Removing the rear wheel 🔌

### Preparatory work

- Raise the motorcycle with the lift stand. (I p. 39)

#### Main work

- Remove nut 1.
- Remove chain adjuster 2.
- Withdraw wheel spindle (3) only enough to allow the rear wheel to be pushed forward.
- Push the rear wheel forward as far as possible. Remove the chain from the rear sprocket.

# • Info

Cover the components to protect them against damage.

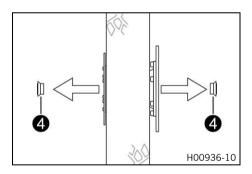

# Marning

Danger of accidents Damaged brake discs reduce the braking effect.

- Always lay the wheel down in such a way that the brake disc is not damaged.
- Holding the rear wheel, withdraw the wheel spindle. Take the rear wheel out of the swingarm.

Do not operate the foot brake lever when the rear wheel is removed.

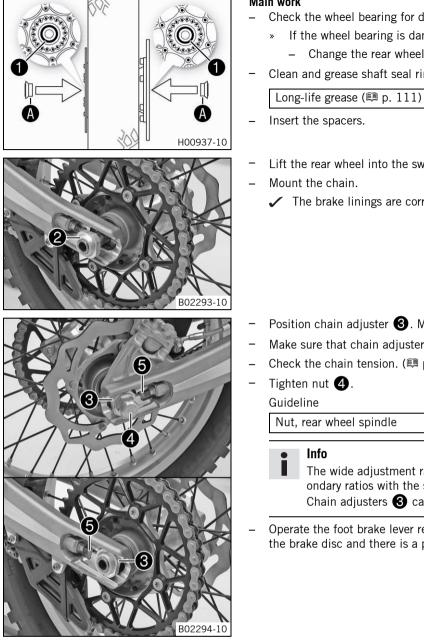

# Remove spacers 4.

# 14.4 Installing the rear wheel A

# Warning

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

# Main work

- Check the wheel bearing for damage and wear.
  - If the wheel bearing is damaged or worn: Change the rear wheel bearing.
- Clean and grease shaft seal rings 1 and contact surface A of the spacers.
- Insert the spacers.
- Lift the rear wheel into the swingarm, position it, and insert wheel spindle **2**.
- Mount the chain.
  - The brake linings are correctly positioned.
- Position chain adjuster **3**. Mount nut **4**, but do not tighten it yet.
- Make sure that chain adjusters **3** are fitted correctly on adjusting screws **5**.
- Check the chain tension. (I p. 54)
- Tighten nut **4**.
- Guideline

Nut, rear wheel spindle	M20x1.5	80 Nm (59 lbf ft)
-------------------------	---------	-------------------

#### Info

The wide adjustment range of the chain adjusters enables different secondary ratios with the same chain length. Chain adjusters **3** can be turned by 180°.

Operate the foot brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point.

#### **Finishing work**

Remove the motorcycle from the lift stand. (
p. 39)

#### 14.5 Checking the tire condition

# Info

Only mount tires approved and/or recommended by KTM.

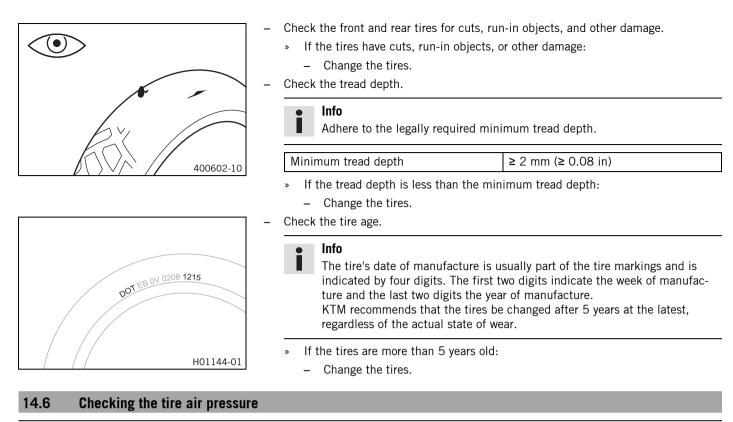

Other tires could have a negative effect on handling characteristics.

The type, condition, and air pressure of the tires all have a major impact on the handling of the motorcycle.

The tires mounted on the front and rear wheels must have a similar profile.

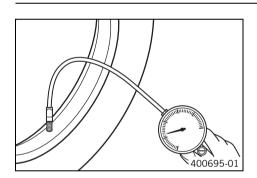

Worn tires have a negative effect on handling characteristics, especially on wet surfaces.

If used regularly on public roads, tires wear much faster and the minimum tread depth and general condition of the tires must be checked more frequently.

# lnfo

Low tire air pressure leads to abnormal wear and overheating of the tire. Correct tire air pressure ensures optimal riding comfort and maximum tire service life.

- Remove the protection cap.
- Check the tire air pressure when the tires are cold.

Tire air pressure, offroad	
Front	0.9 bar (13 psi)
Rear	0.7 bar (10 psi)
Tire air pressure, road (EU)	
Front	1.5 bar (22 psi)
Rear	1.5 bar (22 psi)

If the tire pressure does not meet specifications:

- Correct the tire pressure.
- Mount protection cap.

# 14.7 Checking the spoke tension

# Warning

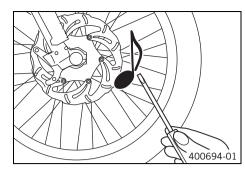

**Danger of accidents** Incorrectly tensioned spokes impair the handling characteristic and result in secondary damage.

The spokes break due to being overloaded if they are too tightly tensioned. If the tension in the spokes is too low, then lateral and radial run-out will form in the wheel. Other spokes will become looser as a result.

- Check spoke tension regularly, and in particular on a new vehicle. (Your authorized KTM workshop will be glad to help.)

# Info

A loose spoke causes wheel imbalance and rapidly leads to more loose spokes. If the spokes are too tight, they can break due to local overload. Check the spoke tension regularly, especially on a new motorcycle.

- Briefly strike each spoke with the tip of a screwdriver.

### • Info The

The tone frequency depends on the length of the spoke and the spoke diameter.

If you hear different tone frequencies from different spokes of equal length and diameter, this is an indication of different spoke tensions.

# You should hear a high note.

- » If the spoke tension varies:
  - Correct the spoke tension. 🔌
- Check the spoke torque.

Guideline

\_

Spoke nipple	M4.5	5 Nm (3.7 lbf ft)
Torque wrench with various accessories in set (58429094000)		

# 15.1 Removing the battery 🔌

# Warning

Risk of injury Batteries contain harmful substances.

- Keep batteries out of the reach of children.
- Keep sparks and open flames away from the batteries.
- Only charge batteries in well-ventilated rooms.
- Maintain a minimum clearance from inflammable materials when charging batteries.
   Minimum clearance 1 m (3 ft)
- Do not charge deeply discharged batteries if charge is already below the minimum voltage.
   Minimum voltage before the start of the charge
   9 V
- Dispose of batteries with less than the minimum voltage correctly.

B02296-10

#### Preparatory work

- Raise the motorcycle with the lift stand. (
  p. 39)
- Fold the seat up. (🕮 p. 47)
- Remove the shock absorber. 

   (Image: Participation of the shock absorber)
   (Image: Participation of the shock absorber)
   (Image: Participation of the shock absorber)

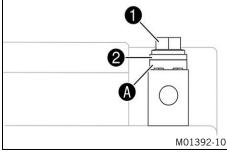

#### Main work

Main work

- Remove screw 1.
- Take off fastening plate **2**.
- Remove the battery out of the battery compartment.
- Disconnect negative cable 3 from the battery.
- Disconnect positive cable 4 from the battery.

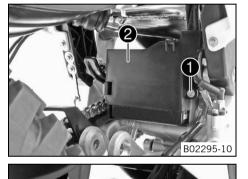

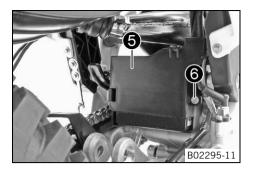

Position positive cable 3 and mount and Guideline	I tighten the screw.	
Screw, battery terminal	M5	2.5 Nm (1.84 lbf ft)

Screw, battery terminal	M5	2.5 Nm (1.84 lbf ft)
Battery (HJTZ5S-FP) (🕮 p. 104)		L

Contact disks (A) must be mounted under screws (1) and cable sockets (2) with the claws toward the battery terminal.

76

Position the battery in the battery compartment.

Ensure that the battery cable is correctly routed.

• Attach fastening plate **5**.

Info

Mount and tighten screw 6.

### **Finishing work**

- Install the shock absorber. 🔧 (🕮 p. 46)
- Remove the motorcycle from the lift stand. (
  P. 39)

# 15.3 Recharging the battery 🔧

### Warning

Risk of injury Batteries contain harmful substances.

- Keep batteries out of the reach of children.
- Keep sparks and open flames away from the batteries.
- Only charge batteries in well-ventilated rooms.
- Maintain a minimum clearance from inflammable materials when charging batteries.
   Minimum clearance 1 m (3 ft)
- Do not charge deeply discharged batteries if charge is already below the minimum voltage.
   Minimum voltage before the start of the charge
   9 V
- Dispose of batteries with less than the minimum voltage correctly.

### Warning

Warning

Environmental hazard The battery contains elements that are harmful to the environment.

Do not dispose of batteries with the household waste. Dispose of a defective battery in an environmentally friendly manner.
 Give the battery to your authorized KTM dealer or dispose of it at a collection point for used batteries.

Environmental hazard Hazardous substances cause environmental damage.

Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

# • Info

Even when there is no load on the battery, it discharges steadily. The charge state and the type of charge are very important for the service life of the battery. Rapid recharging with a high charging current shortens the battery's service life. If the charging current, charging voltage and charging time are exceeded, the battery will be destroyed. If the battery is depleted from starting the vehicle repeatedly, the battery must be charged immediately. If the battery is left in a discharged state for an extended period, it will become over-discharged and will be destroyed. The battery is maintenance-free.

### Preparatory work

- Fold the seat up. (🕮 p. 47)
- Remove the shock absorber. 🔧 (🕮 p. 46)

# Main work

- Connect the battery charger with the battery. Switch on the battery charger.

Battery charger (58429074000)

You can also use the battery charger to test the rest potential and starting ability of the battery, and to test the alternator. With this device, you cannot overcharge the battery.

# Info

Only charge the battery with the specified battery charge. Read the notes in the battery package.

 Switch off the battery charger after charging and disconnect from the battery. Guideline

The charging current, charging voltage, and charging time must not be exceeded.	
Charge the battery regularly when the motorcycle is not in use	3 months

#### **Finishing work**

- Install the battery. ◀ ( p. 76)
- Install the shock absorber. 🔧 (🕮 p. 46)

# 15.4 Changing the main fuse

### Warning

Fire hazard Incorrect fuses overload the electrical system.

B01684-10

B01685-10

- Only use fuses with the required ampere value.
- Do not bypass or repair fuses.

## • Info

The main fuse protects all power consumers of the vehicle. It is located in the starter relay housing under the seat.

#### Preparatory work

- Press and hold the kill switch  $\otimes$  while the engine is idling until the engine stops.
- Fold the seat up. (🕮 p. 47)

#### Main work

Remove protection cap 🚺.

#### Remove faulty main fuse **2**.

You can recognize a defective fuse by a burned-out fuse wire (A). A spare fuse (3) is located in the starter relay.

Install a new main fuse.

Fuse (58011109110) (🕮 p. 104)

Check that the electrical equipment is functioning properly.

Insert a spare fuse so that it is available if needed.

- Mount the protection cap.

#### **Finishing work**

- Lock the seat. (🕮 p. 47)

# 15.5 Changing the fuses of individual power consumers

# •

Info

The fuse box containing the fuses of individual power consumers is located under the seat.

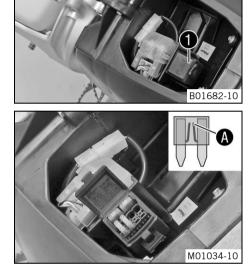

#### **Preparatory work**

- Press and hold the kill switch  $\otimes$  while the engine is idling until the engine stops.
- Fold the seat up. (🕮 p. 47)

#### Main work

\_

Open fuse box cover **1**.

# - Remove the defective fuse.

Guideline

(EU)

Fuse 1 - 10 A - horn, brake light, turn signal, speedometer

### (US)

Fuse 1 - 10 A - horn, brake light, speedometer

Fuse 2 - 10 A - radiator fan

Fuses res - 10 A - spare fuses

# • Info

You can recognize a defective fuse by a burned-out fuse wire  $\mathbf{A}$ .

# Warning

Fire hazard Incorrect fuses overload the electrical system.

- Only use fuses with the required ampere value.
- Do not bypass or repair fuses.
- Use spare fuses with the correct rating only.

Fuse (75011088010) (🕮 p. 104)

### Tip

Replace the spare fuse in the fuse box so that it is available if needed.

- Check that the power consumer is functioning properly.
- Close the fuse box cover.

#### **Finishing work**

– Lock the seat. (🕮 p. 47)

# 15.6 Removing the headlight mask with the headlight

### Preparatory work

– Press and hold the kill switch  $\otimes$  while the engine is idling until the engine stops. Main work

## (EU)

- Detach the brake line and wiring harness 1.
- Release rubber straps **2**. Slide the headlight mask up and swing it forward.

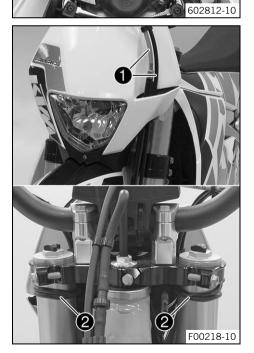

- Disconnect plug-in connectors (3) for the turn signals and (4) for the head-light.

### (US)

F00219-10

4

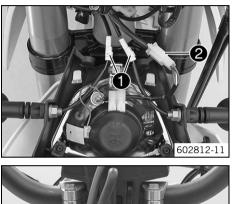

- Detach the brake line and wiring harness 1
  - Release rubber straps **2**. Slide the headlight mask up and swing it forward.

2

15.7 Installing the headlight mask with the headlight

# Main work

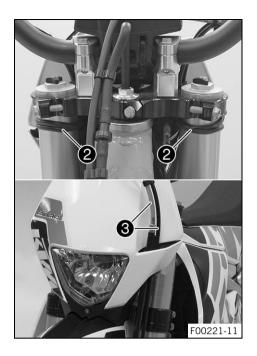

(EU)

- Connect plug-in connectors **()** for the turn signals and **(2)** for the headlight.

- Position the headlight mask and secure it with rubber bands 3.
   The holding lugs on the fender engage in the headlight mask.
   Attach the brake line and wiring harness 4.

- (US) Connect plug-in connector 1 of the headlight.

Disconnect plug-in connector **3** of the headlight.

- Position the headlight mask and secure it with rubber bands **2**.
- The holding lugs on the fender engage in the headlight mask.
- Attach the brake line and wiring harness (3).

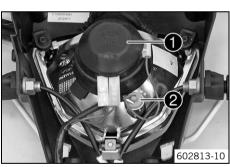

Finishing work - Check the headlight setting. (興 p. 83)

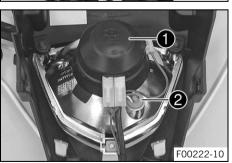

# 15.8 Changing the headlight bulb

## Note

Damage to reflector Reduced brightness.

 Grease on the lamp will evaporate due to the heat and be deposited on the reflector. Clean the lamp and keep it free of grease before mounting.

### Preparatory work

- Press and hold the kill switch  $\otimes$  while the engine is idling until the engine stops.
- Remove the headlight mask with the headlight. (🕮 p. 80)

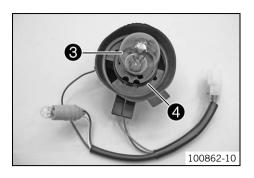

#### Main work (EU)

- Turn rubber cap 
   with the bulb socket beneath it all the way counterclockwise and lift it off.
- Pull bulb socket **2** of the parking light out of the reflector.

### (US)

—

- Turn rubber cap 
   with the bulb socket beneath it all the way counterclockwise and lift it off.
  - Pull bulb socket 2 of the parking light out of the reflector.

• Push headlight bulb ③ lightly into the bulb socket, turn it all the way counterclockwise, and pull it out.

- Insert the new headlight bulb.

Headlight (S2/socket BA20d) (🕮 p. 104)

 Insert the rubber cap with the bulb socket into the reflector and turn it all the way clockwise.

Ensure that O-ring 4 is seated properly.

Insert the bulb socket of the parking light into the reflector.

#### **Finishing work**

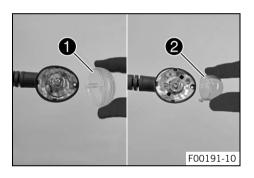

- Install the headlight mask with the headlight. (
  P. 81)
- Check the headlight setting. (🕮 p. 83)

# 15.9 Changing the turn signal bulb (EU)

#### Note

### Damage to reflector Reduced brightness.

 Grease on the lamp will evaporate due to the heat and be deposited on the reflector. Clean the lamp and keep it free of grease before mounting.

#### Main work

- Remove the screw on the rear of the turn signal housing.
- Carefully remove diffuser ①.
- Lightly squeeze together the orange cap ② in the area of the holding lugs and take it off.
- Press the turn signal bulb carefully into the socket, turn it counterclockwise by about 30°, and take it out of the socket.

### lnfo

Do not touch the reflector with your fingers, and keep it free from grease.

 Press the new turn signal bulb carefully into the socket and turn it clockwise until it stops.

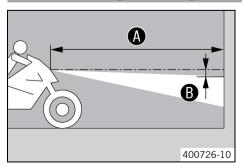

Turn signal (R10W/socket BA15s) (
p. 104)

- Mount the orange cap.
- Position the diffuser.
- Insert the screw and first turn it counterclockwise until it engages in the thread. Tighten the screw slightly.

#### Finishing work

- Check that the turn signal system is functioning properly.

# 15.10 Checking the headlight setting

- Position the vehicle upright on a horizontal surface in front of a light wall and make a mark at the height of the center of the low beam headlight.

Make another mark at a distance B under the first mark.

Guideline Distance

Distance 🚯	5 cm (2 in)
	•

Position the vehicle vertically at a distance  $oldsymbol{A}$  away from the wall.

Guideline

Distance A	5 m (16 ft)

- The rider now sits down on the motorcycle.
- Switch on the low beam.
- Check the headlight setting.

The boundary between light and dark must be exactly on the lower mark for a motorcycle with driver.

- » If the boundary between light and dark does not meet specifications:
  - Adjust the headlight range. (
    p. 84)

# 15.11 Adjusting the headlight range

#### Preparatory work

Main work (EU)

#### Guideline

The boundary between light and dark must be exactly on the lower marking for a motorcycle with rider (instructions on how to apply the marking: Checking the headlight setting).

#### Info

Turn clockwise to increase the headlight range; turn counterclockwise to reduce the headlight range.

A change in weight on the vehicle may require a correction of the head-light range.

### (US)

Adjust the beam distance of the headlight by turning screw ①. Guideline

The boundary between light and dark must be exactly on the lower marking for a motorcycle with rider (instructions on how to apply the marking: Checking the headlight setting).

# Info

Turn clockwise to increase the headlight range; turn counterclockwise to reduce the headlight range.

A change in weight on the vehicle may require a correction of the head-light range.

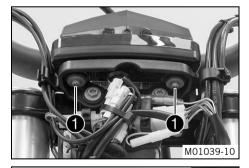

### 15.12 Changing the speedometer battery

# Preparatory work

- Press and hold the kill switch  $\otimes$  while the engine is idling until the engine stops.

## Main work

- Remove screws 1.
- Pull the speedometer upward out of the holder.

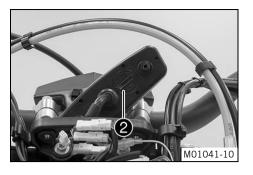

- Using a coin, turn protection cap 2 all the way counterclockwise and remove it.
- Remove speedometer battery 3.
- Insert the new battery with the label facing outward.

Speedometer battery (CR 2032) (🕮 p. 104)

Check the O-ring of the protection cap for correct seating.

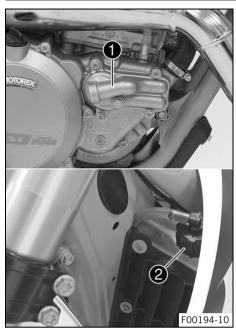

- Position protection cap **2** and turn all the way clockwise using a coin.
- Press any button on the speedometer.
  - ✓ The speedometer is activated.
- Position the speedometer in the holder.
- Mount and tighten the screws with washers.

### **Finishing work**

- Install the headlight mask with the headlight. (IP p. 81)
- Check the headlight setting. (🕮 p. 83)
- Set the speedometer. (🕮 p. 19)

# 16 COOLING SYSTEM

# 16.1 Cooling system

### Water pump 1 in the engine circulates the coolant.

The pressure resulting from the warming of the cooling system is regulated by a valve in radiator cap **2**. This ensures that operating the vehicle at the specified coolant temperature will not result in a risk of malfunctions.

120 °C (248 °F)

Cooling is effected by the air stream.

The lower the speed, the less the cooling effect. Dirty cooling fins also reduce the cooling effect.

The radiator fan provides extra cooling. It is controlled by a thermoswitch.

# 16.2 Checking the antifreeze and coolant level

#### Warning

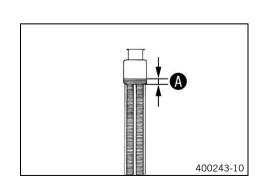

**Danger of scalding** During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at
  operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses or other components
  of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

# Warning

Danger of poisoning Coolant is toxic and a health hazard.

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

#### Condition

The engine is cold.

- Stand the motorcycle upright on a horizontal surface.
- Remove the radiator cap.
- Check the coolant antifreeze.
  - -25... -45 °C (-13... -49 °F)
     » If the antifreeze of the coolant does not meet specifications:
     Correct the coolant antifreeze.
- Check the coolant level in the radiator.

Coolant level 🚯 above radiator fins.	10 mm (0.39 in)
--------------------------------------	-----------------

- If the coolant level does not meet specifications:
- Correct the coolant level.

0 I I (@@ 100)	
Coolant (🕮 p. 109)	
$(\sim p. 100)$	

# 16 COOLING SYSTEM

Mount the radiator cap.

# 16.3 Checking the coolant level

### Warning

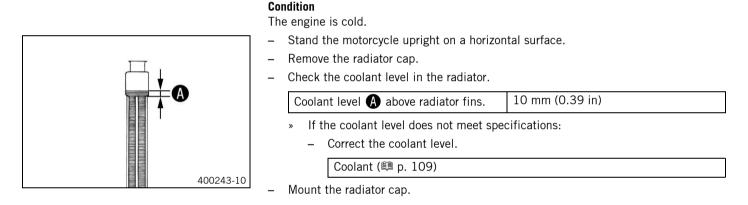

Danger of scalding During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at
  operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses or other components
  of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

# Warning

**Danger of poisoning** Coolant is toxic and a health hazard.

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

# 16.4 Draining the coolant 🔦

# Warning

Danger of scalding During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses or other components
  of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

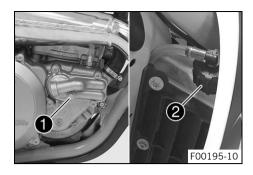

# Warning

Danger of poisoning Coolant is toxic and a health hazard.

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

**Condition** The engine is cold.

#### **COOLING SYSTEM** 16

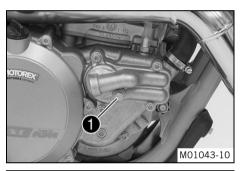

- Position the motorcycle upright.
- Place a suitable container under the water pump cover.
- Remove screw **1**. Take off radiator cap **2**. \_
- Completely drain the coolant.
- Mount and tighten screw **①** with a new seal ring. Guideline

#### 16.5 Refilling coolant 🔌

# Warning

**Danger of poisoning** Coolant is toxic and a health hazard.

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing. \_
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin. \_
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing. \_

\_

Guideline

- Make sure that screw **1** is tightened.
- Stand the motorcycle upright.
- Completely fill the radiator with coolant.

difference **A** must be reached.

Height difference **A** 

Info

	Γ	Coolant	0.9   (1 qt.)	Coolant (🛤 p. 109)
--	---	---------	---------------	--------------------

Move the vehicle into the position shown and prevent it from rolling away. Height

For all of the air to be able to escape from the cooling system, the vehicle

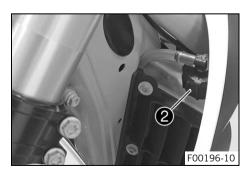

must be raised at the front. If the cooling system is poorly de-aerated, its

cooling power will be reduced and the engine may overheat.

75 cm (29.5 in)

( A ) 4 400677-10

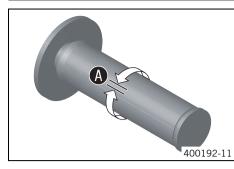

- Return the vehicle to the horizontal position.
- Completely fill the radiator with coolant. \_
- Mount radiator cap **2**.
- Let the engine warm up.

#### **Finishing work**

- Check the coolant level. (I p. 87)

#### 17.1 Checking the play in the throttle cable

# Check the throttle grip for smooth operation.

Move the handlebar to the straight-ahead position. Turn the throttle grip back and forth slightly and determine the play in throttle cable  $\mathbf{A}$ .

Throttle cable play

- If the throttle cable play does not meet specifications:
  - Adjust the play in the throttle cable. 🔌 (🕮 p. 89)

\_

# Danger

Danger of poisoning Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

2... 3 mm (0.08... 0.12 in)

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.
- Start the engine and let it run idle. Move the handlebar to and fro over the entire steering range.

The idle speed must not change.

- If the idle speed changes: »
  - Adjust the play in the throttle cable. A (I p. 89)

#### 17.2 Adjusting the play in the throttle cable 🔧

#### Preparatory work

- Fold the seat up. (
  P. 47)
- \_ Remove the fuel tank. 🔌 (🕮 p. 51)
- \_ Check the throttle cable routing. (
  p. 57)

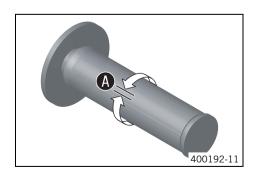

### Main work

- Move the handlebar to the straight-ahead position.
- \_ Push back sleeve 1.
- Ensure that the throttle cable sleeve is pushed fully into adjusting screw **2**. \_
- Loosen nut 3.
- Turn adjusting screw 2 so that there is play  $\Lambda$  in the throttle cable at the throt-\_ tle grip.

# Guideline

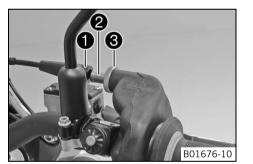

Throttle cable play	2 3 mm (0.08 0.12 in)

- Tighten nut **3**.
- Slide on sleeve 1.
- Check the throttle grip for smooth operation. \_

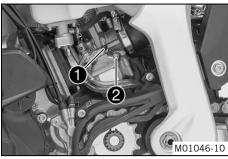

#### **Finishing work**

- Check the play in the throttle cable. (
  p. 89)
- Install the fuel tank. 🔌 (🕮 p. 52)
- Lock the seat. (B) p. 47) \_

#### 17.3 **Carburetor - idle**

The idle setting of the carburetor has a big influence on the starting behavior, stable idling and the response to throttle opening. This means that an engine with a correctly set idle speed is easier to start than if the idle is set wrongly.

#### Info

The carburetor and its components are subject to increased wear caused by engine vibration. Wear can result in malfunctioning.

The factory setting for the carburetor is set for the following values.

Elevation above sea level	500 m (1,640 ft)
Ambient temperature	20 °C (68 °F)

Super unleaded (95 octane) mixed with 2-stroke engine oil (1:80) (1:80) (1:80)

The idle speed is adjusted with adjusting screw 1.

The idle mixture is adjusted with the idle air adjusting screw  $\mathbf{2}$ .

#### Idle air range A

Operation with the throttle slide closed. This range is influenced by adjusting screw and the idle air adjusting screw  $\mathbf{2}$ .

#### Transition range B

Behavior of the engine when the throttle slide is being opened. This range is influenced by the idling jet and by the form of the throttle slide.

If the engine sputters and smokes heavily when it starts despite a good idle and partload setting, and if it abruptly reaches full power at a high rpm, the carburetor setting is too rich, or the float level is too high or the float needle valve is leaky.

#### Part-load range C

Operation with the throttle slide partially open. This range is influenced by the jet needle (form and position). The idle setting influences the engine tuning in the lower range, and the main jet influences the engine tuning in the upper range.

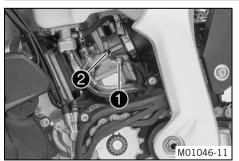

If the engine stutters when accelerating with a partially open throttle slide, the jet needle must be lowered by one notch. If the engine knocks when accelerating at the full power rpm range, the jet needle must be raised. If the above events occur on idle or just above it, the idle system must be set to a leaner setting if the engine is stuttering or to a richer setting if the engine is knocking.

#### Full-load range D

Operation with the throttle slide open (full throttle). This range is influenced by the main jet and jet needle.

If the insulator of a new spark plug is very light or white after a brief ride at full throttle, or if the engine knocks, a larger main jet needs to be used. If the insulator is dark brown or sooty, a smaller main jet needs to be used.

#### 17.4 Carburetor - adjusting idle 🔌

Screw in idle air adjusting screw **1** all the way and turn it to the specified basic position.

## Guideline

Idle air adjusting screw

2.0 rotations

Run the engine until warm.

#### Guideline

Warm-up time

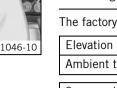

Open

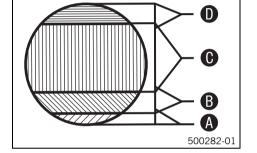

Danger of poisoning Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

≥ 5 min

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.

Adjust the idle speed with adjusting screw 2.

#### Guideline

Choke function deactivated – The choke	lever is pushed in to the stop. (🕮 p. 16)	
Idle speed	1,400 1,500 rpm	

- Turn idle air adjusting screw 1 slowly in a clockwise direction until the idle speed begins to fall.
- Note the position and turn the idle air adjusting screw slowly counterclockwise until the idle speed falls.
- Adjust to the point between these two positions with the highest idle speed.

### Info

If there is a big engine speed rise, reduce the idle speed to a normal level and repeat the above steps.

If the procedure described here does not lead to satisfactory results, the cause may be a wrongly dimensioned idling jet.

If you can turn the idle air adjusting screw to the end without any change of engine speed, you have to mount a smaller idling jet.

After changing the idling jet, start from the beginning with the adjusting steps.

Following extreme air temperature or altitude changes, adjust the idle speed again.

# 17.5 Emptying the carburetor float chamber 🔧

#### Danger

Fire hazard Fuel is highly flammable.

The fuel in the fuel tank expands when warm and can escape if overfilled.

- Do not refuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

# Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.
- Keep fuels correctly in a suitable canister, and out of the reach of children.

Warning

Environmental hazard Improper handling of fuel is a danger to the environment.

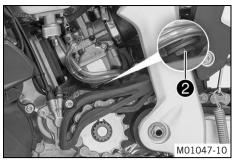

- Do not allow fuel to enter the groundwater, the soil, or the sewage system.

# Info

Carry out this work with a cold engine. Water in the float chamber results in malfunctioning.

### **Preparatory work**

- Turn handle **1** of the fuel tap to the **OFF** position. (Figure C00897-10) p. 16)
  - ✓ Fuel no longer flows from the fuel tank to the carburetor.

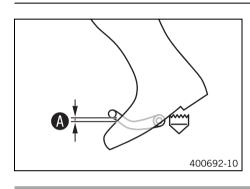

## Main work

- Place a cloth under the carburetor to capture the draining fuel.
- Remove fitting **2**.
- Fully drain the fuel. \_
- Mount and tighten the screw plug.

#### 17.6 Checking the basic position of the shift lever

#### Info

When driving, the shift lever must not touch the driver's boot when in the basic position. When the shift lever keeps touching the boot, the transmission will be subject to an excessive load.

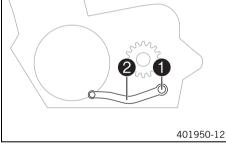

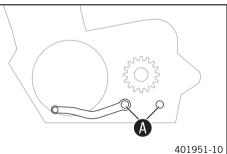

Sit on the vehicle in the riding position and determine distance (A) between the upper edge of your boot and the shift lever.

Distance between shift lever and upper edge of boot	10 20 mm (0.39 0.79 in)
---	-------------------------

- If the distance does not meet specifications:
  - Adjust the basic position of the shift lever.  $\checkmark$  (1) p. 92) \_

# 17.7 Adjusting the basic position of the shift lever 🔧

Remove screw **①** with washers and take off shift lever **②**.

- Clean gear teeth (A) of the shift lever and shift shaft. \_
  - Mount shift lever 2 on the shift shaft in the required position and engage the gearing.

# Info

\_

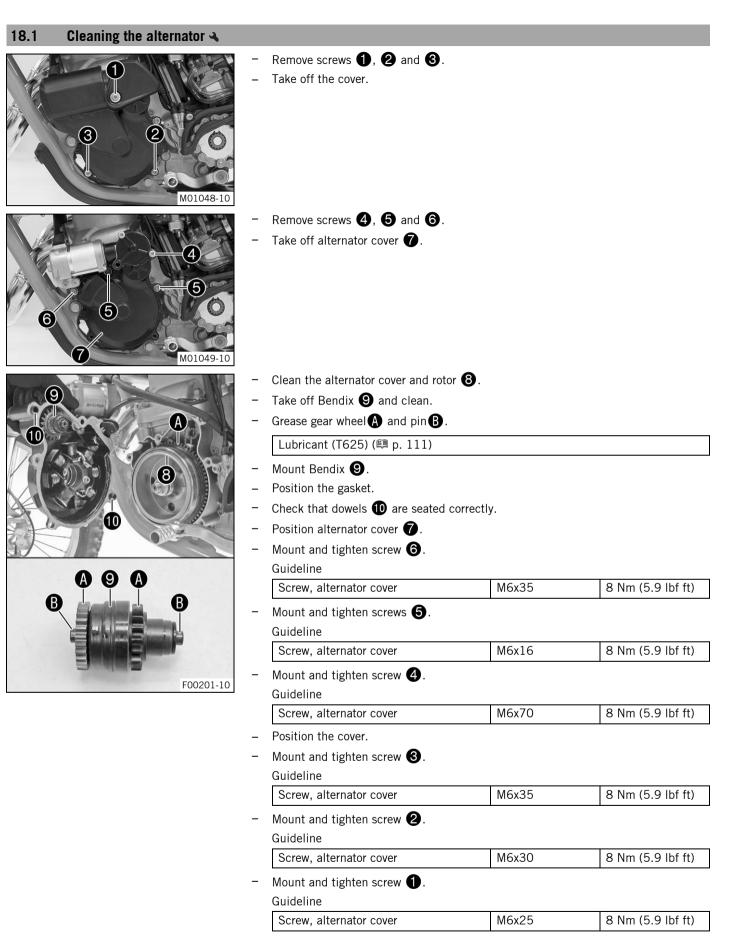

The range of adjustment is limited.

- The shift lever must not come into contact with any other vehicle components during the shift procedure.
- Mount and tighten screw **1** with the washers.

Guideline

Screw, shift lever	M6	14 Nm (10.3 lbf ft)	Loctite <sup>®</sup> 243™	
--------------------	----	------------------------	---------------------------	--

# **18 SERVICE WORK ON THE ENGINE**

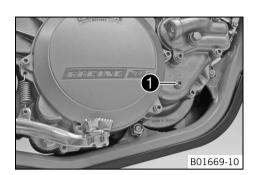

# **18 SERVICE WORK ON THE ENGINE**

# 18.2 Checking the gear oil level

• Info

The gear oil level must be checked when the engine is cold.

#### Preparatory work

Stand the motorcycle upright on a horizontal surface.

#### Main work

- Remove screw **1** from the opening used to check the gear oil level.
- Check the gear oil level.

A small quantity of gear oil must run out of the drilled hole.

- If no gear oil runs out:
- Add gear oil. 🔌 (🕮 p. 95)
- Mount and tighten screw 1 in the opening used to check the gear oil level.
   Guideline

Screw, gear oil level check M6

## 18.3 Changing the gear oil 🔧

# Warning

Danger of scalding Engine and gear oil get very hot when the motorcycle is ridden.

- Wear suitable protective clothing and safety gloves.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

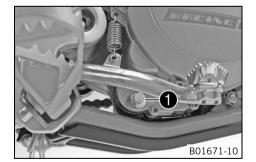

# Warning

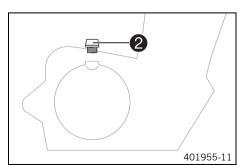

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

e Info

Drain the gear oil while the engine is warm.

#### Preparatory work

- Park the motorcycle on a level surface.
- Place a suitable container under the engine.

### Main work

- Remove the gear oil drain plug with magnet 1.
- Let the gear oil drain fully.
- Thoroughly clean the gear oil drain plug with magnet.
- Clean the sealing surface on the engine.
- Mount and tighten gear oil drain plug with magnet 1 and seal ring.
   Guideline

M12x1.5	20 Nm (14.8 lbf ft)

Remove filler plug 😢 and fill up with gear oil.

Gear oil 0.80 I (0.85 qt.) Engine oil (15W/50) (🕮 p. 109)
---

- Mount and tighten filler plug 2.

# Danger

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.

10 Nm (7.4 lbf ft)

# **18 SERVICE WORK ON THE ENGINE**

- Start the engine and check that it is oil-tight.

#### **Finishing work**

- Check the gear oil level. (🕮 p. 94)

# 18.4 Adding gear oil 🔦

# •

Info

Too little gear oil or poor-quality gear oil results in premature wear to the transmission. The gear oil level should only be added when the engine is cold.

### Preparatory work

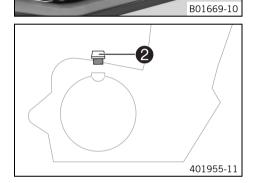

- Park the motorcycle on a level surface.

#### Main work

\_

\_

Remove screw 1 from the opening used to check the gear oil level.

- Remove filler plug 2.
- Add gear oil until it emerges from the drill hole of the gear oil monitoring screw.

	Engine oil (15W/50) (🕮 p. 109)
-	Mount and tighten screw 1 in the opening used to check the gear oil level. Guideline

Screw, gear oil level check	M6	10 Nm (7.4 lbf ft)
-----------------------------	----	--------------------

- Mount and tighten filler plug 2.

# n Dai

Danger

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.

- Start the engine and check that it is oil-tight.

#### Finishing work

# 19 CLEANING, CARE

## 19.1 Cleaning the motorcycle

### Note

**Material damage** Components become damaged or destroyed if a pressure cleaner is used incorrectly.

The high pressure forces water into the electrical components, connectors, throttle cables, and bearings, etc. Pressure which is too high causes malfunctions and destroys components.

- Do not direct the water jet directly on to electrical components, connectors, throttle cables or bearings.
- Maintain a minimum distance between the nozzle of the pressure cleaner and the component.
   Minimum clearance
   60 cm (23.6 in)

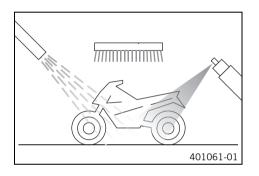

#### Warning Environm

**Environmental hazard** Hazardous substances cause environmental damage.

- Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

# lnfo

If you clean the motorcycle regularly, its value and appearance will be maintained over a long period. Avoid direct sunshine on the motorcycle during cleaning.

- Close off the exhaust system to keep water from entering.
- First remove coarse dirt particles with a gentle spray of water.
- Spray very dirty areas with a normal motorcycle cleaner and then clean with a paintbrush.

Motorcycle cleaner (🕮 p. 111)

## Info

- Use warm water containing normal motorcycle cleaner and a soft sponge. Never apply motorcycle cleaner to the dry vehicle; always rinse with water first.
- After rinsing the motorcycle with a gentle spray of water, allow it to dry thoroughly.
- Remove the plug from the exhaust system.
- Clean the alternator. 🔌 (🕮 p. 93)

## Warning

Danger of accidents Moisture and dirt impair the brake system.

- Brake carefully several times to dry out and remove dirt from the brake linings and the brake discs.
- After cleaning, ride a short distance until the engine reaches operating temperature.

### Info

The heat produced causes water at inaccessible locations in the engine and the brake system to evaporate.

- After the motorcycle has cooled off, lubricate all moving parts and bearings.
- Clean the chain. (🕮 p. 53)
- Treat bare metal parts (except for the brake discs and exhaust system) with anticorrosion materials.

Preserving materials for paints, metal and rubber (🕮 p. 111)

 Treat all plastic parts and powder-coated parts with a mild cleaning and care product.

Special cleaner for glossy and matte paint finishes, metal and plastic surfaces (IP p. 112)

- Grease steering lock (🕮 p. 18).

Universal oil spray (🕮 p. 112)

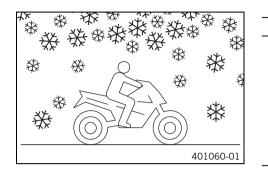

# 19 CLEANING, CARE

## 19.2 Checks and maintenance steps for winter operation

# Info

If the motorcycle is used in the winter, salt can be expected on the roads. Precautions need to be taken against road salt corrosion.

If the vehicle was operated in road salt, clean it with cold water after riding. Warm water would enhance the corrosive effects of salt.

- Clean the motorcycle. (🕮 p. 96)
- Clean the brake system.

### Info

After **EVERY** trip on salted roads, thoroughly wash the brake calipers and brake linings with cold water and dry carefully. This should be done after the parts are cooled down and while they are installed. After riding on salted roads, thoroughly wash the motorcycle with cold water and dry it well.

- Treat the engine, swingarm, and all other bright and zinc-plated parts (except for the brake discs) with a wax-based corrosion inhibitor.

# Info Corr

\_

Corrosion inhibitor is not permitted to come in contact with the brake discs as this would greatly reduce the braking force.

Clean the chain. (🕮 p. 53)

# 20 STORAGE

# 20.1 Storage

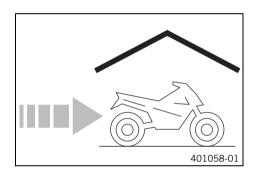

# Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.
- Keep fuels correctly in a suitable canister, and out of the reach of children.

# Info

If you plan to garage the motorcycle for a longer period, perform the following steps or have them performed. Before storing the motorcycle, check all parts for function and wear. If service, repairs, or replacements are necessary, you should do this during the storage period (less workshop overload). In this way, you can avoid long workshop waiting times at the start of the new season.

When refueling for the last time before taking the motorcycle out of service, add fuel additive.

Fuel additive (🕮 p. 111)

- Refuel. (🕮 p. 28)
- Clean the motorcycle. (🕮 p. 96)
- Change the gear oil. 🔧 (🕮 p. 94)

- Remove the battery. 🔦 (🕮 p. 76)
- Recharge the battery. Վ (🕮 p. 77)

### Guideline

Storage temperature of battery without<br/>direct sunshine0... 35 °C (32... 95 °F)

 Store the vehicle in a dry location that is not subject to large fluctuations in temperature.

# Info

KTM recommends jacking up the motorcycle.

- Cover the vehicle with a tarp or similar cover that is permeable to air.

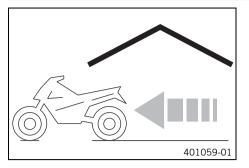

### Info

Do not use non-porous materials since they prevent humidity from escaping, thus causing corrosion.

Avoid running the engine for a short time only. Because the engine will not warm up sufficiently, the water vapor produced during combustion will condense, causing engine parts and the exhaust system to rust.

# 20 STORAGE

# 20.2 Preparing for use after storage

- Remove the motorcycle from the lift stand. (IP p. 39)
  - Install the battery. 🔌 (🕮 p. 76)
- Perform checks and maintenance work when preparing the vehicle for use.
   (
   p. 25)
- Take a test ride.

\_

# 23 SUBSTANCES

# Brake fluid DOT 4 / DOT 5.1

#### Standard/classification

# – DOT

#### Guideline

 Use only brake fluid that complies with the specified standard (see specifications on the container) and that exhibits the corresponding properties.

### Recommended supplier

#### Castrol

- RESPONSE BRAKE FLUID SUPER DOT 4

#### Motorex®

- Brake Fluid DOT 5.1

### Coolant

# Guideline

 Only use high quality coolant with corrosion inhibitor for aluminum motors (even in countries with high temperatures). Using inferior antifreeze can result in corrosion and foaming.

#### Mixture ratio

Antifreeze protection: -2545 °C (-13	anti-corrosion/antifreeze
−49 °F)	distilled water

#### **Recommended supplier**

#### Motorex®

- COOLANT M3.0

### Engine oil (15W/50)

#### Standard/classification

- JASO T903 MA (🕮 p. 113)
- SAE (🕮 p. 113) (15W/50)

#### Guideline

Use only engine oils that comply with the specified standards (see specifications on the container) and that possess the corresponding properties.

#### **Recommended supplier**

#### Motorex®

Top Speed 4T

# Engine oil, 2-stroke

#### Standard/classification

– JASO FD (🕮 p. 113)

#### Guideline

Only use high grade 2-stroke engine oil of a reputable brand.

Fully synthetic

#### **Recommended supplier**

#### Motorex®

Cross Power 2T

## Fork oil (SAE 4) (48601166S1)

#### Standard/classification

– SAE (🕮 p. 113) (SAE 4)

#### Guideline

 Use only oils that comply with the specified standards (see specifications on the container) and that exhibit the corresponding properties.

# 23 SUBSTANCES

# Shock absorber fluid (SAE 2.5) (50180751S1)

#### Standard/classification

– SAE (🕮 p. 113) (SAE 2.5)

#### Guideline

Use only oils that comply with the specified standards (see specifications on the container) and that exhibit the corresponding
properties.

#### Super unleaded (ROZ 95/RON 95/PON 91)

Standard/classification

- DIN EN 228 (ROZ 95/RON 95/PON 91)

#### Guideline

- Only use unleaded super fuel that matches or is equivalent to the specified fuel grade.
- Fuel with an ethanol content of up to 10 % (E10 fuel) is safe to use.

Do not use fuel containing methanol (e. g. M15, M85, M100) or more than 10 % ethanol (e. g. E15, E25, E85, E100).

#### Super unleaded (95 octane) mixed with 2-stroke engine oil (1:80)

#### Standard/classification

- DIN EN 228
- JASO FD (🕮 p. 113) (1:80)

#### Mixture ratio

1:80	Engine oil, 2-stroke (🕮 p. 109)
	Super unleaded (ROZ 95/RON 95/PON 91) (🕮 p. 110)

#### **Recommended supplier**

Motorex®

Cross Power 2T

#### **AUXILIARY SUBSTANCES** 24

# Air filter cleaner

**Recommended supplier** Motorex<sup>®</sup>

Racing Bio Dirt Remover

#### **Chain cleaner**

**Recommended supplier Motorex**®

Chain Clean

# **Fuel additive**

**Recommended supplier** Motorex® Fuel Stabilizer

### Grip adhesive (00062030051)

**Recommended supplier** KTM AG – GRIP GLUE

# High viscosity grease

**Recommended supplier** SKF®

– LGHB 2

# Long-life grease

**Recommended supplier** Motorex<sup>®</sup> Bike Grease 2000

### Lubricant (T625)

**Recommended supplier Molvkote**® 33 Medium \_

### Motorcycle cleaner

**Recommended supplier Motorex**® Moto Clean \_

# **Off-road chain spray**

**Recommended supplier** Motorex® **Chainlube Offroad** \_

### Oil for foam air filter

**Recommended supplier Motorex**<sup>®</sup> **Racing Bio Liquid Power** \_

### Preserving materials for paints, metal and rubber

**Recommended supplier** Motorex® \_

# 24 AUXILIARY SUBSTANCES

### Special cleaner for glossy and matte paint finishes, metal and plastic surfaces

# **Recommended supplier**

Motorex®

– Quick Cleaner

# Universal oil spray

Recommended supplier Motorex®

– Joker 440 Synthetic

# 25 STANDARDS

# **JASO T903 MA**

Different technical development directions required a new specification for 4-stroke motorcycles – the JASO T903 MA Standard. Earlier, engine oils from the automobile industry were used for 4-stroke motorcycles because there was no separate motorcycle specification. Whereas long service intervals are demanded for automobile engines, high performance at high engine speeds are in the foreground for motorcycle engines. In most motorcycles, the gearbox and the clutch are lubricated with the same oil as the engine. The JASO MA Standard meets these special requirements.

### SAE

The SAE viscosity classes were defined by the Society of Automotive Engineers and are used for classifying oils according to their viscosity. The viscosity describes only one property of oil and says nothing about quality.

### **JASO FD**

JASO FD is a classification for a 2-stroke engine oil that was specifically developed for the extreme demands of racing. Thanks to first rate synthetic esters and specially designed additives, superb combustion is achieved even under extreme operating conditions.

# 26 LIST OF ABBREVIATIONS

# 27 LIST OF SYMBOLS

### 27.1 Yellow and orange symbols

Yellow and orange symbols indicate an error condition that requires prompt intervention. Active driving aids are also represented by yellow or orange symbols.

FI	FI warning lamp (MIL) – inoperative
	Fuel level warning lamp – inoperative

# 27.2 Green and blue symbols

Green and blue symbols reflect information.

High beam indicator light lights up blue – High beam is switched on.
Turn signal indicator light flashes green – Turn signal is switched on.
