## **OWNER'S MANUAL 2018**

## Freeride 250 F

Art. no. 3213652en

Congratulations on your decision to purchase a KTM motorcycle. You are now the owner of a state-of-the-art sports motorcycle that will give you enormous pleasure if you service and maintain it properly.

We hope you enjoy your new ride!

Enter the serial numbers of your vehicle below.

Chassis number (@ p. 13)	Dealer's stamp
Faring name of 68 at 12)	
Engine number (🕮 p. 13)	
Key number (₽ p. 13)	

The Owner's Manual contained the latest information for this model series at the time of going to print. Slight deviations resulting from continuing development and design of the motorcycles can, however, not be completely excluded.

All specifications are non-binding. KTM Sportmotorcycle GmbH specifically reserves the right to modify or delete technical specifications, prices, colors, forms, materials, services, designs, equipment, etc., without prior notice and without specifying reasons, to adapt these to local conditions, as well as to stop production of a particular model without prior notice. KTM accepts no liability for delivery options, deviations from figures and descriptions, misprints, and other errors. The models portrayed partly contain special equipment that does not belong to the regular scope of supply.

## 1.1 Symbols used

The meaning of specific symbols is described below.

Indicates an expected reaction (e.g. of a work step or a function).

Indicates an unexpected reaction (e.g. of a work step or a function).

All work marked with this symbol requires specialist knowledge and technical understanding. In the interest of your own safety, have these jobs performed by an authorized KTM workshop! Your motorcycle will be optimally cared for there by specially trained experts using the auxiliary tools required.

Indicates a page reference (more information is provided on the specified page).

Indicates information with more details or tips.

Indicates the result of a testing step.

Indicates the end of an activity including potential reworking.

### 1.2 Formats used

**Underlined terms** 

The typographical formats used in this document are explained below.

Proprietary name	Indicates a proprietary name.	
Name®	Indicates a protected name.	
Brand™	Indicates a brand available on the open market.	

are explained in the glossary.

Refer to technical details of the vehicle or indicate technical terms, which

### 2.1 Use definition — intended use

This vehicle has been designed and built to withstand the normal stresses and strains of offroad use.

#### Info

This vehicle is only authorized for operation on public roads in the homologated (restricted) version. The derestricted version of this vehicle must only be operated in closed off areas away from public highway traffic.

This vehicle has been designed for trial riding and difficult offroad terrain and not for motocross.

### 2.2 Misuse

The vehicle must only be used as intended.

Dangers can arise for people, property and the environment through use not as intended.

Any use of the vehicle beyond the intended and defined use constitutes misuse.

Misuse also includes the use of operating and auxiliary fluids which do not meet the required specification for the respective use.

### 2.3 Safety advice

A number of safety instructions need to be followed to operate the model described safely. Therefore read this instruction and all further instructions included carefully. The safety instructions are highlighted in the text and are referred to at the relevant passages.

#### Info

Various information and warning labels are attached in prominent locations on the model described. Do not remove any information or warning labels. If they are missing, you or others may not recognize dangers and may therefore be injured.

## 2.4 Degrees of risk and symbols

### **Danger**

Indicates a danger that will immediately and invariably lead to fatal or serious permanent injury if the appropriate measures are not taken.

#### Warning

Indicates a danger that is likely to lead to fatal or serious injury if the appropriate measures are not taken.

#### Caution

Indicates a danger that may lead to minor injuries if the appropriate measures are not taken.

### Note

Indicates a danger that will lead to considerable machine and material damage if the appropriate measures are not taken.

#### Warning

Indicates a danger that will lead to environmental damage if the appropriate measures are not taken.

### 2.5 Tampering warning

Tampering with the noise control system is prohibited. Federal law prohibits the following acts or the causing thereof:

- 1 The removal or rendering inoperative by any person other than for purposes of maintenance, repair, or replacement, of any device or element of design incorporated into any new vehicle for the purpose of noise control prior to its sale or delivery to the ultimate purchaser or while it is in use, or
- 2 the use of the vehicle after such device or element of design has been removed or rendered inoperative by any person.

Among those acts presumed to constitute tampering are the acts listed below:

- 1 Removal or puncturing of the main silencer, baffles, header pipes or any other components which conduct exhaust gases.
- 2 Removal or puncturing of parts of the intake system.
- 3 Lack of proper maintenance.
- 4 Replacing moving part of the vehicle, or parts of the exhaust or intake system, with parts other than those specified by the manufacturer.

### 2.6 Safe operation

#### **Danger**

**Danger of accidents** A rider who is not fit to ride poses a danger to him or herself and others.

- Do not operate the vehicle if you are not fit to ride due to alcohol, drugs or medication.
- Do not operate the vehicle if you are physically or mentally impaired.

#### Danger

Danger of poisoning Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.

#### Warning

**Danger of burns** Some vehicle components become very hot when the vehicle is operated.

- Do not touch any parts such as the exhaust system, radiator, engine, shock absorber, or brake system before the vehicle parts have cooled down.
- Let the vehicle parts cool down before you perform any work on the vehicle.

Only operate the vehicle when it is in perfect technical condition, in accordance with its intended use, and in a safe and environmentally compatible manner.

The vehicle should only be used by trained persons.

Have malfunctions that impair safety promptly eliminated by an authorized KTM workshop.

Adhere to the information and warning labels on the vehicle.

#### 2.7 Protective clothing

#### Warning

**Risk of injury** Missing or poor protective clothing presents an increased safety risk.

- Wear appropriate protective clothing such as helmet, boots, gloves as well as trousers and a jacket with protectors on all rides.
- Always wear protective clothing that is in good condition and meets the legal regulations.

In the interest of your own safety, KTM recommends that you only operate the vehicle while wearing protective clothing.

### 2.8 Work rules

Special tools are necessary for certain tasks. The tools are not a component of the vehicle, but can be ordered using the number in parentheses. Example: bearing puller (15112017000)

During assembly, use new parts to replace parts which cannot be reused (e.g. self-locking screws and nuts, seals, sealing rings, O-rings, pins, and lock washers).

In the case of certain screws, a thread locker (e.g. **Loctite®**) is required. Apply according to the manufacturer's instructions.

After disassembly, clean the parts that are to be reused and check them for damage and wear. Change damaged or worn parts.

After completing a repair or service work, check the operating safety of the vehicle.

#### 2.9 Environment

If you use your motorcycle responsibly, you can ensure that problems and conflicts do not occur. To protect the future of the motorcycle sport, make sure that you use your motorcycle legally, display environmental consciousness, and respect the rights of others.

When disposing of used oil, other operating and auxiliary fluids, and used components, comply with the laws and regulations of the respective country.

Because motorcycles are not subject to the EU regulations governing the disposal of used vehicles, there are no legal regulations that pertain to the disposal of an end-of-life motorcycle. Your authorized KTM dealer will be glad to advise you.

#### 2.10 Owner's Manual

It is important that you read this Owner's Manual carefully and completely before making your first trip. The Owner's Manual contains useful information and many tips on how to operate, handle, and maintain your motorcycle. Only then will you find out how to customize the vehicle ideally for your own use and how you can protect yourself from injury.

Keep the Owner's Manual in an accessible place to enable you to refer to it as needed.

If you would like to know more about the vehicle or have questions on the material you read, please contact an authorized KTM dealer.

The Owner's Manual is an important component of the vehicle and must be handed over to the new owner if the vehicle is sold.

The Owner's Manual is also available for download from your authorized KTM dealer and on the KTM website. International KTM Website: http://www.ktm.com

### 3.1 Manufacturer and implied warranty

The work specified in the service schedule may only be performed in an authorized KTM workshop and must be recorded in both the Service & Warranty Booklet and in **KTM Dealer.net**, otherwise any warranty coverage will become void. Damage or secondary damage caused by tampering with and/or conversions on the vehicle are not covered by the warranty.

Additional information on the manufacturer or implied warranty and the procedures involved can be found in the Service & Warranty Booklet.

#### 3.2 Operating and auxiliary substances

#### Warning

**Environmental hazard** Improper handling of fuel is a danger to the environment.

- Do not allow fuel to enter the groundwater, the soil, or the sewage system.

Use operating and auxiliary substances (such as fuel and lubricants) as specified in the Owner's Manual.

#### 3.3 Spare parts, accessories

For your own safety, only use spare parts and accessory products that are approved and/or recommended by KTM and have them installed by an authorized KTM workshop. KTM accepts no liability for other products and any resulting damage or loss.

Certain spare parts and accessory products are specified in parentheses in the descriptions. Your authorized KTM dealer will be glad to advise you.

The current KTM PowerParts for your vehicle can be found on the KTM website.

International KTM Website: http://www.ktm.com

#### 3.4 Service

A prerequisite for perfect operation and prevention of premature wear is that the service, care, and tuning work on the engine and chassis is properly carried out as described in the Owner's Manual. Incorrect adjustment and tuning of the engine and chassis can lead to damage and breakage of components.

Use of the vehicle under difficult conditions, such as on sand or on wet and muddy surfaces, can lead to considerably more rapid wear of components such as the drive train, brake system, or suspension components. For this reason, it may be necessary to inspect or replace parts before the next scheduled service.

It is imperative that you adhere to the stipulated run-in times and service intervals. If you observe these exactly, you will ensure a much longer service life for your motorcycle.

#### 3.5 Figures

The figures contained in the manual may depict special equipment.

In the interest of clarity, some components may be shown disassembled or may not be shown at all. It is not always necessary to disassemble the component to perform the activity in question. Please follow the instructions in the text.

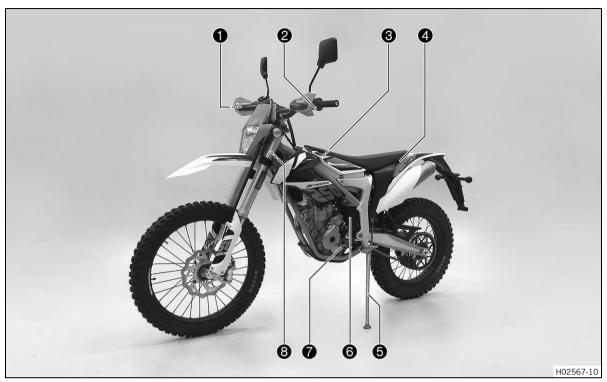

#### 3.6 Customer service

Your authorized KTM dealer will be happy to answer any questions you may have on your vehicle and KTM.

## 3 IMPORTANT NOTES

A list of authorized KTM dealers can be found on the KTM website. International KTM Website: http://www.ktm.com

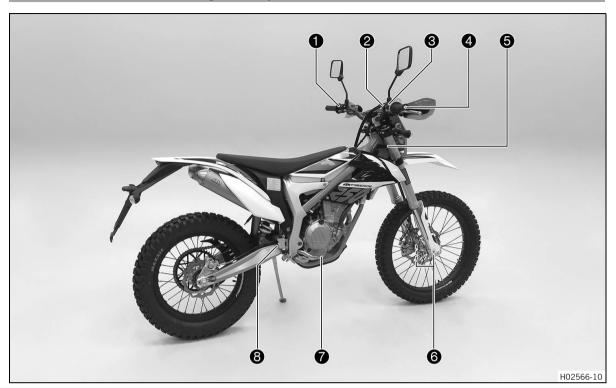

## 4.1 View of vehicle, front left (example)

- Hand brake lever (
   p. 15)
- 2 Clutch lever ( p. 15)
- **3** Filler cap
- 4 Seat release
- **5** Side stand (♠ p. 20)
- **6** Battery
- **7** Shift lever (

  p. 19)
- 8 Steering lock (🕮 p. 21)

## 4.2 View of vehicle, rear right (example)

- Horn button (學 p. 16)
- **1** Light switch (♥ p. 16)
- **1** Turn signal switch (

  □ p. 16)
- 2 Emergency OFF switch ( p. 16)
- **3** Electric starter button (

  p. 17)
- **4** Throttle grip (

  □ p. 15)
- **6** Chassis number (

  p. 13)
- **5** Type label (🕮 p. 13)
- 6 Fork part number (🕮 p. 14)
- 7 Foot brake lever (🕮 p. 20)
- 8 Level viewer for brake fluid, rear

## 5.1 Chassis number

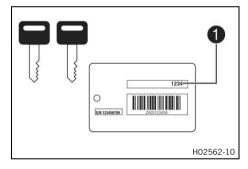

The chassis number **1** is stamped on the right side of the steering head.

## 5.2 Type label

Type label 1 is fixed to the front of the steering head.

## 5.3 Key number

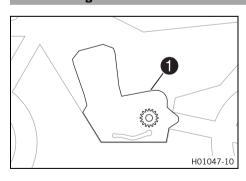

The key number 1 can be found on the **KEYCODECARD**.

#### Info

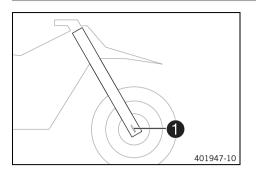

You need the key number to order a spare key. Keep the **KEYCODECARD** in a safe place.

## 5.4 Engine number

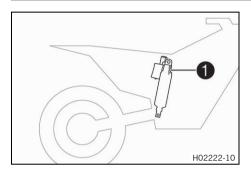

The engine number **1** is embossed on the left side of the engine above the engine sprocket.

## 5.5 Fork part number

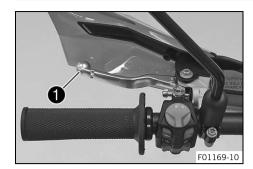

The fork part number **1** is stamped on the inner side of the axle clamp.

## 5.6 Shock absorber article number

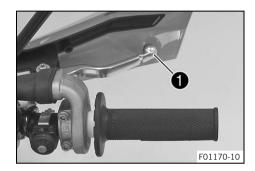

Shock absorber article number is stamped on the top of the shock absorber above the adjusting ring towards the motor side.

## 6.1 Clutch lever

The clutch lever **1** is fitted on the left side of the handlebar. The clutch is hydraulically operated and self-adjusting.

## 6.2 Hand brake lever

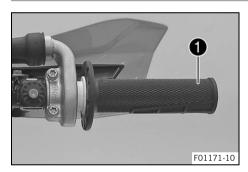

The hand brake lever 

is fitted on the right side of the handle-har

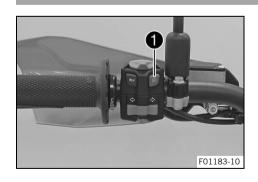

The front brake is engaged using the hand brake lever.

## 6.3 Throttle grip

The throttle grip 1 is fitted on the right side of the handlebar.

## 6.4 Kill switch

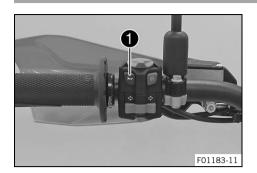

Kill switch 1 is fitted on the left side of the handlebar.

#### Possible states

- Kill switch 

  in basic position In this position, the ignition circuit is closed and the engine can be started.
- Kill switch ⋈ pressed In this position, the ignition circuit is interrupted, a running engine stops, and a non-running engine will not start.

### 6.5 Horn button

The horn button 1 is fitted on the left side of the handlebar.

#### Possible states

- Horn button **>** in neutral position
- Horn button 
   pressed The horn is operated in this position.

## 6.6 Light switch

The light switch **1** is fitted on the left side of the handlebar.

### Possible states

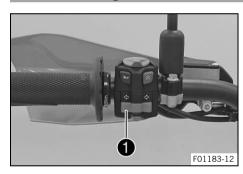

Low beam on – Light switch is in the central position. In this position, the low beam and tail light are switched on.

High beam on – The light switch is turned counterclockwise. In this position, the high beam and the tail light are switched on.

## 6.7 Turn signal switch

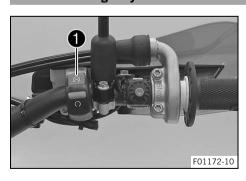

Turn signal switch 1 is fitted on the left side of the handlebar.

#### Possible states

	Turn signal light off – Turn signal switch is in the central position.
4	Turn signal light, left, on – Turn signal switch is turned to the left.
-	Turn signal light, right, on – Turn signal switch is turned to the right.

## 6.8 Emergency OFF switch

The emergency OFF switch **1** is fitted on the right side of the handlebar.

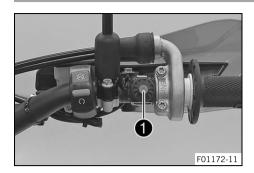

### Possible states

Ignition off – In this position, the ignition circuit is interrupted, a running engine stops, and a non-running engine will not start.

Ignition on – In this position, the ignition circuit is closed and the engine can be started.

Electric starter button 

is fitted on the right side of the handlebar.

#### Possible states

- Electric starter button (3) in basic position
- Electric starter button ③ pressed In this position, the electric starter is actuated.

### 6.10 Indicator lamps overview

#### Possible states

<b>≣</b> ○	The high beam indicator lamp lights up blue – The high beam is switched on.
	Malfunction indicator lamp lights up/flashes yellow  – The <u>OBD</u> has detected an error in the vehicle electronics. Come safely to a halt, and contact an authorized KTM workshop.
<b>₽</b>	The fuel level warning lamp lights up yellow – The fuel level has reached the reserve mark.
( <del>+</del> + <del>+</del> )	Turn signal indicator lamp flashes green – The turn signal is switched on.

### 6.11 Opening the filler cap

## **Danger**

**Fire hazard** Fuel is highly flammable.

The fuel in the fuel tank expands when warm and can escape if overfilled.

- Do not refuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

#### Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

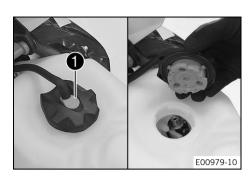

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.
- Keep fuels correctly in a suitable canister, and out of the reach of children.

#### Warning

**Environmental hazard** Improper handling of fuel is a danger to the environment.

- Do not allow fuel to enter the groundwater, the soil, or the sewage system.

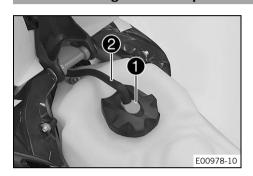

#### Preparatory work

Fold the seat up. (
p. 64)

#### Main work

Press release button 1, turn the filler cap counterclockwise, and lift it free.

6.12 Closing the filler cap

#### Main work

Replace the filler cap and turn clockwise until the release button 1 locks in place.

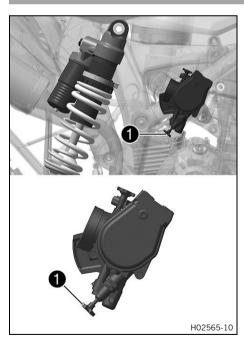

#### Info

Run the fuel tank breather hose **2** without kinks.

#### **Finishing work**

6.13 **Cold start button** 

The cold start button 1 is fitted on the bottom of the throttle valve body.

The injection system extends the injection time if the engine is cold and the outside temperature is low. To help the engine burn the increased amount of fuel, it must be supplied with additional oxygen by pushing the cold start button.

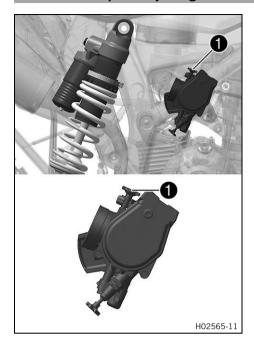

After briefly opening up the throttle and then releasing the throttle grip again, or turning the throttle grip towards the front, the cold start button returns to its original position.

Check whether the cold start button has returned to its basic position.

#### Possible states

- The cold start button is activated The cold start button is pushed in all the way.
- The cold start button is deactivated The cold start button is in its basic position.

The idle setting of the throttle valve body has a big influence on the vehicle's starting behavior, on stable idling, and on vehicle response when the throttle is opened.

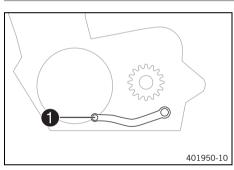

An engine with a correctly set idle speed is easier to start than an engine with the idle speed set incorrectly.

The idle speed is adjusted using the idle speed adjusting screw 1.

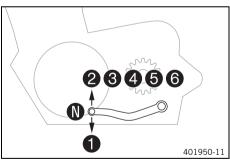

Increase the idle speed by turning the idle speed adjusting screw clockwise.

Decrease the idle speed by turning the idle speed adjusting screw counterclockwise.

## 6.15 Shift lever

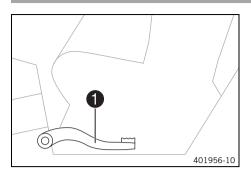

Shift lever 1 is mounted on the left side of the engine.

The gear positions can be seen in the photograph.

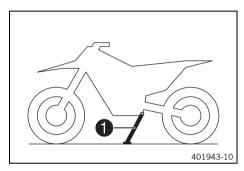

The neutral or idle position is between the first and second gears.

## 6.16 Foot brake lever

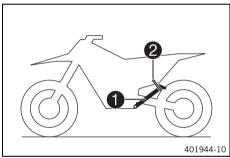

Foot brake lever **1** is located in front of the right footrest. The foot brake lever is used to activate the rear brake.

## 6.17 Side stand

The side stand 1 is attached to the left side of the vehicle.

The side stand is used for parking the motorcycle.

#### Info

When you are riding, side stand 1 must be folded up and secured with rubber band 2.

## 6.18 Ignition lock

The ignition lock **1** is on the right behind the headlight mask.

#### Possible states

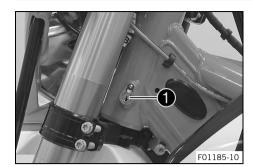

Ignition off – In this position, the ignition circuit is interrupted, a running engine stops, and a non-running engine will not start.

Ignition on – In this position, the ignition circuit is closed and the engine can be started.

## 6.19 Steering lock

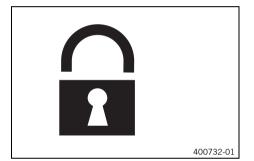

Steering lock is fitted on the left side of the steering head. The steering lock is used to lock the steering. Steering, and therefore riding, is no longer possible.

## 6.20 Locking the steering

#### Note

Danger of damage The parked vehicle can roll away or fall over.

- Park the vehicle on a firm and level surface.

- Park the vehicle.

- Turn the handlebar as far as possible to the right.
- Grease steering lock regularly.

Universal oil spray (🕮 p. 147)

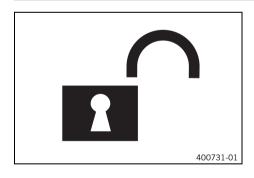

- - ✓ Steering is no longer possible.

#### Info

Never leave the key in the steering lock.

## 6.21 Unlocking the steering

- - $\checkmark \;\;$  You can now steer the bike again.

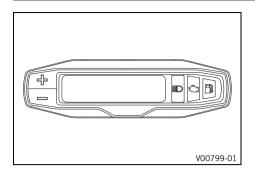

#### Info

Never leave the key in the steering lock.

21

#### 7.1 Combination instrument overview

- Press the button 

   to control different functions.

#### Info

When the vehicle is delivered, only the **SPEED/H** and **SPEED/ODO** display modes are activated.

### 7.2 Activation and test

#### **Activating combination instrument**

The combination instrument is activated when one of the buttons is pressed or an impulse comes from the wheel speed sensor.

#### Display test

To enable you to check that the display is functioning properly, all display segments light up briefly.

#### WS (wheel size)

After the display function check, the wheel circumference **WS** is displayed briefly.

#### Info

The number 2205 equals the circumference of the 21" front wheel with standard tires.

The display then changes to the last selected mode.

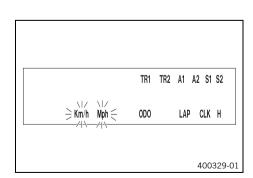

## 7.3 Adjusting the kilometers or miles

#### Info

If you change the unit, the value **000** is retained and converted accordingly.

The values TR1, TR2, A1, A2 and S1 are cleared when the unit of measure is changed.

#### Condition

The motorcycle is stationary.

- Press the button 

  for 2–3 seconds.
  - The Setup menu is displayed and the active functions are shown.

## Adjusting the Km/h

Press the button +.

#### Adjusting the Mph

Press the button =.

- Wait 3 5 seconds.
  - ✓ The settings are stored.

#### Info

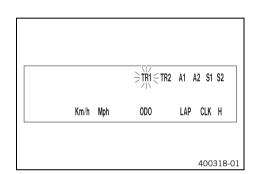

If no button is pressed for 10 - 12 seconds, or if an impulse comes from the wheel speed sensor, the settings are automatically saved and the setup menu is closed.

## 7.4 Adjusting the combination instrument

#### Info

When the vehicle is delivered, only the SPEED/H and SPEED/ODO display modes are activated.

#### Condition

The motorcycle is stationary.

- Repeatedly press the button 
   ■ briefly until 
   ■ appears at the bottom right of the display.
- Press the button  $\pm$  for 2–3 seconds.
  - ✓ The Setup menu is displayed and the active functions are shown.

#### Info

If no button is pressed for 10 - 12 seconds, the settings are automatically saved.

If no button is pressed for 20 seconds, or if an impulse comes from the wheel speed sensor, the settings are automatically saved and the setup menu is closed.

- Repeatedly press the button 
   ■ briefly until the desired function flashes.
  - ✓ The selected function flashes.

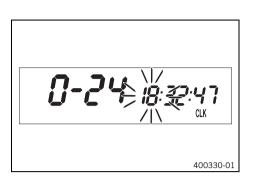

#### **Activating the function**

- Press the button ±.
  - ✓ The symbol continues to appear in the display and the next function appears.

#### Deactivating a function

- Press the button =.
  - ✓ The symbol disappears in the display and the next function appears.

### 7.5 Adjusting the clock

#### Condition

The motorcycle is stationary.

- Press the button 

  for 2–3 seconds.
  - ✓ The hour display flashes.
- Adjust the hour display with the button  $\pm$  and/or button  $\equiv$ .
- Wait 3 5 seconds.
  - ✓ The next segment of the display flashes and can be set.

#### Info

The seconds can only be set to zero.

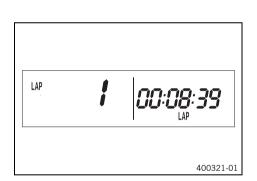

If no button is pressed for 15 - 20 seconds, or if an impulse comes from the wheel speed sensor, the settings are automatically saved and the setup menu is closed.

### 7.6 Viewing the lap time

#### Info

This function can only be opened if lap times have actually been timed.

#### Condition

The motorcycle is stationary.

- Briefly press the button ±.
  - ✓ LAP 1 appears on the left side of the display.
- The laps 1 10 can be viewed with the button =.
- Press and hold the button 

  for 3 5 seconds.
  - The lap times are deleted.
- - ✓ Next display mode

#### Info

When a signal from the wheel speed sensor arrives, the left side of the display changes back to the **SPEED** mode.

## 7.7 Display mode SPEED (speed)

Repeatedly press the button 

 briefly until SPEED appears on

 the left side of the display.

The current speed is displayed in the **SPEED** display mode. The current speed can be displayed in **Km/h** or **Mph**.

#### Info

Make the setting according to the country. When an impulse comes from the front wheel, the left side of the display changes to the **SPEED** mode and the current speed is shown.

### 7.8 Display mode SPEED/H (operating hours)

#### Condition

- The motorcycle is stationary.

In display mode  ${\bf H}$ , the service hours of the engine are displayed. The service hour counter stores the total traveling time.

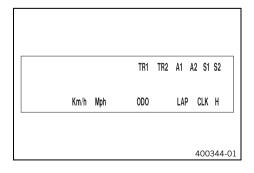

#### Info

The service hour counter is necessary for ensuring that service work is carried out at the right intervals. If the combination instrument is in  $\bf H$  display mode when starting off, it automatically changes to the  $\bf 000$  display mode.

The **H** display mode is suppressed during the journey.

Press the button # for 2–3 seconds.	The display changes to the functions setup menu.
Briefly press the button +.	Next display mode
Press the button for 2–3 seconds.	No function
Briefly press the button	No function

## 7.9 Setup menu

#### Condition

- The motorcycle is stationary.
- Press the button + for 2-3 seconds.

The Setup menu displays the active functions.

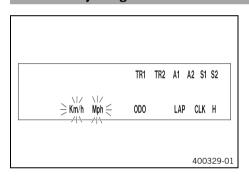

#### Info

Repeatedly press the button  $\blacksquare$  briefly until the desired function is reached.

If no button is pressed for 20 seconds, the settings are automatically saved.

Briefly press the button ∓.	Activates the flashing display and changes to the next display
Press the button ∓ for 2–3 seconds.	No function
Briefly press the button .	Deactivates the flashing display and changes to the next display
Press the button = for 2–3 seconds.	No function
Wait 3 - 5 seconds.	Changes to the next display without changes
Wait 10 - 12 seconds.	Setup menu starts, stores the settings, and changes to <b>H</b> or <b>ODO</b> .

## 7.10 Adjusting the unit of measurement

#### Condition

- The motorcycle is stationary.
- Press the button 

  for 2–3 seconds.
- Repeatedly press the button  $\blacksquare$  briefly until **Km/h** / **Mph** flashes. In measurement unit mode, you can change the unit of measurement.

#### Info

If no button is pressed for 5 seconds, the settings are automatically saved.

Briefly press the button ∓.	Starts selection, activates <b>Km/h</b> display
Press the button # for 2–3 seconds.	No function
Briefly press the button .	Activates <b>Mph</b> display
Press the button = for 2–3 seconds.	No function
Wait 3 - 5 seconds.	Changes to the next display, changes from selection to the Setup menu
Wait 10 - 12 seconds.	Stores and closes the Setup menu

## 7.11 Display mode SPEED/CLK (time)

 Repeatedly press the button # briefly until CLK appears at the bottom right of the display.

The time is shown in display mode CLK.

Press the button # for 2–3 seconds.	The display changes to the Setup menu of the clock.
Briefly press the button +.	Next display mode
Press the button = for 2–3 seconds.	No function
Briefly press the button .	No function

## 7.12 Adjusting the clock

#### Condition

400319-01

- The motorcycle is stationary.
- Repeatedly press the button 

   briefly until CLK appears at the bottom right of the display.
- Press the button 

  for 2–3 seconds.

Press the button # for 2–3 seconds.	Increases the value
Briefly press the button +.	Increases the value
Press the button = for 2–3 seconds.	Reduces the value
Briefly press the button .	Reduces the value
Wait 3 - 5 seconds.	Changes to the next value
Wait 10 - 12 seconds.	Closes the SETUP menu

## 7.13 Display mode SPEED/LAP (lap time)

 Repeatedly press the button + briefly until LAP appears at the bottom right of the display.

In the  ${\bf LAP}$  display mode, up to 10 lap times can be timed with the stop watch.

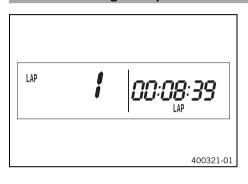

#### Info

If the lap time continues running after the button  $\equiv$  is pressed, 9 memory locations are occupied. Lap 10 must be timed using the button  $\mp$ .

Press the button $\pm$ for 2–3 seconds.	The stop watch and the lap time are reset.
Briefly press the button +.	Next display mode
Press the button = for 2–3 seconds.	Stops the clock.
Briefly press the button =.	Starts the stop watch or stop the current lap time measurement, stores it and the stop watch starts the next lap.

## 7.14 Viewing the lap time

#### Condition

- The motorcycle is stationary.
- Repeatedly press the button 

   ■ briefly until LAP appears at the bottom right of the display.
- Briefly press the button ±.

Press the button   ton   for 2–3 seconds.	The stop watch and the lap time are reset.
Briefly press the button +.	Select a lap from 1 – 10
Press the button = for 2–3 seconds.	No function
Briefly press the button .	View the next lap time.

## 7.15 Display mode SPEED/ODO (odometer)

The total traveled distance is shown in display mode **0D0**.

Press the but- ton   for 2–3 seconds.	No function
Briefly press the button ∓.	Next display mode
Press the button = for 2–3 seconds.	No function
Briefly press the button	No function

## 7.16 Display mode SPEED/TR1 (trip master 1)

**TR1** (trip master 1) runs constantly and counts up to 999.9. You can use it to measure trips or the distance between refueling stops

TR1 is coupled with A1 (average speed 1) and S1 (stop watch 1).

#### Info

If 999.9 is exceeded, the values of TR1, A1 and S1 are automatically reset to 0.0.

Press the button   for 2–3 seconds.	Displays of TR1, A1 and S1 are reset to 0.0.
Briefly press the button ★.	Next display mode
Press the button ☐ for 2–3 seconds.	No function
Briefly press the button .	No function

### 7.17 Display mode SPEED/TR2 (trip master 2)

TR2 (trip master 2) runs constantly and counts up to 999.9.

Press the button # for 2–3 seconds.	Clears the values TR2 and A2.
Briefly press the button +.	Next display mode
Press the button = for 2–3 seconds.	Reduces value of TR2.
Briefly press the button .	Reduces value of TR2.

## 7.18 Adjusting TR2 (trip master 2)

#### Condition

- The motorcycle is stationary.
- Repeatedly press the button 
   ■ briefly until TR2 appears at the top right of the display.
- Press the button = for 2−3 seconds until TR2 flashes.

The displayed value can be set manually with the button  $\blacksquare$  and the button  $\blacksquare$ . This is a very practical function when riding using the road book.

#### Info

The **TR2** value can also be corrected manually during the journey with the button  $\boxplus$  and the button  $\blacksquare$ . If 999.9 is exceeded, the value of **TR2** is automatically reset to 0.0.

Press the button $+$ for 2–3 seconds.	Increases value of TR2.
Briefly press the button +.	Increases value of TR2.
Press the button = for 2–3 seconds.	Reduces value of <b>TR2</b> .
Briefly press the button .	Reduces value of TR2.
Wait 10 - 12 seconds.	Stores and closes the Setup menu.

## 7.19 Display mode SPEED/A1 (average speed 1)

 Repeatedly press the button # briefly until A1 appears at the top right of the display.

**A1** (average speed 1) shows the average speed calculated using **TR1** (trip master 1) and **S1** (stop watch 1).

The calculation of this value is activated by the first impulse of the wheel speed sensor and ends 3 seconds after the last impulse.

Press the button # for 2–3 seconds.	Displays of TR1, A1 and S1 are reset to 0.0.
Briefly press the button +.	Next display mode
Press the button = for 2–3 seconds.	No function
Briefly press the button =.	No function

## 7.20 Display mode SPEED/A2 (average speed 2)

 Repeatedly press the button # briefly until A2 appears at the top right of the display.

**A2** (average speed 2) shows the average speed on the basis of the current speed if the stop watch **S2** (stop watch 2) is running.

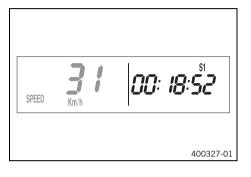

#### Info

The displayed value can differ from the actual average speed if **S2** was not stopped after the ride.

Briefly press	Next display mode
the button $\pm$ .	

Press the button + for 2-3 seconds.	No function
Press the button = for 2–3 seconds.	No function
Briefly press the button .	No function

## 7.21 Display mode SPEED/S1 (stop watch 1)

- Repeatedly press the button 

   briefly until S1 appears at the top right of the display.
- **\$1** (Stop watch 1) shows the riding time based on **TR1** and continues running as soon as an impulse arrives from the wheel speed sensor.

The calculation of this value starts with the first impulse from the wheel speed sensor and ends 3 seconds after the last impulse.

Press the button # for 2–3 seconds.	Displays of TR1, A1 and S1 are reset to 0.0.
Briefly press the button +.	Next display mode
Press the button for 2–3 seconds.	No function
Briefly press the button .	No function

## 7.22 Display mode SPEED/S2 (stop watch 2)

- **\$2** (Stop watch 2) is a manual stop watch.

If **\$2** is running in the background, the display **\$2** flashes.

Press the button + for 2-3 seconds.	The displays of <b>S2</b> and <b>A2</b> are set to 0,0.
Briefly press the button +.	Next display mode
Press the button = for 2–3 seconds.	No function
Briefly press the button —.	Starts or stops <b>\$2</b> .

#### 7.23 Table of functions

Display	Press the button # for 2–3 seconds.	Briefly press the button ₩.	Press the button — for 2–3 seconds.	Briefly press the button ■.	Wait 3 - 5 seconds.	Wait 10 - 12 seconds.
Display mode SPEED/H (oper- ating hours)	The display changes to the functions setup menu.	Next display mode	No function	No function		
Setup menu	No function	Activates the flashing display and changes to the next dis- play	No function	Deactivates the flashing display and changes to the next dis- play	Changes to the next dis- play without changes	Setup menu starts, stores the settings, and changes to <b>H</b> or <b>ODO</b> .
Adjusting the unit of measurement	No function	Starts selection, activates <b>Km/h</b> display	No function	Activates <b>Mph</b> display	Changes to the next dis- play, changes from selec- tion to the Setup menu	Stores and closes the Setup menu
Display mode SPEED/CLK (time)	The display changes to the Setup menu of the clock.	Next display mode	No function	No function		
Adjusting the clock	Increases the value	Increases the value	Reduces the value	Reduces the value	Changes to the next value	Closes the SETUP menu
Display mode SPEED/LAP (lap time)	The stop watch and the lap time are reset.	Next display mode	Stops the clock.	Starts the stop watch or stop the current lap time measurement, stores it and the stop watch starts the next lap.		
Viewing the lap time	The stop watch and the lap time are reset.	Select a lap from 1 – 10	No function	View the next lap time.		
Display mode SPEED/0D0 (odometer)	No function	Next display mode	No function	No function		
Display mode SPEED/TR1 (trip master 1)	Displays of TR1, A1 and S1 are reset to 0.0.	Next display mode	No function	No function		
Display mode SPEED/TR2 (trip master 2)	Clears the values TR2 and A2.	Next display mode	Reduces value of <b>TR2</b> .	Reduces value of <b>TR2</b> .		

Display	Press the button # for 2–3 seconds.	Briefly press the button ₩.	Press the but- ton = for 2–3 seconds.	Briefly press the button —.	Wait 3 - 5 seconds.	Wait 10 - 12 seconds.
Adjusting <b>TR2</b> (trip master 2)	Increases value of TR2.	Increases value of TR2.	Reduces value of <b>TR2</b> .	Reduces value of <b>TR2</b> .		Stores and closes the Setup menu.
Display mode SPEED/A1 (average speed 1)	Displays of TR1, A1 and S1 are reset to 0.0.	Next display mode	No function	No function		
Display mode <b>SPEED/A2</b> (average speed 2)	No function	Next display mode	No function	No function		
Display mode SPEED/S1 (stop watch 1)	Displays of TR1, A1 and S1 are reset to 0.0.	Next display mode	No function	No function		
Display mode SPEED/S2 (stop watch 2)	The displays of <b>S2</b> and <b>A2</b> are set to 0,0.	Next display mode	No function	Starts or stops <b>\$2</b> .		

#### 7.24 Table of conditions and menu activation

Display	The motorcycle is stationary.	Menu can be acti- vated
Display mode SPEED/H (operating hours)	•	
Setup menu	•	
Adjusting the unit of measurement	•	
Adjusting the clock	•	
Display mode SPEED/LAP (lap time)		•
Viewing the lap time	•

Display mode SPEED/A2 (average speed 2)		•
Display mode SPEED/S1 (stop watch 1)		•
Display mode SPEED/S2 (stop watch 2)		•

#### 8.1 Advice on first use

#### Danger

**Danger of accidents** A rider who is not fit to ride poses a danger to him or herself and others.

- Do not operate the vehicle if you are not fit to ride due to alcohol, drugs or medication.
- Do not operate the vehicle if you are physically or mentally impaired.

#### Warning

**Risk of injury** Missing or poor protective clothing presents an increased safety risk.

- Wear appropriate protective clothing such as helmet, boots, gloves as well as trousers and a jacket with protectors on all rides.
- Always wear protective clothing that is in good condition and meets the legal regulations.

#### Warning

**Danger of crashing** Different tire tread patterns on the front and rear wheel impair the handling characteristic.

Different tire tread patterns can make the vehicle significantly more difficult to control.

- Make sure that only tires with a similar tire tread pattern are fitted to the front and rear wheel.

#### Warning

**Danger of accidents** An unadapted riding style impairs the handling characteristic.

- Adapt your riding speed to the road conditions and your riding ability.

#### Warning

**Danger of accidents** The vehicle is not designed to carry passengers.

Do not ride with a passenger.

#### Warning

Danger of accidents The brake system fails in the event of overheating.

If the foot brake lever is not released, the brake linings drag continuously.

- Take your foot off the foot brake lever when you are not braking.

#### Warning

**Danger of accidents** Total weight and axle loads influence the handling characteristic.

- Do not exceed the maximum permissible overall weight or the axle loads.

#### Warning

Risk of misappropriation People who act without authorization endanger themselves and others.

- Do not leave the vehicle unattended if the engine is running.
- Protect the vehicle against access by unauthorized persons.

#### Info

When using your motorcycle, remember that others may feel disturbed by excessive noise.

- Make sure that the pre-delivery inspection work has been carried out by an authorized KTM workshop.
  - ✓ You receive a delivery certificate and the Service and Warranty Booklet at vehicle handover.
- Before your first trip, read the entire Owner's Manual carefully.
- Get to know the controls.
- Adjust the basic position of the clutch lever. (\$\text{\text{\$\geq}}\$ p. 80)
- Adjust the free travel of the handbrake lever. ( p. 84)

- Adjust the basic position of the shift lever. ◄ (♀ p. 121)
- Get used to handling the motorcycle on a suitable surface before undertaking a more challenging trip.

#### Info

When off road, it is recommended that you are accompanied by another person on another vehicle so that you can help each other.

- Try also to ride as slowly as possible and in a standing position to get a better feeling for the motorcycle.
- Do not make any off-road trips that exceed your ability and experience.
- Hold the handlebar firmly with both hands and keep your feet on the footrests when riding.
- If you carry any luggage, make sure you fix it firmly as close as possible to the center of the vehicle and
  ensure even weight distribution between the front and rear wheels.

#### Info

Motorcycles react sensitively to any changes of weight distribution.

Do not exceed the maximum permissible weight and the maximum permissible axle loads.
 Guideline

Maximum permissible overall weight	280 kg (617 lb.)
Maximum permissible front axle load	110 kg (243 lb.)
Maximum permissible rear axle load	170 kg (375 lb.)

- Check the spoke tension. (

p. 100)

#### Info

The spoke tension must be checked after half an hour of operation.

- Run the engine in. (🕮 p. 35)

•

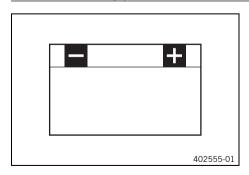

#### 8.2 Running in the engine

During the running-in phase, do not exceed the specified engine speed and engine performance.
 Guideline

Maximum engine speed		
During the first operating hour 7,000 rpm		
Maximum engine performance	•	
During the first 3 operating hours	≤ 75 %	

Avoid fully opening the throttle!

#### 8.3 Starting power of lithium-ion batteries at low temperatures

Lithium-ion batteries are far lighter than lead batteries, have a low self-discharge rate, and have more starting power at temperatures over  $15~^{\circ}\text{C}$  (60  $^{\circ}\text{F}$ ). At low temperatures, however, the starting power of lithium-ion batteries drops to below that of lead batteries.

Multiple starting attempts may be needed. Press the electric starter button for 5 seconds, and wait 30 seconds between attempts. The pauses are necessary so that the created heat can distribute through the lithium-ion battery and the battery is not damaged.

# **PREPARING FOR USE**

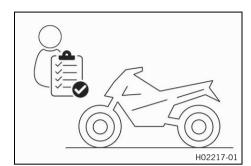

If the charged lithium-ion battery does not or only weakly turns over the electric starter when temperatures are below 15 °C (60 °F), then the battery is not faulty, but needs to be warmed up internally to increase its starting power (current output). The starting power increases as the battery warms up.

#### 9.1 Checks and maintenance measures when preparing for use

#### Info

Before every trip, check the condition of the vehicle and ensure that it is safe to operate. The vehicle must be in perfect technical condition when it is being operated.

- Check the electrical system.

- Check the rear brake linings. (🕮 p. 92)
- Check that the brake system is functioning properly.

- Check the chain, rear sprocket, engine sprocket and chain guide. (

  p. 76)
- Check the chain tension. (🕮 p. 75)
- Check the tire air pressure. ( p. 99)

#### Info

The spoke tension must be checked regularly as incorrect spoke tension will strongly impair riding safety.

- Clean the dust boots of the fork legs. ( p. 54)
- Bleed the fork legs. (
   p. 53)
- Check the air filter.
- Check the settings of all controls and ensure that they can be operated smoothly.
- Check all screws, nuts, and hose clips regularly for tightness.
- Check the fuel level.

#### 9.2 Starting the vehicle

#### **Danger**

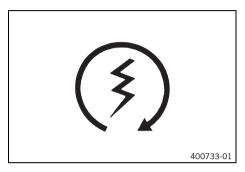

Danger of poisoning Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.

#### Note

**Engine damage** High revving speed with a cold engine negatively impacts the lifespan of the engine.

Always run the engine warm at a low speed.

- Take the motorcycle off side stand 1 and secure the side stand with rubber band 2.
- Shift gear to neutral.
- Turn the key in the ignition lock to the position ○.
- Turn the emergency OFF switch to the position ○.

#### Condition

Ambient temperature: < 20 °C (< 68 °F)

- Push the cold start button in all the way.
- Press the electric starter button ③.

#### Info

Press the electric starter button for a maximum of 5 seconds. Wait for 30 seconds before a further attempt at starting.

At temperatures below 15 °C (60 °F), several attempts at starting may be necessary to warm-up the lithium-ion battery and thereby increase the starting power. During the starting process, the malfunction indicator lamp lights up.

\_

#### 9.3 Starting off

#### Info

When you are riding, the side stand must be folded up and secured with the rubber band.

- Pull the clutch lever, engage 1st gear, release the clutch lever slowly and simultaneously open the throttle carefully.

#### 9.4 Shifting, riding

#### Warning

Danger of accidents 
If you change down at high engine speed, the rear wheel blocks and the engine races

Do not change into a low gear at high engine speed.

#### Info

If you hear unusual noises while riding, stop immediately, switch off the engine and contact an authorized KTM workshop.

First gear is used for starting off or for steep inclines.

- When conditions allow (incline, road situation, etc.), you can shift into a higher gear. To do so, release the
  throttle while simultaneously pulling the clutch lever, shift into the next gear, release the clutch, and open
  the throttle.
- After reaching maximum speed by fully opening the throttle grip, turn the throttle back so it is ¾ open. This
  will barely reduce the speed but fuel consumption will be considerably lower.
- Always open the throttle only as much as the engine can handle abrupt throttle opening increases fuel consumption.
- To shift down, brake and close the throttle at the same time.

- Pull the clutch lever and shift into a lower gear, release the clutch lever slowly, and open the throttle or shift
- Switch off the engine if you expect to be standing for a long time.
  - Guideline

≥ 2 min

- Avoid frequent and longer slipping of the clutch. As a result the engine oil, engine and cooling system heat up.
- Ride with a lower engine speed instead of with a high engine speed and a slipping clutch.

#### 9.5 Applying the brakes

#### Warning

**Danger of accidents** Excessively forceful application of the brakes blocks the wheels.

Adjust application of the brakes to the respective riding situation and riding surface conditions.

#### Warning

**Danger of accidents** A spongy pressure point on the front or rear brake reduces braking efficiency.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

#### Warning

**Danger of accidents** Moisture and dirt impair the brake system.

- Brake carefully several times to dry out and remove dirt from the brake linings and the brake discs.
- On sandy, wet or slippery surfaces, use the rear brake.
- Braking should always be completed before you go into a bend. Change down to a lower gear appropriate to your road speed.
- On long downhill stretches, use the braking effect of the engine. Change down one or two gears, but do not
  overstress the engine. In this way, you have to apply the brakes far less frequently and the brake system does
  not overheat.

#### 9.6 Stopping, parking

#### Warning

**Risk of misappropriation** People who act without authorization endanger themselves and others.

- Do not leave the vehicle unattended if the engine is running.
- Protect the vehicle against access by unauthorized persons.

#### Warning

**Danger of burns** Some vehicle components become very hot when the vehicle is operated.

- Do not touch any parts such as the exhaust system, radiator, engine, shock absorber, or brake system before the vehicle parts have cooled down.
- Let the vehicle parts cool down before you perform any work on the vehicle.

#### Note

Material damage The vehicle may be damaged by incorrect procedure when parking.

Significant damage may be caused if the vehicle rolls away or falls over.

The components for parking the vehicle are designed only for the weight of the vehicle.

- Ensure that nobody sits on the vehicle when the vehicle is parked on a stand.

#### Note

**Fire hazard** Hot vehicle components pose a fire hazard and explosion risk.

- Do not park the vehicle near to materials which are highly flammable or explosive.
- Allow the vehicle to cool down before covering it.

Park the vehicle on a firm and level surface.

- Apply the brakes on the motorcycle.
- Shift gear to neutral.
- Turn the key in the ignition lock to the position ⊗ while the engine is idling.

#### Info

If the engine is switched off with the emergency OFF switch and the ignition remains switched on at the ignition lock, power continues to flow to most power consumers. This discharges the battery. You should therefore always switch off the engine with the ignition lock - the emergency OFF switch is intended for emergencies only.

Park the motorcycle on firm ground.

#### 9.7 **Transporting**

#### Note

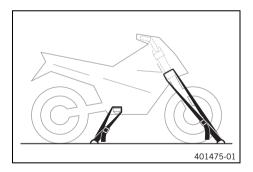

Danger of damage The parked vehicle can roll away or fall over.

Park the vehicle on a firm and level surface.

#### Note

Fire hazard Hot vehicle components pose a fire hazard and explosion risk.

- Do not park the vehicle near to materials which are highly flammable or explosive.
- Allow the vehicle to cool down before covering it.

- Switch off the engine.
- Use tension belts or other suitable devices to secure the motorcycle against falling over or rolling away.

#### 9.8 Refueling

#### **Danger**

Fire hazard Fuel is highly flammable.

The fuel in the fuel tank expands when warm and can escape if overfilled.

- Do not refuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

#### Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.

#### Note

Material damage Inadequate fuel quality causes the fuel filter to quickly become clogged.

In some countries and regions, the available fuel quality and cleanliness may not be sufficient. This will result in problems with the fuel system.

Refuel only with clean fuel that meets the specified standards. (Your authorized KTM workshop will be glad to help.)

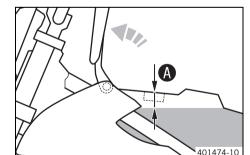

**Environmental hazard** Improper handling of fuel is a danger to the environment.

Do not allow fuel to enter the groundwater, the soil, or the sewage system.

#### Preparatory work

- Switch off the engine.
- Fold the seat up. (
  p. 64)
- Open the filler cap. (
  p. 17)

#### Main work

Fill the fuel tank with fuel up to measurement **A**. Guideline

Measurement of (A)		30 mm (1.18 in)		
Total fuel tank capacity, approx.	5 I (1.3 U	IS gal)	Super unleaded (ROZ 95/RON 95/PON 91) (🙉 p. 145)	

#### **Finishing work**

- Close the filler cap. (
  p. 18)
- Lock the seat. (
  p. 64)

#### 10.1 Additional information

Any further work that results from the required work or from the recommended work must be ordered separately and can be invoiced separately.

Different service intervals may apply in your country, depending on the local operating conditions. Individual service intervals and scopes may change in the course of technical developments. The most up-to-date service schedule can always be found on KTM Dealer.net. Your authorized KTM dealer will be happy to advise you.

#### 10.2 Required work

Every 8 Every 40 op				ours
Every 40 operat		_	Juis	
Once after 1 operating		Juis		
Read out the fault memory using the KTM diagnostics tool.	0	•	•	•
Check that the electrical system is functioning properly.	0	•	•	•
Check and charge the battery.		•	•	•
Change the engine oil and oil filter, clean the oil screen. ♣ (의 p. 123)	0	•	•	•
Check the front brake linings. (  p. 87)		•	•	•
Check the rear brake linings. ( p. 92)		•	•	•
Check the brake discs. ( p. 84)		•	•	•
Check the brake lines for damage and leakage.		•	•	•
Change the foot brake cylinder seals.			•	•
Check the rear brake fluid level. (🕮 p. 90)		•	•	•
Check the free travel of the foot brake lever. ( p. 89)		•	•	•
Check the frame. <b>◄</b> (♠ p. 79)		•	•	•

Check the transmission and shift mechanism. Check the oil pressure regulator valve. Change the suction pump. Check the force pump and lubrication system. Check the timing assembly. Change the timing chain. Change all engine bearings. Change the freewheel.)			•	

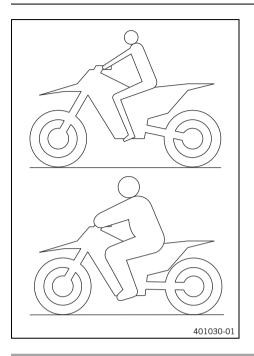

- o One-time interval
- Periodic interval

#### 11.1 Checking the basic chassis setting with the rider's weight

#### Info

When adjusting the basic chassis setting, first adjust the shock absorber and then the fork.

- For optimal motorcycle riding characteristics and to avoid damage to forks, shock absorbers, swingarm and frame, the basic settings of the suspension components must match the rider's weight.
- As delivered, KTM offroad motorcycles are adjusted for an average rider's weight (with full protective clothing).
   Guideline

Standard rider weight	75 85 kg (165
	187 lb.)

- If the rider's weight is above or below this range, the basic setting of the suspension components must be adjusted accordingly.
- Small weight differences can be compensated by adjusting the spring preload, but in the case of large weight differences, the springs must be replaced.

## 11.2 Compression damping of the shock absorber

The compression damping of the shock absorber is divided into two ranges: high-speed and low-speed. High-speed and low-speed refer to the compression speed of the rear wheel suspension and not to the vehicle speed.

The high-speed setting, for example, has an effect on the landing after a jump: the rear wheel suspension compresses quickly.

The low-speed setting, for example, has an effect when riding over long ground swells: the rear wheel suspension compresses slowly.

These two ranges can be adjusted separately, although the transition between high-speed and low-speed is gradual. Thus, changes in the high-speed range affect the compression damping in the low-speed range and vice versa.

#### 11.3 Adjusting the low-speed compression damping of the shock absorber

#### Caution

**Risk of injury** Parts of the shock absorber will move around if the shock absorber is detached incorrectly. The shock absorber is filled with highly compressed nitrogen.

- Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

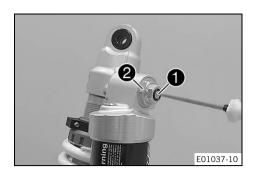

#### Info

The low-speed setting can be seen during the slow to normal compression of the shock absorber.

#### Preparatory work

- Fold the seat up. (@ p. 64)

#### Main work

 Turn adjusting screw clockwise with a screwdriver as far as the last perceptible click.

#### Info

Do not loosen fitting **2**!

 Turn counterclockwise by the number of clicks corresponding to the shock absorber type.

#### Guideline

	Compression damping, low-speed			
Comfort		22 clicks		
	Standard	18 clicks		
	Sport	15 clicks		

#### Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

#### **Finishing work**

- Install the shock absorber. 🔌 🕮 p. 63)
- Lock the seat. (
   p. 64)
- Remove the motorcycle from the lift stand. (🕮 p. 53)

#### 11.4 Adjusting the high-speed compression damping of the shock absorber

#### Caution

**Risk of injury** Parts of the shock absorber will move around if the shock absorber is detached incorrectly. The shock absorber is filled with highly compressed nitrogen.

- Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

#### Info

The high-speed setting can be seen during the fast compression of the shock absorber.

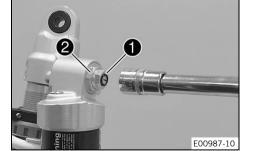

#### **Preparatory work**

- Raise the motorcycle with a lift stand. (

  □ p. 53)
- Fold the seat up. (🕮 p. 64)

#### Main work

Turn adjusting screw all the way clockwise with a socket wrench.

#### Info

Do not loosen fitting 2!

 Turn counterclockwise by the number of turns corresponding to the shock absorber type.

#### Guideline

Compression damping, high-speed		
Comfort 2 turns		
Standard	2 turns	
Sport	1.5 turns	

#### Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

#### **Finishing work**

- Install the shock absorber. ◀ (學 p. 63)
- Lock the seat. (🕮 p. 64)
- Remove the motorcycle from the lift stand. (
   p. 53)

## 11.5 Adjusting the rebound damping of the shock absorber

#### Caution

**Risk of injury** Parts of the shock absorber will move around if the shock absorber is detached incorrectly. The shock absorber is filled with highly compressed nitrogen.

- Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

- Turn adjusting screw 1 clockwise up to the last perceptible click.
- Turn counterclockwise by the number of clicks corresponding to the shock absorber type.

#### Guideline

Rebound damping	
Comfort	22 clicks
Standard	15 clicks
Sport	12 clicks

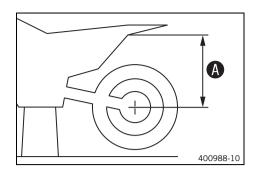

#### Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

#### 11.6 Measuring rear wheel sag unloaded

#### Preparatory work

- Raise the motorcycle with a lift stand. (
p. 53)

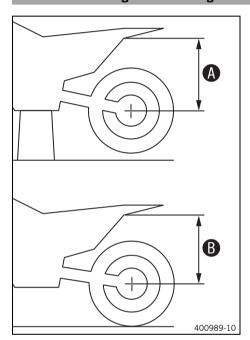

#### Main work

- Measure the distance as vertical as possible between the rear axle and a fixed point, for example, a mark on the rear
- Note down the value as dimension **A**.

#### **Finishing work**

Remove the motorcycle from the lift stand. (
p. 53)

#### 11.7 Checking the static sag of the shock absorber

- Measure distance A of rear wheel unloaded. (
  p. 46)
- Hold the motorcycle upright with the aid of an assistant.
- Measure the distance between the rear axle and the fixed point again.
- Note down the value as dimension **B**.

#### Info

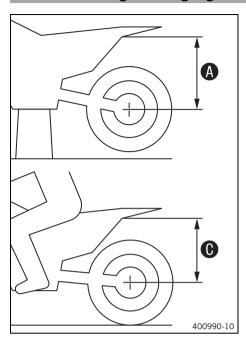

The static sag is the difference between measurements (A) and (B).

Check the static sag.

Static sag 25 mm (0.98 in)

- If the static sag is less or more than the specified value:
  - Adjust the spring preload of the shock absorber. 🐴 (🕮 p. 48)

#### 11.8 Checking the riding sag of the shock absorber

- Measure distance (A) of rear wheel unloaded. (🕮 p. 46)
- With another person holding the motorcycle, the rider, wearing full protective clothing, sits on the seat in a normal sitting position (feet on footrests) and bounces up and down a few times.
  - ✓ The rear wheel suspension levels out.
- Another person now measures the distance between the rear axle and the fixed point.
- Note down the value as dimension **()**.

#### Info

The riding sag is the difference between measurements  $\bf A$  and  $\bf C$ .

Check the riding sag.

Riding sag 95 mm (3.74 in)

- » If the riding sag differs from the specified measurement:
  - Adjust the riding sag. 🔌 (🕮 p. 49)

## 11.9 Adjusting the spring preload of the shock absorber 🔌

#### Caution

**Risk of injury** Parts of the shock absorber will move around if the shock absorber is detached incorrectly. The shock absorber is filled with highly compressed nitrogen.

- Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

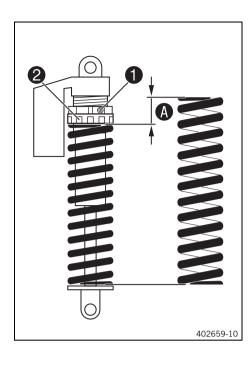

#### Info

Before changing the spring preload, make a note of the present setting, e.g., by measuring the spring length.

#### Preparatory work

- Raise the motorcycle with a lift stand. (

  □ p. 53)
- Fold the seat up. (🕮 p. 64)
- Remove the shock absorber. ◄ (♥ p. 63)
- After removing the shock absorber, clean it thoroughly.

#### Main work

- Loosen screw 1.
- Turn adjusting ring 2 until the spring is no longer under tension.

Holding wrench (90129051000)

- Measure the overall spring length while the spring is not under tension.
- Tighten the spring by turning adjusting ring 2 to measurement A.

Guideline

#### Info

Depending on the static sag and/or the riding sag, it may be necessary to increase or decrease the spring preload.

Tighten screw 1.

#### Guideline

Screw, shock	M5	5 Nm (3.7 lbf ft)
absorber adjusting		
ring		

#### **Finishing work**

- Lock the seat. (🕮 p. 64)
- Remove the motorcycle from the lift stand. ( p. 53)

#### 11.10 Adjusting the riding sag 🔌

#### **Preparatory work**

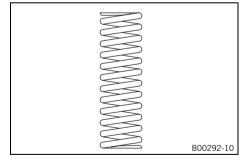

- Raise the motorcycle with a lift stand. (
  p. 53)
- Fold the seat up. (🕮 p. 64)
- Remove the shock absorber. **◄** (🕮 p. 63)
- After removing the shock absorber, clean it thoroughly.

#### Main work

- Choose and mount a suitable spring.

#### Guideline

Spring rate	
Weight of rider: 65 75 kg (143 165 lb.)	66 N/mm (377 lb/in)
Weight of rider: 75 85 kg (165 187 lb.)	68 N/mm (388 lb/in)
Weight of rider: 85 95 kg (187 209 lb.)	69 N/mm (394 lb/in)

# i

#### Info

The spring rate is shown on the outside of the spring. Smaller weight differences can be compensated by changing the spring preload.

#### **Finishing work**

- Remove the motorcycle from the lift stand. (

  p. 53)
- Check the static sag of the shock absorber. (

  □ p. 47)
- Check the riding sag of the shock absorber. ( p. 48)

#### 11.11 Checking the basic setting of the fork

#### Info

For various reasons, no exact riding sag can be determined for the fork.

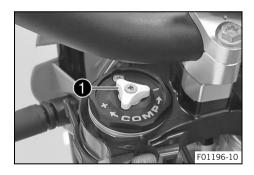

- As with the shock absorber, smaller differences in the rider's weight can be compensated by the spring preload.
- However, if the fork is often overloaded (hard end stop on compression), harder springs must be fit to avoid damage to the fork and frame.

## 11.12 Adjusting the compression damping of the fork

#### Info

The hydraulic compression damping determines the fork suspension behavior.

Turn white adjusting screw 1 clockwise as far as it will go.

#### Info

Adjusting screw is located at the upper end of the left fork leg.

The compression damping is located in left fork leg **COMP** (white adjusting screw). The rebound damping is located in right fork leg **REB** (red adjusting screw)

 Turn counterclockwise by the number of clicks corresponding to the fork type.

#### Guideline

Compression damping	
Comfort	18 clicks
Standard	15 clicks
Sport	12 clicks

#### Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

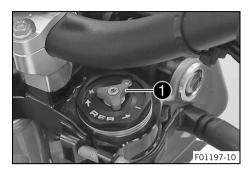

•

#### 11.13 Adjusting the rebound damping of the fork

#### Info

The hydraulic rebound damping determines the fork suspension behavior.

- Turn red adjusting screw 1 clockwise as far as it will go.

#### Info

Adjusting screw is located at the upper end of the right fork leg.

The rebound damping is located in right fork leg **REB** (red adjusting screw). The compression damping is located in left fork leg **COMP** (white adjusting screw).

 Turn counterclockwise by the number of clicks corresponding to the fork type.

#### Guideline

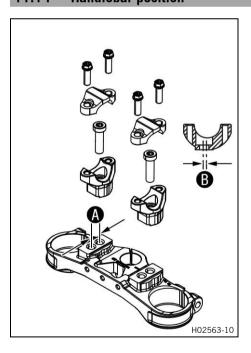

Rebound damping	
Comfort	23 clicks
Standard	20 clicks
Sport	15 clicks

#### Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

# 11.14 Handlebar position

On the upper triple clamp, there are two holes at a distance of  $oldsymbol{\mathbb{A}}$  to each other.

Hole distance (A) 15 mm (0.59 in)

The holes on the handlebar supports are placed at a distance of **B** from the center.

Hole distance 3.5 mm (0.138 in)

The handlebar supports can be mounted in four different positions.

#### 11.15 Adjusting the handlebar position 🔏

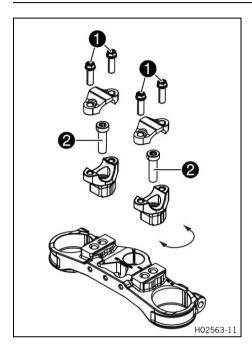

#### Warning

Danger of accidents A repaired handlebar poses a safety risk.

If the handlebar is bent or straightened, the material becomes fatigued. The handlebar may break as a result.

Change the handlebar if the handlebar is damaged or bent.

 Remove screws 1. Remove the handlebar clamps. Take off the handlebar and lay it to one side.

#### Info

Cover the components to protect them against damage. Do not bend the cables and lines.

- Remove screws 2. Take off the handlebar supports.
- Move the handlebar supports into the desired position. Mount and tighten screws 2.

Guideline

Screw, handle-	M10	40 Nm (29.5 lbf ft)
bar support		Loctite®243™

#### Info

Position the left and right handlebar supports evenly.

Position the handlebar.

#### Info

Make sure cables and wiring are positioned correctly.

- Position the handlebar clamps. Mount screws **1** and tighten evenly.

Guideline

Screw, handlebar	M8	20 Nm (14.8 lbf ft)
clamp		

#### Info

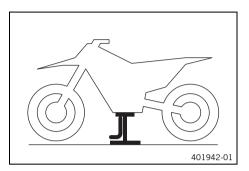

Make sure the gap width is even.

#### 12.1 Raising the motorcycle with a lift stand

#### Note

Danger of damage The parked vehicle can roll away or fall over.

- Park the vehicle on a firm and level surface.

- Raise the motorcycle at the frame underneath the engine.

Lift stand (78929955100)

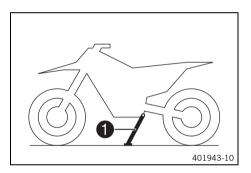

- ✓ Neither wheel is in contact with the ground.
- Secure the motorcycle against falling over.

#### 12.2 Removing the motorcycle from the lift stand

#### Note

Danger of damage The parked vehicle can roll away or fall over.

Park the vehicle on a firm and level surface.

- Remove the motorcycle from the lift stand.
- Remove the lift stand.
- To park the motorcycle, fold side stand **1** down to the ground with your foot and rest the motorcycle on it.

#### Info

While riding, the side stand must be folded up and secured with the rubber band.

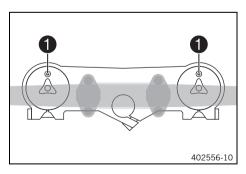

## 12.3 Bleeding the fork legs

#### Preparatory work

- Raise the motorcycle with a lift stand. (♥ p. 53)

#### Main work

- Release bleeder screws 1.
  - ✓ Any excess pressure escapes from the interior of the fork.
- Tighten the bleeder screws.

#### **Finishing work**

- Remove the motorcycle from the lift stand. (@ p. 53)

#### 12.4 Cleaning the dust boots of the fork legs

#### Preparatory work

- Raise the motorcycle with a lift stand. (

  p. 53)

#### Main work

- Push dust boots 1 of both fork legs downward.

#### Info

The dust boots remove dust and coarse dirt particles from the inside fork tubes. Over time, dirt can accumulate behind the dust boots. If this dirt is not removed, the oil seals behind can start to leak.

#### Warning

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.
- Clean and oil the dust boots and inner fork tubes of both fork legs.

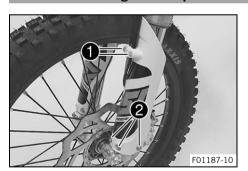

Universal oil spray (🕮 p. 147)

- Press the dust boots back into their installation position.
- Remove excess oil.

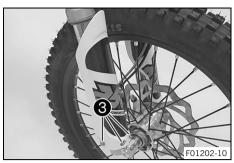

#### Finishing work

- Remove the motorcycle from the lift stand. (
   p. 53)

12.5 Removing the fork protector

- Remove screws 
   1. Take off the clamp.
- Remove screws 2 on the left fork leg. Take off the fork protector.

Remove screws 3 on the right fork leg. Take off the fork protector.

Installing the fork protector

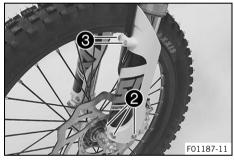

12.6

Position the fork protection on the right fork leg. Mount and tighten screws 1.

Guideline

Remaining screws,	M6	10 Nm (7.4 lbf ft)
chassis		

 Position the fork protection on the left fork leg. Mount and tighten screws 2.

Guideline

Remaining screws,	M6	10 Nm (7.4 lbf ft)
chassis		

Position the brake line, wiring harness, and clamp. Mount and tighten screws 3.

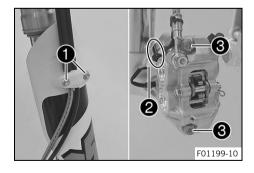

12.7 Removing the fork legs 🔌

#### **Preparatory work**

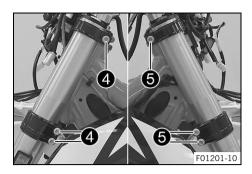

- Remove the headlight mask with the headlight. (🕮 p. 106)
- Raise the motorcycle with a lift stand. (♥ p. 53)

#### Main work

- Remove screws 1 and take off the clamp.
- Remove the cable tie(s) and detach plug-in connector 2.
- Remove screws 3 with the spacers and take off the brake caliper.
- Allow the brake caliper and brake line to hang loosely to the side.

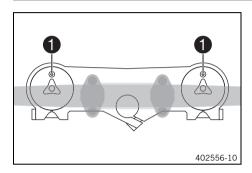

# 12 SERVICE WORK ON THE CHASSIS

- Loosen screws 4. Take out the left fork leg.
- Loosen screws **5**. Take out the right fork leg.

#### 12.8 Installing the fork legs 🔌

# Main work - Position

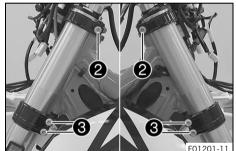

Position the fork legs.

✓ Bleeder screws are positioned toward the front.

#### Info

Grooves are milled into the side of the upper end of the fork legs. The second milled groove (from the top) must be flush with the upper edge of the upper triple clamp.

- Tighten screws 2.

#### Guideline

Screw, top triple	M8	22 Nm (16.2 lbf ft)
clamp		

- Tighten screws 3.

#### Guideline

Screw, bottom triple	M8	18 Nm (13.3 lbf ft)
clamp		

 Position the brake caliper. Mount and tighten screws 4 with the spacers.

#### Guideline

Screw, front	M8	25 Nm (18.4 lbf ft)
brake caliper		Loctite®243™

- Connect plug-in connector 6 and mount the cable tie(s).
- Position the brake line, wiring harness, and clamp. Mount and tighten screws 6.

#### **Finishing work**

- Install the front wheel. 4 (
   p. 95)
- Install the headlight mask with the headlight. (
   p. 107)
- Check the headlight setting. (@ p. 109)

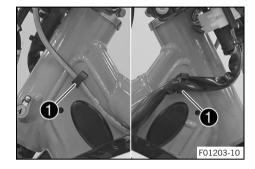

#### 12.9 Removing the lower triple clamp &

#### Preparatory work

- Remove the headlight mask with the headlight. (
  p. 106)
- Raise the motorcycle with a lift stand. (\$\mathbb{Q}\$ p. 53)
- Remove the front wheel. 4 (# p. 95)
- Remove front fender. ( p. 61)

#### Main work

Open cable holder 1 in front of the right and right radiator and detach the wiring harness.

- Pull the fuel tank breather hose out of the steering head screw.
- Remove screw 2.
- Remove screw 3.
- Take off the upper triple clamp with the handlebar and set it aside.

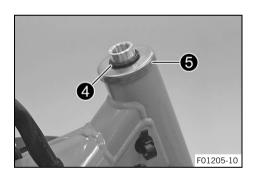

#### Info

Cover the components to protect them against damage. Do not kink the cables and lines.

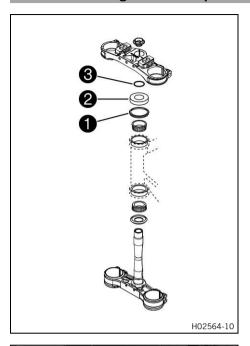

F01204-10

- Remove O-ring 4 and protective ring 5.
- Take off the lower triple clamp with the steering stem.
- Remove the upper steering head bearing.

#### 12.10 Installing the lower triple clamp &

#### Main work

 Clean the bearing and sealing elements, check for damage, and grease.

High viscosity grease (
p. 146)

- Insert the lower triple clamp with the steering stem. Mount the upper steering head bearing.
- Check whether upper steering head seal is correctly positioned.
- Slide on protective ring 2 and 0-ring 3.

- Position the upper triple clamp with the handlebar.
- Mount screw 4 but do not tighten yet.
- Position the clutch line and wiring harness.

- Position the fork legs.
  - ✓ Bleeder screws **⑤** are positioned toward the front.

#### Info

The rebound damping is located in right fork leg **REB** (red adjusting screw). The compression damping is located in left fork leg **COM** (white adjusting screw). Grooves are milled into the side of the upper end of the fork legs. The second milled groove (from the top) must be flush with the upper edge of the upper triple clamp.

- Tighten screws **6**.

Guideline

Screw, bottom triple	M8	18 Nm (13.3 lbf ft)
clamp		

- Tighten screw 4.

Guideline

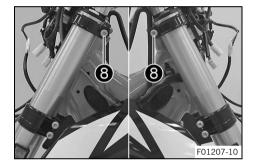

Screw, top steering	M20x1.5	12 Nm (8.9 lbf ft)
head		

Mount and tighten screw 7.

Guideline

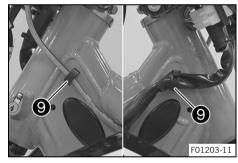

Screw, top	M8	17 Nm (12.5 lbf ft)
steering stem		Loctite®243™

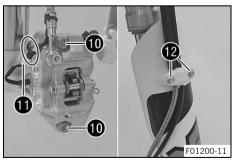

- Using a plastic hammer, tap lightly on the upper triple clamp to avoid stresses.
- Tighten screws 8.

Guideline

Screw, top triple	M8	22 Nm (16.2 lbf ft)
clamp		

- Insert the fuel tank breather hose into the steering head screw.

 Position the brake caliper. Mount and tighten screws 10 with the spacers.

Guideline

Screw, front	M8	25 Nm (18.4 lbf ft)
brake caliper		Loctite®243™

- Connect plug-in connector 11 and mount the cable tie(s).
- Position the brake line, wiring harness, and clamp. Mount and tighten screws 2.

#### **Finishing work**

- Install the headlight mask with the headlight. (🕮 p. 107)

- Check that the wiring harness, throttle cables, and brake and clutch lines can move freely and are routed correctly.
- Check the steering head bearing play. ( p. 60)
- Remove the motorcycle from the lift stand. (🕮 p. 53)
- Check the headlight setting. (
   p. 109)

#### 12.11 Checking the steering head bearing play

#### Warning

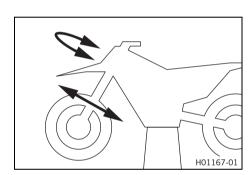

**Danger of accidents** Incorrect steering head bearing play impairs the handling characteristic and damages components.

 Correct incorrect steering head bearing play immediately. (Your authorized KTM workshop will be glad to help.)

#### Info

If the bike is ridden with play in the steering head bearing, the bearing and the bearing seats in the frame can become damaged over time.

#### Preparatory work

#### Main worl

 Move the handlebar to the straight-ahead position. Move the fork legs to and fro in the direction of travel.

No play should be noticeable in the steering head bearing.

- » If there is noticeable play present:
  - Adjust the play of the steering head bearing. 
     (♠ p. 61)
- Move the handlebar to and fro over the entire steering range.

The handlebar must be able to move easily over the entire steering range. No resting locations should be noticeable.

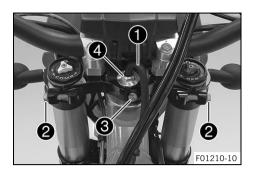

- » If click positions are noticeable:
  - Adjust the play of the steering head bearing.
     (ID) p. 61)
  - Check the steering head bearing and replace if required.

#### Finishing work

Remove the motorcycle from the lift stand. (
 p. 53)

•

#### 12.12 Adjusting the play of the steering head bearing &

#### Preparatory work

- Raise the motorcycle with a lift stand. (
p. 53)

#### Main work

- Pull out hose **1** from the front steering head screw.
  - Loosen screws 2. Remove screw 3.
- Loosen and retighten screw 4.

#### Guideline

Screw, top steering	M20x1.5	12 Nm (8.9 lbf ft)
head		

- Using a plastic hammer, tap lightly on the upper triple clamp to avoid strains.
- Tighten screws 2.

#### Guideline

Screw, top triple	M8	22 Nm (16.2 lbf ft)
clamp		

Mount and tighten screw 3.

#### Guideline

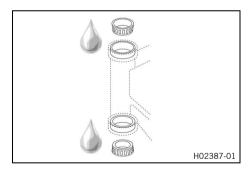

Screw, top	M8	17 Nm (12.5 lbf ft)
steering stem		Loctite®243™

Insert hose 1 into the steering head screw.

#### **Finishing work**

- Check the steering head bearing play. (🗐 p. 60)

#### 12.13 Greasing the steering head bearing 4

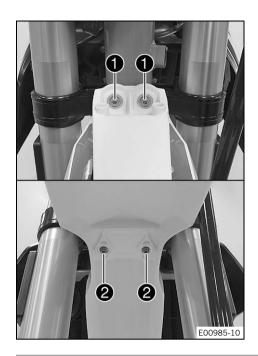

- Remove the lower triple clamp. ◀ (學 p. 57)

#### 12.14 Removing front fender

#### Preparatory work

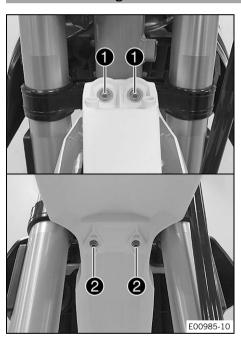

- Remove the headlight mask with the headlight. (🕮 p. 106)

#### Main work

- Remove screws 1.
- Remove screws 2.
- Take off the front fender.

#### 12.15 Installing front fender

#### Main work

Position front fender. Mount and tighten screws ①.
 Guideline

Remaining screws,	M6	10 Nm (7.4 lbf ft)
chassis		

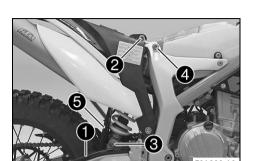

- Mount and tighten screws **2**. Guideline

Remaining screws,	M6	10 Nm (7.4 lbf ft)
chassis		

#### Finishing work

- Install the headlight mask with the headlight. (록 p. 107)
- Check the headlight setting. (₽ p. 109)

#### 12.16 Removing the shock absorber 🔦

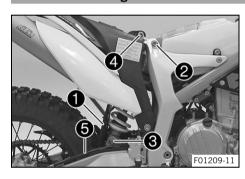

#### Preparatory work

- Raise the motorcycle with a lift stand. (
  p. 53)
- Fold the seat up. (🕮 p. 64)

#### Main work

- Detach brake line 1.
- Remove screw 2.
- Remove screw 3 and lower the rear wheel with the swingarm as far as possible without blocking the rear wheel. Secure the rear wheel in this position.
- Remove screw 4.
- Push splash protector **5** to the side and remove the shock absorber.

#### 12.17 Installing the shock absorber 🔦

#### Main work

Push splash protector 1 to the side and position the shock absorber. Mount and tighten screw 2.

#### Guideline

Screw, top	M12	80 Nm (59 lbf ft)
shock absorber		Loctite®2701™

- Mount and tighten screw 3.

#### Guideline

Screw, bottom	M12	80 Nm (59 lbf ft)
shock absorber		Loctite®2701™

#### Info

The heim joint for the shock absorber at the swingarm is Teflon-coated. It must not be greased with grease, nor with any other lubricants. Lubricants dissolve the Teflon coating, thereby drastically reducing the service life

Mount and tighten screw 4.

#### Guideline

Screw, upper	M10	45 Nm (33.2 lbf ft)
subframe		Loctite®243™

- Attach brake line 6 .

#### **Finishing work**

- Lock the seat. (
  p. 64)
- Remove the motorcycle from the lift stand. (🕮 p. 53)

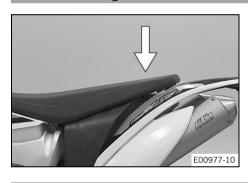

•

#### 12.18 Folding the seat up

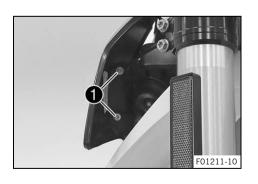

- Press release lever 1.
- Lift the seat and fold it up.

#### 12.19 Locking the seat

- Fold down the seat and push it down.
  - ✓ The seat engages with an audible click.
- Check that the seat is correctly locked.

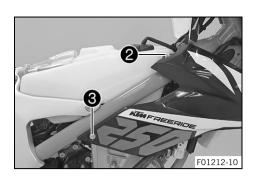

#### 12.20 Taking off the spoiler

#### **Preparatory work**

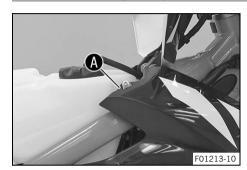

Fold the seat up. (🕮 p. 64)

Main work Remove screws 1.

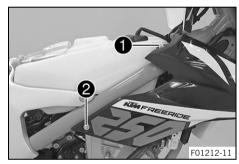

- Remove screw 2.
- Remove screw 3.
- Take off the spoiler.
- Repeat the operation on the opposite side.

#### 12.21 Mounting the spoiler

Position the spoiler and hook it in at area **A**.

Mount and tighten screw 1. Guideline

Repeat the operation on the opposite side.

#### Finishing work

## 12.22 Removing the air filter housing 4

#### Note

**Engine damage** Unfiltered intake air has a negative effect on the service life of the engine.

Dust and dirt will enter the engine without an air filter.

Never start to use the vehicle without an air filter.

# E00998-10

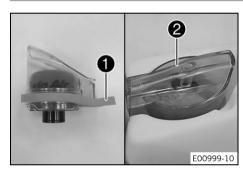

#### **Preparatory work**

Fold the seat up. (
 p. 64)

#### Main work

Pull off air filter housing 1 and pre-filter 2 toward the top.

#### Main worl

Position pre-filter 1 on the air filter housing.

#### Note

**Engine failure** If the pre-filter is mounted incorrectly or not mounted at all, the air-fuel mixture will change. This has a negative effect on the service life of the engine.

- Make sure the pre-filter is seated correctly.
- Attach air filter housing 2 to the inlet flange together with the mounted pre-filter.

#### Info

If the air filter housing is not mounted correctly, dust and dirt may enter the engine and cause damage.

#### **Finishing work**

Lock the seat. (
 p. 64)

#### 12.24 Removing the air filter 🔦

#### Note

**Engine damage** Unfiltered intake air has a negative effect on the service life of the engine.

Dust and dirt will enter the engine without an air filter.

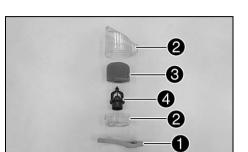

Never start to use the vehicle without an air filter.

#### Warning

**Environmental hazard** Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

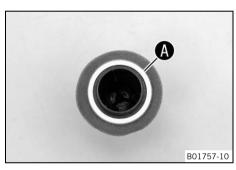

#### **Preparatory work**

- Fold the seat up. (
  p. 64)
- Remove the air filter housing. 🌂 (🕮 p. 66)

#### Main work

- Take off pre-filter 1.
- Press the air filter housing 2 together and open in counterclockwise direction.
- Remove the air filter 3 with the air filter support 4.
- Take off air filter 3 from air filter support 4.

## 12.25 Installing the air filter 🔌

#### Main work

E01000-10

- Mount the clean air filter onto the air filter support.
  - Apply grease to the air filter around area  $\mathbf{A}$ .

Long-life grease (🕮 p. 146)

Insert both parts together and close air filter housing 
 turning clockwise.

#### Info

If the air filter is not mounted correctly, dust and dirt may enter the engine and cause damage.

#### **Finishing work**

- Install the air filter housing. ◀ (♥ p. 66)
- Lock the seat. (

  p. 64)

#### 12.26 Cleaning the air filter and air filter housing &

#### Warning

**Environmental hazard** Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

#### Info

Do not clean the air filter with fuel or petroleum since these substances attack the foam.

#### **Preparatory work**

- Fold the seat up. (
   p. 64)
- Remove the air filter housing. 🔌 (🕮 p. 66)
- Remove the air filter. ◀ (學 p. 66)

#### Main work

 Wash the air filter thoroughly in special cleaning liquid and allow it to dry properly.

Air filter cleaner (
p. 146)

#### Info

Only press the air filter to dry it, never wring it out.

- Oil the dry air filter with a high quality filter oil.

Oil for foam air filter (
p. 146)

- · Clean the air filter housing.
- Check the intake flange for damage and ensure it is firmly seated.

#### **Finishing work**

- Install the air filter housing. ◀ (🕮 p. 66)
- Lock the seat. (
   p. 64)

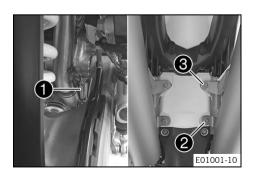

12.27 Removing the main silencer

#### Warning

**Danger of burns** The exhaust system gets very hot when the vehicle is driven.

Allow the exhaust system to cool down before performing any work on the vehicle.

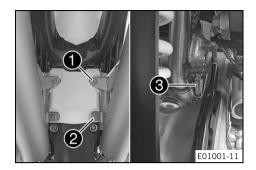

Detach spring 1.

Spring hook (50305017000)

- Remove screw 2.
- Remove screw 3 and take off the main silencer.
- Repeat these steps on the opposite side.

•

#### 12.28 Installing the main silencer

- Position the main silencer.
- Mount screw 1 but do not tighten yet.
   Guideline

Screw, main silencer M8x25 25 Nm (18.4 lbf ft)

- Mount screw 2 but do not tighten yet.

Guideline

Screw, main silencer M8x20 25 Nm (18.4 lbf ft)

Attach spring 3.

Spring hook (50305017000)

- Tighten screw 🕕.

Guideline

Screw, main silencer M8x25 25 Nm (18.4 lbf ft)

– Tighten screw 2.

Guideline

Screw, main silencer M8x20 25 Nm (18.4 lbf ft)

- Repeat these steps on the opposite side.

## 12.29 Changing the glass fiber yarn filling of the main silencer 🔌

#### Warning

**Danger of burns** The exhaust system gets very hot when the vehicle is driven.

- Allow the exhaust system to cool down before performing any work on the vehicle.

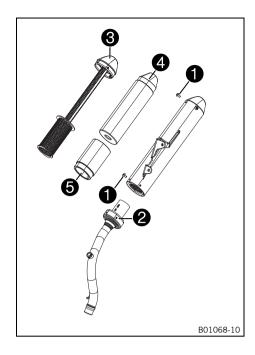

#### Info

Over a period, the fibers of the glass fiber yarn vanish into the air, and the silencer "burns out". Not only is the noise level higher, the performance characteristic changes. The operations are the same for the left and right sides.

#### **Preparatory work**

- Remove the main silencer. ( p. 68)

#### Main work

- Remove screws 1.
- Take off connecting cap 2.
- Remove the silencer cap 3 together with the perforated pipe and glass fiber yarn fillings 4 and 5.
- Clean the parts that need to be reinstalled and check for damage.
- Mount the new glass fiber yarn fillings 4 and 5 on the perforated pipe.
- Position the silencer cap with the perforated pipe 3 in the outer tube.
- Position the connection cap 2.
- Mount and tighten screws 1.
   Guideline

Screws on the main	M5	7 Nm (5.2 lbf ft)
silencer		

#### **Finishing work**

#### 12.30 Removing the fuel tank &

#### Danger

**Fire hazard** Fuel is highly flammable.

The fuel in the fuel tank expands when warm and can escape if overfilled.

- Do not refuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

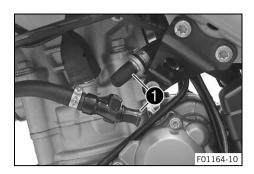

#### Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.
- Keep fuels correctly in a suitable canister, and out of the reach of children.

#### Preparatory work

- Fold the seat up. (🕮 p. 64)

# Main work

 Thoroughly clean the plug-in connection of the fuel line using compressed air.

# Info

Under no circumstances should dirt enter into the fuel line. Dirt in the fuel line clogs the injection valve!

- Disconnect the plug-in connection of the fuel line.

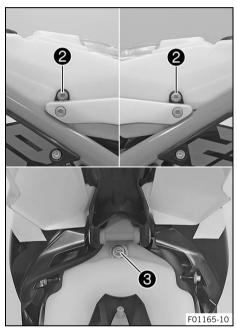

# Info

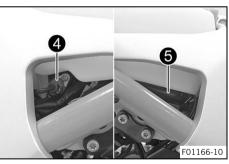

Remaining fuel may flow out of the fuel hose.

- Mount wash cap set 1.

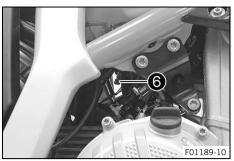

Wash cap set (81212016100)

- Remove the hose from the fuel tank breather.
- Remove screws 2 on both sides.
- Remove screw 3.

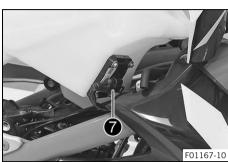

- Unplug connector 4.
- Pull off engine breather hose **5**.

- Release hose clamp **6**.
- Detach the intake flange from the throttle valve body.

- Pull up the fuel tank slightly and disconnect the connector for the fuel pump.
- Remove the fuel tank from above.

# Danger

Fire hazard Fuel is highly flammable.

The fuel in the fuel tank expands when warm and can escape if overfilled.

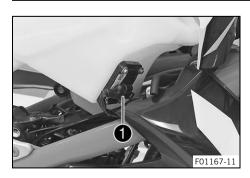

- Do not refuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

# Warning

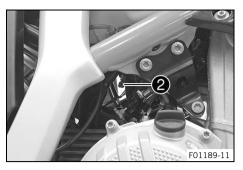

**Danger of poisoning** Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.

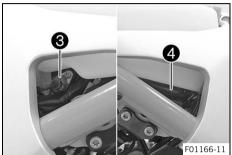

#### Main work

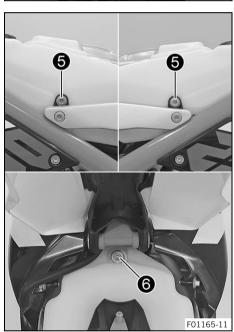

- Make sure that no cables or throttle cables are trapped or damaged.
- Plug in connector 1 for the fuel pump.

- Position the fuel tank.
- Position the intake flange on the throttle valve body.
  - Tighten hose clamp 2.

- Plug in connector 3.
- Position engine breather hose 4.

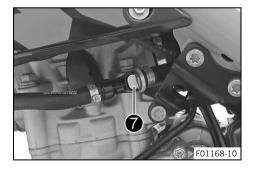

Mount and tighten screws 6 on both sides.
 Guideline

Screw, fuel tank	M8	15 Nm (11.1 lbf ft)
		Loctite®243™

Mount and tighten screw 6.
 Guideline

Remaining screws,	M6	10 Nm (7.4 lbf ft)
chassis		

Attach the fuel tank breather hose.

 Thoroughly clean the plug-in connection of the fuel line using compressed air.

#### Info

Under no circumstances should dirt enter into the fuel line. Dirt in the fuel line clogs the injection valve!

Remove the wash cap set. Lubricate the O-ring and connect plug-in connection for the fuel line.

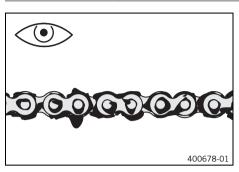

# Info

Route the cable and fuel line at a safe distance from the exhaust system.

# **Finishing work**

Lock the seat. (
 p. 64)

# 12.32 Checking for chain dirt accumulation

- Check the chain for coarse dirt accumulation.
  - » If the chain is very dirty:
    - Clean the chain. (Qp. 74)

# 12.33 Cleaning the chain

# Warning

**Danger of accidents** Oil or grease on the tires reduces the road grip.

Remove the lubricant from the tires using a suitable cleaning agent.

# Warning

Danger of accidents Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

# Warning

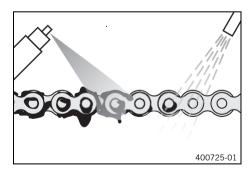

**Environmental hazard** Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

# Info

The service life of the chain depends largely on its maintenance.

#### **Preparatory work**

- Raise the motorcycle with a lift stand. (🕮 p. 53)

#### Main work

- Rinse off loose dirt with a soft jet of water.
- Remove old grease residue with chain cleaner.

Chain cleaner (🕮 p. 146)

After drying, apply chain spray.

Off-road chain spray ( p. 146)

# **Finishing work**

Remove the motorcycle from the lift stand. (
 p. 53)

# 12.34 Checking the chain tension

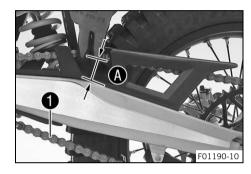

# Warning

**Danger of accidents** Incorrect chain tension damages components and results in accidents.

If the chain is tensioned too much, the chain, engine sprocket, rear sprocket, transmission and rear wheel bearings wear more quickly. Some components may break if overloaded.

If the chain is too loose, the chain may fall off the engine sprocket or the rear sprocket. As a result, the rear wheel locks or the engine will be damaged.

- Check the chain tension regularly.
- Set the chain tension in accordance with the specification.

#### Preparatory work

- Raise the motorcycle with a lift stand. (

p. 53)

#### Main work

- Pull the chain at the end of the chain sliding component upwards to measure chain tension **A**.

# Info

The lower chain section **1** must be taut. Chain wear is not always even, so you should repeat this measurement at different chain positions.

Chain tension	36 40 mm (1.42
	1.57 in)

- » If the chain tension does not meet specifications:

#### Finishing work

- Remove the motorcycle from the lift stand. (🕮 p. 53)

# 12.35 Adjusting the chain tension

# Warning

**Danger of accidents** Incorrect chain tension damages components and results in accidents.

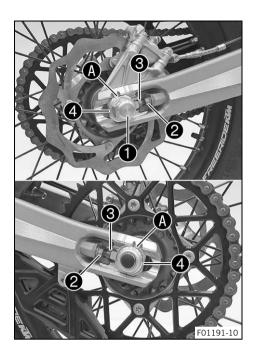

If the chain is tensioned too much, the chain, engine sprocket, rear sprocket, transmission and rear wheel bearings wear more quickly. Some components may break if overloaded.

If the chain is too loose, the chain may fall off the engine sprocket or the rear sprocket. As a result, the rear wheel locks or the engine will be damaged.

- Check the chain tension regularly.
- Set the chain tension in accordance with the specification.

# **Preparatory work**

- Raise the motorcycle with a lift stand. (
  p. 53)
- Check the chain tension. (
  p. 75)

#### Main work

- Loosen nut 1.
- Loosen nuts 2.
- Adjust the chain tension by turning adjusting screws 3 on the left and right.

# Guideline

Chain tension	36 40 mm (1.42
	1.57 in)
Turn adjusting screws 3 on t	he left and right so that the

Turn adjusting screws (3) on the left and right so that the markings on the left and right chain adjusters are in the same position relative to reference marks (A). The rear wheel is then correctly aligned.

- Tighten nuts 2.
- Make sure that chain adjusters 4 are fitted correctly on adjusting screws 3.
- Tighten nut **1**.

#### Guideline

Nut, rear wheel spin-	M20x1.5	80 Nm (59 lbf ft)
dle		

#### Info

The wide adjustment range of the chain adjusters enables different secondary ratios with the same chain length.

Chain adjusters 4 can be turned by 180°.

# Finishing work

- Remove the motorcycle from the lift stand. (🗐 p. 53)

# 12.36 Checking the chain, rear sprocket, engine sprocket and chain guide

#### Preparatory work

# Main work

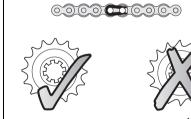

- Shift gear to neutral.
- Check the rear sprocket and engine sprocket for wear.
  - » If the rear sprocket and engine sprocket are worn:
    - Change the drivetrain kit.

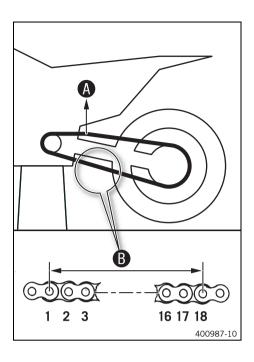

# Info

The engine sprocket, rear sprocket and chain should always be replaced together.

# •

- Pull on the upper part of the chain with the specified weight **A**.

Guideline

Weight, chain wear measure-	10 15 kg (22 33 lb.)
ment	

- Measure the distance **B** of 18 chain links in the lower chain section.

# Info

Chain wear is not always even, so you should repeat this measurement at different chain positions.

Maximum distance <b>B</b> at	272 mm (10.71 in)
the longest chain section	

- » If the distance **B** is greater than the specified measurement:
  - Change the drivetrain kit. 🔌

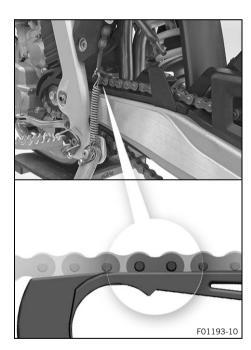

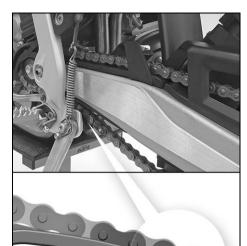

# Info

When the chain is replaced, the rear sprocket and engine sprocket should also be changed. New chains wear out faster on old, worn sprockets.

- Check the chain sliding guard for wear.
  - » If the bottom edge of the chain bolt is in line with or below the chain sliding guard:
    - Change the chain sliding guard. 🔦
- Check that the chain sliding guard is firmly seated.
  - » If the chain sliding guard is loose:
    - Tighten the screws on the chain sliding guard.
       Guideline

Remaining screws,	M6	10 Nm
chassis		(7.4 lbf ft)

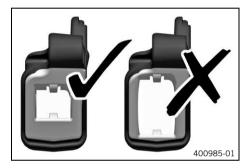

- » If the bottom edge of the chain bolt is in line with or below the chain sliding piece:
  - Change the chain sliding piece.
- Check that the chain sliding piece is firmly seated.
  - » If the chain sliding piece is loose:
    - Tighten the screw on the chain sliding piece.
       Guideline

Screw, chain slid-	M8	15 Nm
ing piece		(11.1 lbf ft)

- Check the chain guide for wear.

F01194-10

# Info

Wear can be seen on the front of the chain guide.

- » If the light part of the chain guide is worn:
  - Change the chain guide.

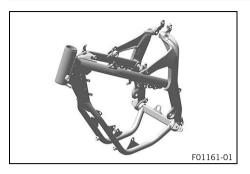

- Check that the chain guide is firmly seated.
  - » If the chain guide is loose:
    - Tighten the fitting on the chain guide.

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
Remaining nuts,	M6	10 Nm
chassis		(7.4 lbf ft)

# Finishing work

- Remove the motorcycle from the lift stand. (■ p. 53)

# 12.37 Checking the frame 🔦

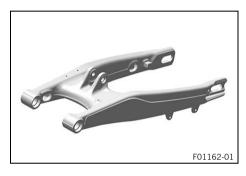

- Check the frame for cracking and deformation.
  - » If the frame exhibits cracking or deformation due to a mechanical impact:
    - Change the frame. 🔦

#### Info

Always replace a frame that has been damaged due to a mechanical impact. Repair of the frame is not authorized by KTM.

# 12.38 Checking the swingarm 4

- Check the swingarm for damage, cracking, and deformation.
  - » If the swingarm shows signs of damage, cracking, or deformation:
    - Change the swingarm.

#### Info

Always change a damaged swingarm. Repair of the swingarm is not authorized by KTM.

# 12.39 Checking the throttle cable routing

# **Preparatory work**

- Fold the seat up. (🕮 p. 64)
- Remove the fuel tank. ♣ (

  p. 70)

# Main work

Check the throttle cable routing.

Both throttle cables must be routed to the throttle valve body side by side behind the handlebars and below the seat fixing.

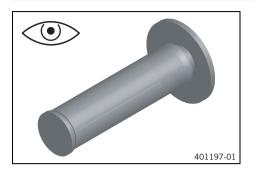

- » If the throttle cable is not routed as specified:
  - Correct the throttle cable routing.

# **Finishing work**

Lock the seat. (
 p. 64)

# 12.40 Checking the rubber grip

 Check the rubber grips on the handlebar for damage, wear, and looseness.

#### Info

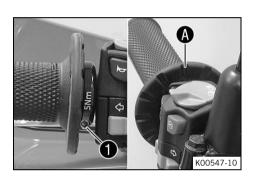

The rubber grips are vulcanized onto a sleeve on the left and onto the handle tube of the throttle grip on the right. The left sleeve is clamped onto the handlebar. The rubber grip can only be replaced with the sleeve or the throttle tube.

- » If a rubber grip is damaged, worn, or loose:
  - Change the rubber grip.
- Check that screw 1 is firmly seated.

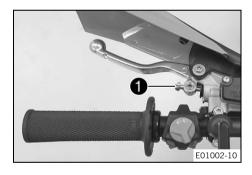

#### Guideline

Diamond A must be located at the top.

# 12.41 Adjusting the basic position of the clutch lever

 Adjust the basic position of the clutch lever to your hand size by turning adjusting screw 1.

# Info

When the adjusting screw is turned clockwise, the clutch lever moves away from the handlebar.
When the adjusting screw is turned counterclockwise, the clutch lever moves closer to the handlebar.
The range of adjustment is limited.
Turn the adjusting screw by hand only, and do not apply force.

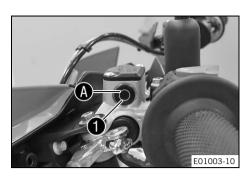

Do not make any adjustments while riding!

# 12.42 Checking fluid level of the hydraulic clutch

# Info

The fluid level rises with increasing wear of the clutch facing discs.

- Move the clutch fluid reservoir mounted on the handlebar into a horizontal position.
- Check the fluid level in viewer 1.
  - If the fluid has dropped below marking in the level viewer:
    - Correct the fluid level of the hydraulic clutch.
       ( p. 81)

# 12.43 Correcting the fluid level of the hydraulic clutch

# Warning

**Skin irritation** Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

#### Warning

**Environmental hazard** Hazardous substances cause environmental damage.

- Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

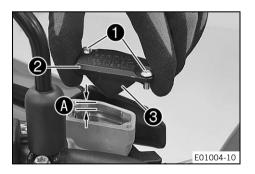

#### Info

The fluid level rises with increasing wear of the clutch facing discs.

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and clutch lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint.

Only use clean brake fluid from a sealed container.

- Move the clutch fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws 1.
- Remove cover 2 with membrane 3.
- Correct the fluid up to level (A).

Guideline

Level (fluid level below container rim)

4 mm (0.16 in)

Brake fluid DOT 4 / DOT 5.1 (
p. 144)

- Position the cover with the membrane. Mount and tighten the screws.

#### Info

Clean up overflowed or spilled brake fluid immediately with water.

4

# 12.44 Changing the hydraulic clutch fluid 🔦

# Warning

**Skin irritation** Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

# Warning

**Environmental hazard** Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

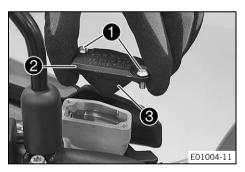

#### Info

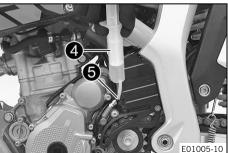

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and clutch lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint.

Only use clean brake fluid from a sealed container.

- Move the clutch fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws 1.
- Remove cover **2** with membrane **3**.

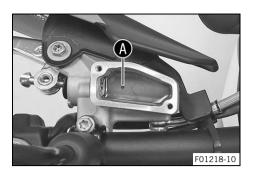

Fill bleeding syringe 4 with the appropriate hydraulic fluid.

Syringe (50329050000)

Brake fluid DOT 4 / DOT 5.1 (

□ p. 144)

On the clutch slave cylinder, remove bleeder screw **5** and mount bleeding syringe **4**.

- Inject the liquid into the system until it escapes from opening A of the master cylinder without bubbles.
- Now and then, extract fluid from the master cylinder reservoir to prevent overflow.
- Remove the bleeding syringe. Mount and tighten screws bleeder screw.
- Correct the fluid level of the hydraulic clutch.

# Guideline

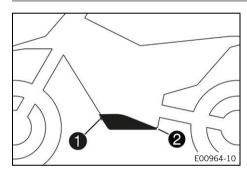

Fluid level below container	4 mm (0.16 in)
rim	

Position the cover with the membrane. Mount and tighten the screws.

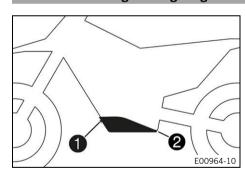

Clean up overflowed or spilled brake fluid immediately with water.

12.45 Removing the engine guard

- Remove screws 1 and 2.
- Lower the engine guard at the rear and remove it toward the front.

12.46 Installing the engine guard

- Position the engine guard on the frame at the front and mount screws 1 but do not tighten yet.
- Position the engine guard on the frame at the rear and mount and tighten screws 2.

# Guideline

Screw, engine guard	M6x20	10 Nm (7.4 lbf ft)
---------------------	-------	--------------------

Tighten screws 1.

Guideline			
	Screw, engine guard	M6x12	10 Nm (7.4 lbf ft)

# 13.1 Checking the free travel of the hand brake lever

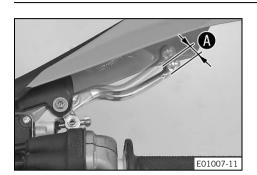

# Warning

**Danger of accidents** The brake system fails in the event of overheating.

If there is no free travel on the hand brake lever, pressure builds up on the front brake circuit.

- Set the free travel on the hand brake lever in accordance with the specification.

 Push the hand brake to the handlebar and check free travel A.

Free travel of hand brake	≥ 3 mm (≥ 0.12 in)
lever	

- » If the free travel does not meet specifications:
  - Adjust the free travel of the handbrake lever. (
    p. 84)

4

# 13.2 Adjusting the free travel of the handbrake lever

- Check the free travel of the hand brake lever. (🕮 p. 84)
- Adjust the free travel of the handbrake lever with adjustment screw ①.

# Info

Turn the adjusting screw clockwise to reduce free travel. The pressure point moves away from the handlebar.

Turn the adjusting screw counterclockwise to increase free travel. The pressure point moves towards the handlebar.

The range of adjustment is limited.

Only turn the adjusting screw by hand, and do not use force

Do not make any adjustments while riding.

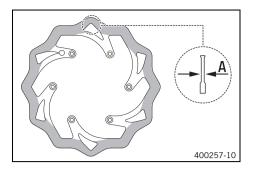

# 13.3 Checking the brake discs

# Warning

**Danger of accidents** Worn-out brake discs reduce the braking effect.

 Make sure that worn-out brake discs are replaced immediately. (Your authorized KTM workshop will be glad to help.)

 Check the front and rear brake disc thickness at multiple points for the dimension A.

#### Info

Wear reduces the thickness of the brake disc around the contact surface of the brake linings.

Brake discs - wear limit	
front	3.7 mm (0.146 in)
rear	3.5 mm (0.138 in)

- » If the brake disc thickness is less than the specified value:
  - Change the front brake disc.
  - Change the rear brake disc.
- Check the front and rear brake discs for damage, cracking, and deformation.
  - » If the brake disc exhibits damage, cracking, or deformation:
    - Change the front brake disc.
    - Change the rear brake disc.

13.4 Checking the brake fluid level of the front brake

# Warning

**Danger of accidents** An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

# Warning

**Danger of accidents** Old brake fluid reduces the braking effect.

 Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Check the brake fluid level in the viewer 1.
  - » If the brake fluid has dropped below marking **A**:
    - Add front brake fluid. 🔌 (🕮 p. 86)

# 13.5 Adding front brake fluid 🔦

# Warning

Danger of accidents An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

# Warning

**Skin irritation** Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

# Warning

**Danger of accidents** Old brake fluid reduces the braking effect.

 Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

#### Warning

**Environmental hazard** Hazardous substances cause environmental damage.

- Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

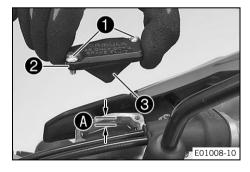

# Info

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint.

Only use clean brake fluid from a sealed container.

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws 1.
- Remove cover 2 with membrane 3.
- Add brake fluid to level **A**.
  Guideline

Level (brake fluid level 5 mm (0.2 in) below reservoir rim)

Brake fluid DOT 4 / DOT 5.1 (

p. 144)

- Position the cover with the membrane. Mount and tighten the screws.

# Info

Clean up overflowed or spilled brake fluid immediately with water.

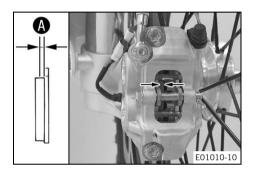

#### 13.6 Checking the front brake linings

# Warning

**Danger of accidents** Worn-out brake linings reduce the braking effect.

Ensure that worn-out brake linings are replaced immediately. (Your authorized KTM workshop will be glad to help.)

Check the brake linings for minimum thickness **A**.

Minimum thickness A

≥ 1 mm (≥ 0.04 in)

- If the minimum thickness is less than specified:
  - Change the front brake linings. ◀ (學 p. 87)
- Check the brake linings for damage and cracking.
  - If damage or cracking is visible:

#### 13.7 Changing the front brake linings 🔌

# Warning

**Danger of accidents** Incorrect maintenance will cause the brake system to fail.

Ensure that service work and repairs are performed professionally. (Your authorized KTM workshop will be glad to help.)

# Warning

Skin irritation Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact
- If brake fluid spills on to your clothing, change the clothing.

# Warning

**Danger of accidents** Old brake fluid reduces the braking effect.

Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

# Warning

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

# Warning

**Danger of accidents** Brake linings which have not been approved alter the braking efficiency.

Not all brake linings are tested and approved for KTM motorcycles. The structure and friction coefficient of the brake linings, and thus their brake power, may vary greatly from that of original brake linings. If brake linings are used that differ from the original equipment, compliance with the original homologation is not guaranteed. In this case, the vehicle no longer corresponds to its condition at delivery and the warranty shall be void.

Only use brake linings approved and recommended by KTM.

# Warning

**Environmental hazard** Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

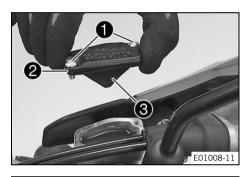

#### Info

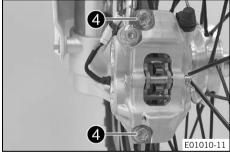

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint.

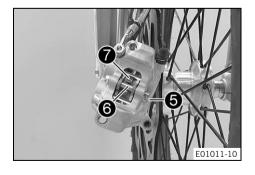

Only use clean brake fluid from a sealed container.

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws 1.
- Remove cover **2** with membrane **3**.

- Remove screws 4 and spacers.
- Press back the brake linings with a light lateral tilting of the brake caliper on the brake disc. Carefully pull the brake caliper backward from the brake disc.
- Press the brake piston back into the basic position and ensure that brake fluid does not flow out of the brake fluid reservoir, sucking it away if necessary.

- Remove cotter pin 6.
- Remove pin 🔞.
- Take off retaining spring and remove the brake linings.
- Clean the brake caliper.
- Position the new brake linings.

#### Info

Always change the brake linings in pairs.

- Position retaining spring 7.
- Mount pin 🔞.

# Info

To make it easier to mount the pin, push the retainer spring down.

Make sure the retaining spring is seated correctly.

- Position the brake caliper. Mount screws 4 with the spacers but do not tighten yet.
- Operate the hand brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point. Fix the hand brake lever in the activated position.
  - ✓ The brake caliper straightens.
- Tighten screws **4**.

Guideline

Screw, front	M8	25 Nm (18.4 lbf ft)
brake caliper		Loctite®243™

- Remove the locking piece of the hand brake lever.
- Add brake fluid to level  $oldsymbol{\mathbb{A}}$  .

Guideline

 Position the cover with the membrane. Mount and tighten the screws.

#### Info

Clean up overflowed or spilled brake fluid immediately with water.

# 13.8 Checking the free travel of foot brake lever

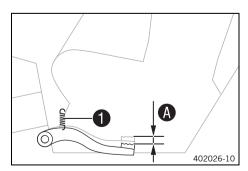

# Warning

**Danger of accidents** The brake system fails in the event of overheating.

If there is no free travel on the foot brake lever, pressure builds up in the brake system on the rear brake.

- Set the free travel on the foot brake lever in accordance with the specification.

- Disconnect spring 1.
- Move the foot brake lever back and forth between the end stop and the contact to the foot brake cylinder piston and check free travel (A).

Guideline

Free travel at foot brake lever 3 ... 5 mm (0.12 ... 0.2 in)

- » If the free travel does not meet specifications:
  - Adjust the basic position of the foot brake lever. ♣
     (♠ p. 90)

# 13.9 Adjusting the basic position of the foot brake lever 🔌

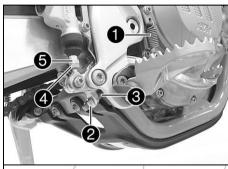

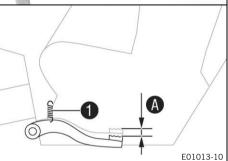

# Warning

Danger of accidents The brake system fails in the event of overheating.

If there is no free travel on the foot brake lever, pressure builds up in the brake system on the rear brake.

- Set the free travel on the foot brake lever in accordance with the specification.

- Disconnect spring 1.
- Loosen nut **4** and, with push rod **5**, turn it back until you have maximum free travel.
- To adjust the basic position of the foot brake lever individually, loosen nut 2 and turn screw 3 accordingly.

#### Info

The range of adjustment is limited.

Turn push rod accordingly until you have free travel necessary, adjust the basic position of the foot brake lever.
 Guideline

Free travel at foot brake lever 3 ... 5 mm (0.12 ... 0.2 in)

Hold screw 3 and tighten nut 2.

Guideline

Nut, foot brake lever	M8	20 Nm (14.8 lbf ft)
stop		

- Hold push rod f 6 and tighten nut f 4.

Guideline

ſ	Remaining nuts,	M6	10 Nm (7.4 lbf ft)
	chassis		

Reconnect spring ①.

# 13.10 Checking the rear brake fluid level

# Warning

**Danger of accidents** An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

# **Warning**

**Danger of accidents** Old brake fluid reduces the braking effect.

- Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

- Stand the vehicle upright.
- Check the brake fluid level in the viewer 1.
  - » If the brake fluid level drops below marking **A**:

# 13.11 Adding rear brake fluid 🔌

# Warning

**Danger of accidents** An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

# Warning

**Skin irritation** Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

# Warning

**Danger of accidents** Old brake fluid reduces the braking effect.

 Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

# Warning

**Environmental hazard** Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

#### Info

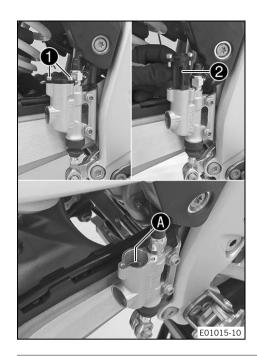

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint.

Only use clean brake fluid from a sealed container.

#### Preparatory work

- Check the rear brake linings. (🕮 p. 92)

#### Main work

- Stand the vehicle upright.
- Remove screws 1.
- Take off the cover with the washer and membrane 2.
- Add brake fluid to the mark  $oldsymbol{A}$  .

Brake fluid DOT 4 / DOT 5.1 (

p. 144)

- Position the cover with the washer and membrane.
- Mount and tighten the screws.

# Info

Clean up overflowed or spilled brake fluid immediately with water.

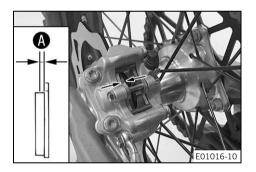

# 13.12 Checking the rear brake linings

#### Warning

Danger of accidents Worn-out brake linings reduce the braking effect.

 Ensure that worn-out brake linings are replaced immediately. (Your authorized KTM workshop will be glad to help.)

- Check the brake linings for minimum thickness **A**.

Minimum thickness  $\triangle$   $\geq 1 \text{ mm (} \geq 0.04 \text{ in)}$ 

- » If the minimum thickness is less than specified:
- Check the brake linings for damage and cracking.
  - » If damage or cracking is visible:
    - Change the rear brake linings. 🔌 🕮 p. 92)

# 13.13 Changing the rear brake linings 4

# Warning

**Danger of accidents** Incorrect maintenance will cause the brake system to fail.

- Ensure that service work and repairs are performed professionally. (Your authorized KTM workshop will be glad to help.)

# Warning

**Skin irritation** Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

# Warning

**Danger of accidents** Old brake fluid reduces the braking effect.

 Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

#### Warning

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

#### Warning

Danger of accidents Brake linings which have not been approved alter the braking efficiency.

Not all brake linings are tested and approved for KTM motorcycles. The structure and friction coefficient of the brake linings, and thus their brake power, may vary greatly from that of original brake linings. If brake linings are used that differ from the original equipment, compliance with the original homologation is not guaranteed. In this case, the vehicle no longer corresponds to its condition at delivery and the warranty shall be void.

- Only use brake linings approved and recommended by KTM.

#### Warning

**Environmental hazard** Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

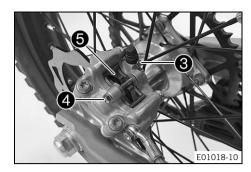

#### Info

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint. Only use clean brake fluid from a sealed container.

- Stand the vehicle upright.
- Remove screws 1.
- Take off the cover with the washer and membrane 2.
- Press the brake piston back into the basic position and ensure that brake fluid does not flow out of the brake fluid reservoir; if necessary, draw some off.

- Remove cotter pin 3.
- Remove pin 4.
- Take off retainer spring **6** and remove the brake linings.
- Clean the brake caliper.

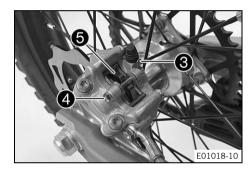

Position new brake linings.

# Info

Always change the brake linings in pairs.

- Position retaining spring **5**.
- Mount pin 4.

To make it easier to mount the pin, push the retainer

Make sure the retaining spring is seated correctly.

- Mount cotter pins 3.
- Operate the foot brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point.
- Add brake fluid to level **A**.

Brake fluid DOT 4 / DOT 5.1 (🕮 p. 144)

Position the cover with the washer and membrane **2**.

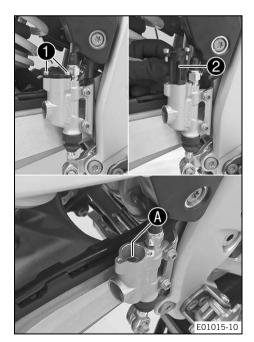

Mount and tighten screws 1.

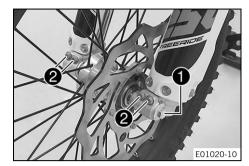

# Info

Clean up overflowed or spilled brake fluid immediately with water.

# 14.1 Removing the front wheel 🔌

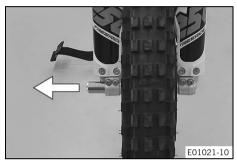

# Preparatory work

- Raise the motorcycle with a lift stand. (
p. 53)

#### Main work

- Loosen screw 1 by several rotations.
  - Loosen screws 2.
- Press on screw 1 to push the wheel spindle out of the axle clamp.
- Remove screw 1.

# Warning

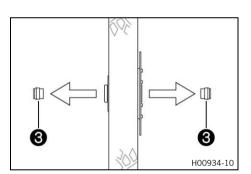

**Danger of accidents** Damaged brake discs reduce the braking effect.

- Always lay the wheel down in such a way that the brake disc is not damaged.
- Holding the front wheel, withdraw the wheel spindle. Take the front wheel out of the fork.

# Info

Do not pull the hand brake lever when the front wheel is removed.

Remove spacers 3.

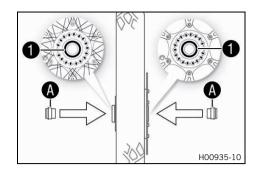

# 14.2 Installing the front wheel 4

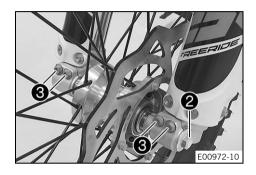

# Warning

Danger of accidents Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

- Check the wheel bearing for damage and wear.
  - » If the wheel bearing is damaged or worn:
    - Change front wheel bearing.
- Clean and grease shaft seal rings **1** and contact surface **A** of the spacers.

Long-life grease (🕮 p. 146)

- Insert the spacers.
- Clean and grease the wheel spindle.

Long-life grease (🕮 p. 146)

- Position the front wheel and insert the wheel spindle.
  - ✓ The brake linings are correctly positioned.
- Mount and tighten screw **2**.

Guideline

Screw, front wheel	M20x1.5	35 Nm (25.8 lbf ft)
spindle		

- Operate the hand brake lever several times until the brake linings are seated correctly against the brake disc.
- Remove the motorcycle from the lift stand. (
   p. 53)
- Operate the front brake and compress the fork a few times firmly.
  - ✓ The fork legs straighten.
- Tighten screws 3.

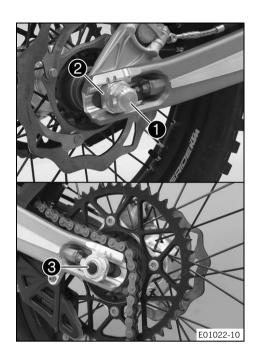

Guideline

Screw, fork stub	M8	15 Nm (11.1 lbf ft)
------------------	----	---------------------

4

# 14.3 Removing the rear wheel 4

# **Preparatory work**

#### Main work

- Remove nut 1.
- Remove chain adjuster **2**.
- Pull out wheel spindle 3 far enough to allow the rear wheel to be pushed forward.
- Push the rear wheel forward as far as possible. Remove the chain from the rear sprocket.

#### Info

Cover the components to protect them against damage.

# Warning

**Danger of accidents** Damaged brake discs reduce the braking effect.

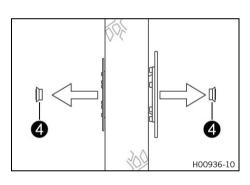

- Always lay the wheel down in such a way that the brake disc is not damaged.
- Holding the rear wheel, withdraw the wheel spindle. Take the rear wheel out of the swingarm.

# Info

Do not operate the foot brake lever when the rear wheel is removed.

Remove spacers 4.

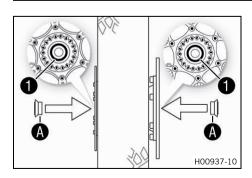

# 14.4 Installing the rear wheel 4

# Warning

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

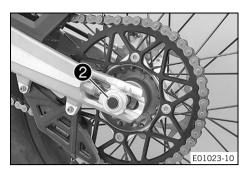

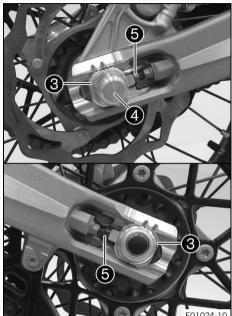

#### Main work

- Check the wheel bearing for damage and wear.
  - » If the wheel bearing is damaged or worn:
    - Change the rear wheel bearing.
- Clean and grease shaft seal rings 
   and contact surface 
   of the spacers.

Long-life grease (🕮 p. 146)

- Insert the spacers.

Clean and grease the wheel spindle.

Long-life grease (
p. 146)

- Lift the rear wheel into the swingarm, position it, and insert wheel spindle 2.
- Mount the chain.
  - ✓ The brake linings are correctly positioned.
- Position chain adjuster **3**. Mount nut **4**, but do not tighten it yet.
- Make sure that chain adjusters 3 are fitted correctly on adjusting screws 5.
- Tighten nut **4**.

# Guideline

Nut, rear wheel spin-	M20x1.5	80 Nm (59 lbf ft)
dle		

# Info

The wide adjustment range of the chain adjusters enables different secondary ratios with the same chain length

Chain adjusters 3 can be turned by 180°.

 Operate the foot brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point.

# Finishing work

# 14.5 Checking the tire condition

# Info

Only mount tires approved and/or recommended by KTM.

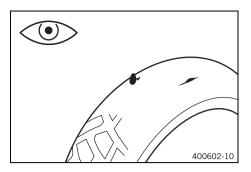

Other tires could have a negative effect on handling characteristics.

The type, condition, and air pressure of the tires all have a major impact on the handling of the motorcycle

The tires mounted on the front and rear wheels must have a similar profile.

Worn tires have a negative effect on handling characteristics, especially on wet surfaces.

If used regularly on public roads, tires wear much faster and the minimum tread depth and general condition of the tires must be checked more frequently.

- » If the tires have cuts, run-in objects, or other damage:
  - Change the tires. 4
- Check the tread depth.

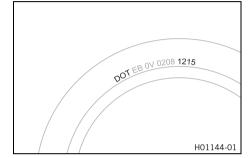

# Info

Adhere to the legally required minimum tread depth.

Minimum tread depth	≥ 2 mm (≥ 0.08 in)

- » If the tread depth is less than the minimum tread depth:
  - Change the tires.
- Check the tire age.

# Info

The tire date of manufacture is usually contained in the tire label and is indicated by the last four digits of the **DOT** number. The first two digits indicate the week of manufacture and the last two digits the year of manufacture.

KTM recommends that the tires be changed after 5 years at the latest, regardless of the actual state of wear.

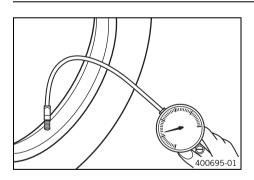

- » If the tires are more than 5 years old:
  - Change the tires.

# 14.6 Checking the tire air pressure

# Info

Low tire air pressure leads to abnormal wear and overheating of the tire. Correct tire air pressure ensures optimal riding comfort and maximum tire service life.

- Remove the protection cap.

Tire air pressure, offroad

Check the tire air pressure when the tires are cold.

front	0.9 bar (13 psi)
rear	0.7 bar (10 psi)
Tire air pressure, road	

Tire air pressure, road		
front	1.5 bar (22 psi)	
rear	1.5 bar (22 psi)	

- » If the tire pressure does not meet specifications:
  - Correct the tire pressure.
- Mount protection cap.

•

# 14.7 Checking the spoke tension

# Warning

**Danger of accidents** Incorrectly tensioned spokes impair the handling characteristic and result in secondary damage.

The spokes break due to being overloaded if they are too tightly tensioned. If the tension in the spokes is too low, then lateral and radial run-out will form in the wheel. Other spokes will become looser as a result.

 Check spoke tension regularly, and in particular on a new vehicle. (Your authorized KTM workshop will be glad to help.)

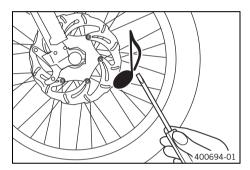

# Info

A loose spoke causes wheel imbalance and rapidly leads to more loose spokes.

If the spokes are too tight, they can break due to local overload.

Check the spoke tension regularly, especially on a new motorcycle.

Briefly strike each spoke with the tip of a screwdriver.

#### Info

The tone frequency depends on the length of the spoke and the spoke diameter.

If you hear different tone frequencies from different spokes of equal length and diameter, this is an indication of different spoke tensions.

You should hear a high note.

- » If the spoke tension varies:
  - Correct the spoke tension.
- Check the spoke torque.

Guideline

Spoke nipple	M4.5	6 Nm (4.4 lbf ft)
Torque wrench set (58429094000)		

#### 15.1 Removing the battery &

# Warning

**Environmental hazard** Batteries contain environmentally-hazardous materials.

- Do not dispose of batteries as household waste.
- Dispose of batteries at a collection point for used batteries.

# Warning

**Environmental hazard** Hazardous substances cause environmental damage.

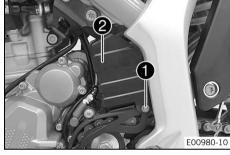

Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

# Preparatory work

Turn the key in the ignition lock to the position ⊗ while the engine is idling.

#### Main work

- Remove screw 1.
- Remove fastening plate **2**.

Remove the battery from the battery compartment.

# Warning

Risk of injury Batteries contain harmful substances.

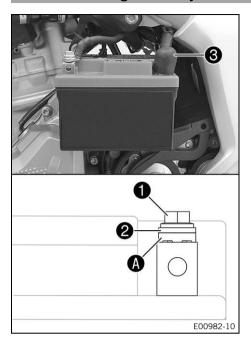

- Keep batteries out of the reach of children.
- Keep sparks and open flames away from the batter-
- Only charge batteries in well-ventilated rooms.
- Maintain a minimum clearance from inflammable materials when charging batteries.

1 m (3 ft) Minimum clearance

- Do not charge deeply discharged batteries if charge is already below the minimum voltage.
  - Minimum voltage before 9 V the start of the charge
- Dispose of batteries with less than the minimum voltage correctly.
- Disconnect negative cable **3** from the battery.
- Pull back positive terminal cover 4 and disconnect the positive cable from the battery.

# 15.2 Installing the battery 🔌

Position the positive cable and mount and tighten the screw.
 Guideline

Screw, battery termi-	M5	2.5 Nm
nal		(1.84 lbf ft)

Battery (HJTZ5S-FP) (🕮 p. 140)

#### Info

Contact disks **(A)** must be mounted under the screw **(1)** and the cable lug **(2)** with the claws toward the battery terminal.

- Slide positive terminal cover **3** over the positive terminal.
- Position the negative cable and mount and tighten the screw.
   Guideline

Screw, battery termi-	M5	2.5 Nm
nal		(1.84 lbf ft)

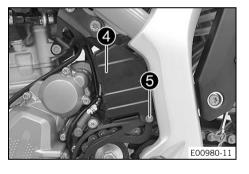

#### Info

Contact disks (A) must be mounted under the screw (1) and the cable lug (2) with the claws toward the battery terminal.

- Attach fastening plate 4.
- Mount and tighten screw 6.

# 15.3 Recharging the battery 4

# Warning

Risk of injury Batteries contain harmful substances.

- Keep batteries out of the reach of children.
- Keep sparks and open flames away from the batteries.
- Only charge batteries in well-ventilated rooms.
- Maintain a minimum clearance from inflammable materials when charging batteries.
   Minimum clearance
   1 m (3 ft)

Do not charge deeply discharged batteries if charge is already below the minimum voltage.
 Minimum voltage before the start of the charge 9 V

- Dispose of batteries with less than the minimum voltage correctly.

#### Warning

**Environmental hazard** Batteries contain environmentally-hazardous materials.

- Do not dispose of batteries as household waste.
- Dispose of batteries at a collection point for used batteries.

#### Warning

**Environmental hazard** Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

#### Info

Even when there is no load on the battery, it discharges steadily.

The charging level and the method of charging are very important for the service life of the battery. Rapid recharging with a high charging current shortens the service life of the battery.

If the charging current, charging voltage, or charging time are exceeded, the battery will be destroyed.

If the battery is depleted by repeated starting, the battery must be charged immediately.

If the battery is left in a discharged state for an extended period, it will become over-discharged and sulfated, destroying the battery.

The battery is maintenance-free.

# Preparatory work

- Remove the battery. ◀ (學 p. 101)

# Main work

- Check the battery voltage.
  - » Battery voltage: < 9 V
    - Do not charge the battery.
    - Replace the battery and dispose of the old battery properly.
  - » If the specifications have been met:

Battery voltage: ≥ 9 V

 Connect the battery charger to the battery. Switch on the battery charger.

#### Guideline

Maximum charging voltage	14.4 V
Maximum charging cur- rent	3.0 A
Maximum charging time	12 h
Charge the battery regularly when the motorcycle is not in use	6 months
Ideal charging and storage temperature of the lithium-ion battery	10 20 °C (50 68 °F)

Battery charger (58429074000)

The charging time may be longer at low temperatures. This battery charger is not suitable for the trickle charging of lithium-ion batteries.

#### Info

Never remove cover 1.

Switch off the battery charger after charging and disconnect from the battery.

# **Finishing work**

Install the battery. 🔌 (🕮 p. 102)

#### 15.4 Changing the main fuse

# Warning

Fire hazard Incorrect fuses overload the electrical system.

- Only use fuses with the required ampere value.
- Do not bypass or repair fuses.

The main fuse protects all power consumers of the vehicle. It is located behind the battery.

#### Preparatory work

- Turn the key in the ignition lock to the position ⊗ while the engine is idling.
- Raise the motorcycle with a lift stand. (
  p. 53)
- Fold the seat up. (
  p. 64)
- Remove the shock absorber. 4 (\$\mathbb{P}\$ p. 63)

# Main work

Take off protection caps 1.

Remove faulty main fuse 2.

# Info

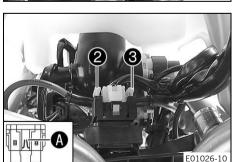

You can recognize a faulty fuse by a burned-out fuse

A spare fuse **3** is located in the starter relay.

Install a new main fuse.

Fuse (58011109120) (🕮 p. 140)

Check that the electrical system is functioning properly.

# Tip

Insert a spare fuse so that it is available if needed.

- Mount the protection caps.

#### **Finishing work**

- Lock the seat. (
   p. 64)
- Remove the motorcycle from the lift stand. (
   p. 53)

# 15.5 Changing the fuses of individual power consumers

# Info

The fuse box containing the fuses of individual power consumers is located under the seat.

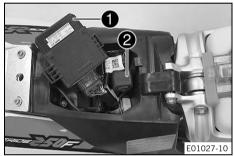

# Preparatory work

- Turn the key in the ignition lock to the position 

  while the engine is idling.
- Fold the seat up. (
   p. 64)

#### Main worl

- Pull EFI control unit 1 off the holder and hang to the side.
- Open fuse box cover 2.

- Remove the faulty fuse.

# Guideline

Fuse 1 - 10 A - EFI control unit, lambda sensor, injection valve, combination instrument, diagnostics connector

Fuse **2** - 10 A - high beam, low beam, parking light, tail light, license plate lamp

Fuse 3 - 10 A - horn, turn signal, brake light, radiator fan

Fuse 4 - 10 A - fuel pump

Fuses **res** – 10 A – spare fuses

#### Info

You can recognize a faulty fuse by a burned-out fuse wire  $oldsymbol{\mathbb{A}}$ .

# Warning

**Fire hazard** Incorrect fuses overload the electrical system.

- Only use fuses with the required ampere value.
- Do not bypass or repair fuses.
- Use spare fuses with the correct rating only.

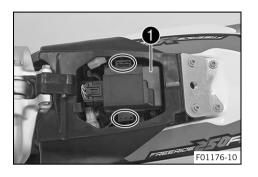

Fuse (75011088010) (🕮 p. 140)

# Tip

Replace the spare fuse in the fuse box so that it is available if needed.

- Check that the power consumer is functioning properly.
- Close the fuse box cover.
- Mount EFI control unit 1 on the holder.

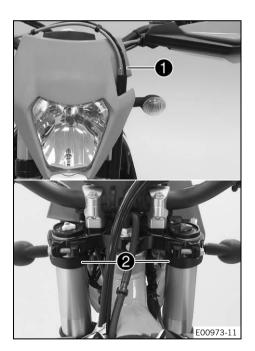

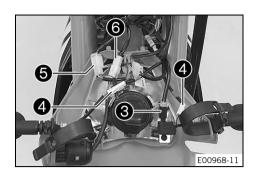

# Finishing work

Lock the seat. (록 p. 64)

# 15.6 Removing the headlight mask with the headlight

- Turn the key in the ignition lock to the position  $\boxtimes$  while the engine is idling.
- Detach the brake line and wiring harness  $\mathbf{1}$ .
- Release rubber bands **2**. Slide the headlight mask up and swing it forward.

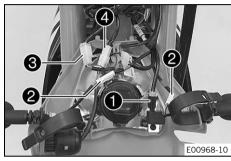

Disconnect plug-in connector 3 of the turn signal relay, plug-in connectors 4 of the turn signals, plug-in connector 5 of the headlight and plug-in connector 6 of the ignition lock.

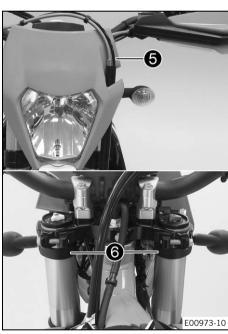

•

# 15.7 Installing the headlight mask with the headlight

# Main work

Join plug-in connector ① of the turn signal relay, plug-in connectors ② of the turn signals, plug-in connector ③ of the headlight and plug-in connector ④ of the ignition lock.

- Attach the brake line and wiring harness **5**.
- Position the headlight mask and secure it with rubber bands 6.
  - ✓ The holding lugs on the fender engage in the headlight mask.

# Finishing work

- Check the headlight setting. (₽ p. 109)

4

# 15.8 Changing the headlight bulb

#### Note

**Damage to reflector** Grease on the reflector reduces the brightness.

Grease on the bulb will evaporate due to the heat and be deposited on the reflector.

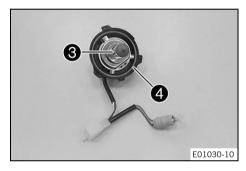

- Clean and degrease the bulbs before mounting.
- Do not touch the bulbs with your bare hands.

# 2 1 E01029-10

#### Preparatory work

#### Main work

- Turn protection cap **1** together with the underlying bulb socket counterclockwise all the way and remove it.
- Pull bulb socket 2 of the parking light out of the reflector.

- Pull out headlight bulb 3.
- Insert the new headlight bulb.

Headlight (HS1 / socket PX43t) (
p. 140)

 Insert the protection cap with the bulb socket into the reflector and turn it clockwise all the way.

#### Info

Ensure that O-ring 4 is seated properly.

Insert the bulb socket of the parking light into the reflector.

# Finishing work

# 15.9 Changing the turn signal bulb

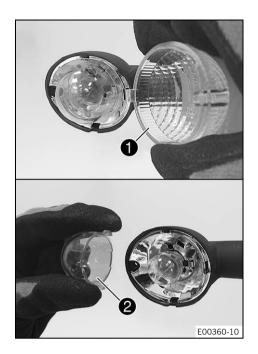

#### Note

Damage to reflector Grease on the reflector reduces the brightness.

Grease on the bulb will evaporate due to the heat and be deposited on the reflector.

- Clean and degrease the bulbs before mounting.
- Do not touch the bulbs with your bare hands.

\_

#### Main work

- Remove the screw on the rear of the turn signal housing.
  - Carefully remove diffuser 1.
- Lightly squeeze together the orange cap 2 in the area of the holding lugs and take it off.
- Press the turn signal bulb carefully into the socket, turn it counterclockwise by about 30°, and take it out of the socket.

#### Info

Do not touch the reflector with your fingers, and keep it free from grease.

 Press the new turn signal bulb carefully into the socket and turn it clockwise until it stops.

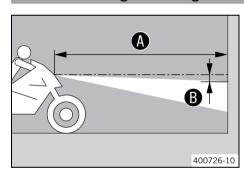

Turn signal (R10W/socket BA15s) (
p. 140)

- Mount the orange cap.
- Position the diffuser.
- Insert the screw and first turn it counterclockwise until it engages in the thread. Tighten the screw slightly.

#### **Finishing work**

- Check that the turn signal system is functioning properly.

# 15.10 Checking the headlight setting

- Position the vehicle upright on a horizontal surface in front of a light wall and make a mark at the height of the center of the low beam headlight.

Distance **B** 5 cm (2 in)

Position the vehicle vertically at a distance (A) away from the wall.

Guideline

Distance **A** 5 m (16 ft)

- The rider now sits down on the motorcycle.
- Switch on the low beam.
- Check the headlight setting.

The boundary between light and dark must be exactly on the lower mark for a motorcycle with driver.

- » If the boundary between light and dark does not meet specifications:
  - Adjust the headlight range. (

    p. 110)

4

# 15.11 Adjusting the headlight range

#### **Preparatory work**

- Check the headlight setting. ( p. 109)

#### Main work

- Loosen screw 1.
- Adjust the headlight range by pivoting the headlight.
   Guideline

The boundary between light and dark must be exactly on the lower marking for a motorcycle with rider (instructions on how to apply the marking: Checking the headlight setting).

#### Info

A change in weight on the vehicle may require a correction of the headlight range.

– Tighten screw 1.

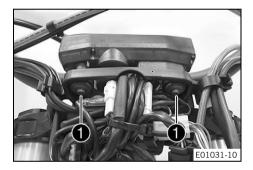

# 15.12 Changing the combination instrument

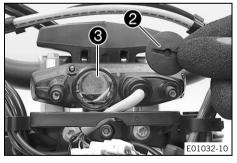

#### **Preparatory work**

- Remove the headlight mask with the headlight. (🕮 p. 106)

#### Main work

- Remove screws 1.
- Pull the combination instrument upward out of the holder.

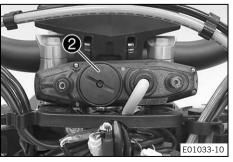

- Using a coin, turn protection cap 2 all the way counterclockwise and remove it.
- Remove combination instrument 3.
- Insert the new battery with the label facing outward.

Combination instrument battery (CR 2430) (
p. 140)

Check the O-ring of the protection cap for correct seating.

- Position protection cap 2 and turn all the way clockwise using a coin.
- Press any button on the combination instrument.
  - ✓ The combination instrument is activated.
- Position the combination instrument in the holder.
- Mount and tighten the screws with washers.

\_

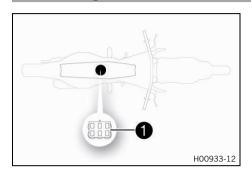

# Finishing work

- Install the headlight mask with the headlight. (

  p. 107)

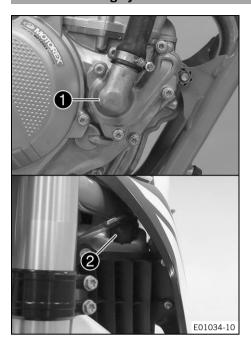

- Adjust the combination instrument. ( p. 23)
- Adjust the clock. (
   p. 24)

# 15.13 Diagnostics connector

Diagnostics connector 1 is located under the seat.

# 16.1 Cooling system

Water pump 1 in the engine circulates the coolant.

The pressure resulting from the warming of the cooling system is regulated by a valve in radiator cap ②. This ensures that operating the vehicle at the specified coolant temperature will not result in a risk of malfunctions.

#### 120 °C (248 °F)

Cooling is effected by the air stream.

The lower the speed, the less the cooling effect. Dirty cooling fins also reduce the cooling effect.

The radiator fan provides extra cooling. It is controlled by a thermoswitch.

# 16.2 Checking the antifreeze and coolant level

#### Warning

**Danger of scalding** During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

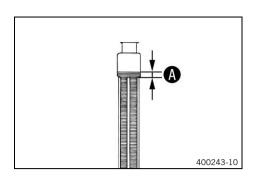

# Warning

**Danger of poisoning** Coolant is toxic and a health hazard.

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

#### Condition

The engine is cold.

- Stand the motorcycle upright on a horizontal surface.
- Remove the radiator cap.
- Check the antifreeze in the coolant.

- » If the antifreeze in the coolant does not match the specified value:
  - Correct the antifreeze in the coolant.
- Check the coolant level in the radiator.

Coolant level (A) above the	10 mm (0.39 in)
radiator fins	

- » If the coolant level does not match the specified value:
  - Correct the coolant level.

Mount the radiator cap.

# 16.3 Checking the coolant level

#### Warning

Danger of scalding During motorcycle operation, the coolant gets very hot and is under pressure.

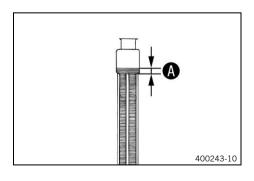

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses
  or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

## Warning

**Danger of poisoning** Coolant is toxic and a health hazard.

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

# Condition

The engine is cold.

- Stand the motorcycle upright on a horizontal surface.
- Remove the radiator cap.
- Check the coolant level in the radiator.

Coolant level (A) above the	10 mm (0.39 in)
radiator fins	

- » If the coolant level does not match the specified value:
  - Correct the coolant level.

Coolant (@ p. 144)

Mount the radiator cap.

•

# 16.4 Draining the coolant 🔦

## Warning

**Danger of scalding** During motorcycle operation, the coolant gets very hot and is under pressure.

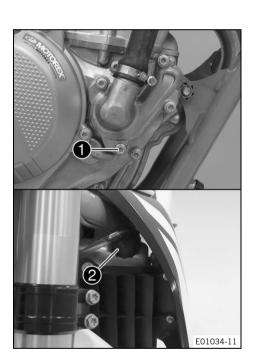

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses
  or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

# Warning

**Danger of poisoning** Coolant is toxic and a health hazard.

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

#### Condition

The engine is cold.

- Position the motorcycle upright.
- Place a suitable container under the water pump cover.
- Remove screw ①. Take off radiator cap ②.
- Completely drain the coolant.
- Mount and tighten screw with a new seal ring.
   Guideline

Screw, water pump	M6	10 Nm (7.4 lbf ft)
cover		

\_

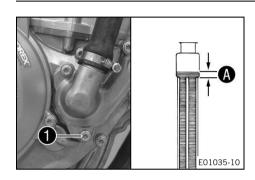

# 16.5 Refilling coolant &

# Warning

**Danger of poisoning** Coolant is toxic and a health hazard.

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

#### Main work

- Make sure that screw 1 is tightened.
- Stand the motorcycle upright.
- Pour coolant in up to measurement A above the radiator fins.
   Guideline

10 mm (0.39 in)		
Coolant	0.7 l (0.7 qt.)	Coolant (🕮 p. 144)

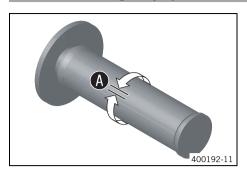

- Mount the radiator cap.

## **Finishing work**

- Take a short test ride.

•

# 17.1 Checking the play in the throttle cable

- Check the throttle grip for smooth operation.
- Move the handlebar to the straight-ahead position. Turn the throttle grip back and forth slightly and determine the play in throttle cable .

Throttle cable play

3 ... 5 mm (0.12 ... 0.2 in)

- If the throttle cable play does not meet specifications:
  - Adjust the play in the throttle cable. ◄ (♥ p. 116)

## **Danger**

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.
- Start the engine and let it run idle. Move the handlebar to and fro over the entire steering range.

The idle speed must not change.

- » If the idle speed changes:

17.2 Adjusting the play in the throttle cable 🔧

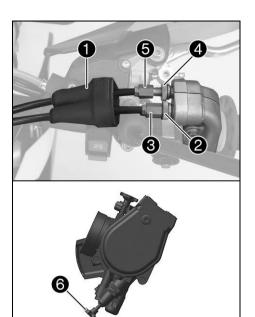

#### Info

If the correct routing of the throttle cables has already been secured, the fuel tank does not need to be removed.

## Preparatory work

- Fold the seat up. (
   p. 64)

116

#### Main work

- Move the handlebar to the straight-ahead position.
- Push back sleeve 1.
- Loosen nut **2**.
- Turn adjusting screw 3 in as far as possible.
- Loosen nut 4.
- Push cold start button **6** all the way to the stop.
- Turn adjusting screw 5 so that the cold start button moves to the basic position when the throttle grip is turned to the front.
- Tighten nut 4.
- Turn adjusting screw **3** so that there is play in the throttle cable at the throttle grip.

Guideline

Throttle cable play 3 ... 5 mm (0.12 ... 0.2 in)

- Tighten nut **2**.
- Slide on sleeve 1.
- Check the throttle grip for smooth operation.

# Finishing work

- Check the play in the throttle cable. (

p. 116)

# 17.3 Adjusting the characteristic map of the throttle response &

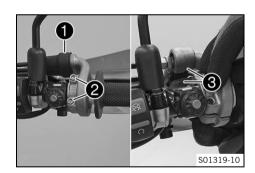

E01036-10

#### Info

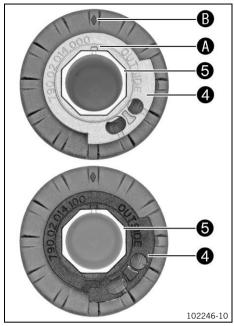

On the throttle grip, the characteristic map of the throttle response is changed by changing the guide plate.

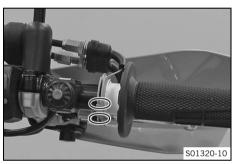

A guide plate with a different characteristic map is supplied.

## Main work

- Push back sleeve 1.
- Remove screws **2** and half-shells **3**.
- Detach the throttle cables and take off the grip tube.

- Remove guide plate **4** from handle tube **5**.
- Position the required guide plate on the grip tube.
   Guideline

The label **OUTSIDE** must be visible. Marking **(A)** must be positioned at marking **(B)**.

Grey guide plate (79002014000)

#### Alternative 1

Black guide plate (79002014100)

#### Info

The gray guide plate opens the throttle valve more slowly.

The black guide plate opens the throttle valve more quickly.

The gray guide plate is mounted upon delivery.

- Clean the outside of the handlebar and the inside of the grip tube. Mount the grip tube on the handlebar.
- Attach the throttle cables to the guide plate and route correctly.
- Position half-shells **3**, mount and tighten screws **2**. Guideline

Screw for throttle	M6	5 Nm (3.7 lbf ft)
grip		

 Slide on sleeve and check the throttle grip for ease of movement.

## **Finishing work**

- Check the play in the throttle cable. (@ p. 116)

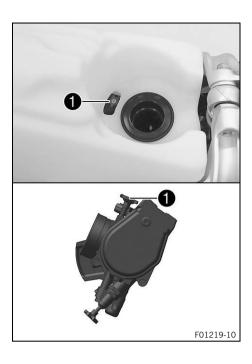

17.4 Adjusting the idle speed 🔌

# Warning

**Danger of accidents** The engine may go out spontaneously if the idle speed is set too low.

- Set the idle speed to the specified value. (Your authorized KTM workshop will be glad to help.)

- Run the engine until warm.
  - ✓ The cold start button is deactivated The cold start button is in its basic position. (

    p. 18)

## **Danger**

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.
- Check idle speed.

Guideline

 Idle speed
 1,750 ... 1,850 rpm

 Tachometer (45129075000)

#### Note

**Engine damage** Unfiltered intake air has a negative effect on the service life of the engine.

Dust and dirt will enter the engine without an air filter.

- Never start to use the vehicle without an air filter.
- Remove the air filter housing. ◀ (學 p. 66)
- Adjust the idle speed by turning idle speed adjusting screw 1.

#### Info

1/4 turn of the idle speed adjusting screw corresponds to approx. 50 rpm.

Adjust the idle speed in small steps.

Turning counterclockwise lowers the idle speed. Turning clockwise raises the idle speed.

Install the air filter housing. ◀ (學 p. 66)

# **Danger**

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.
- Start the engine and check the idle speed.

Guideline

Idle speed 1,750 ... 1,850 rpm

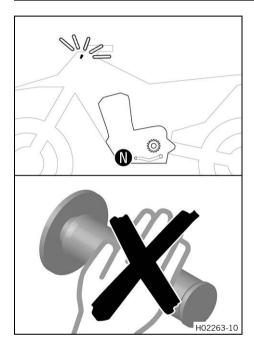

- » If the idle speed does not meet the specifications:
  - Adjust the idle speed.

# 17.5 Teaching the throttle valve position

#### Info

If the control unit detects that the throttle valve idle position needs to be retaught, then the malfunction indicator lamp flashes 2x per second.

## **Danger**

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.
- Allow the vehicle to idle.
  - The malfunction indicator lamp stops flashing once teaching is completed.

#### Info

If the engine becomes too hot, perform a cool-down ride at medium revs.

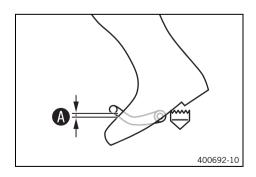

Then do not switch off the engine after this, but leave it running at idle speed until teaching is completed.

17.6 Checking the basic position of the shift lever

# Info

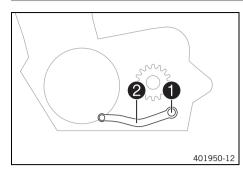

When driving, the shift lever must not touch the driver's boot when in the basic position. When the shift lever keeps touching the boot, the transmission will be subject to an excessive load.

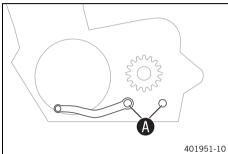

Distance between shift lever and upper edge of boot 10 ... 20 mm (0.39 ... 0.79 in)

- » If the distance does not meet specifications:
  - Adjust the basic position of the shift lever. <sup>3</sup>
     (□ p. 121)

# 17.7 Adjusting the basic position of the shift lever 🔌

 Remove screw 1 with the washers and take off shift lever 2.

- Clean gear teeth (A) of the shift lever and shift shaft.
- Mount the shift lever on the shift shaft in the required position and engage the gearing.

#### Info

The range of adjustment is limited.

The shift lever must not come into contact with any other vehicle components during the shift procedure.

Mount and tighten screw with washers.

# Guideline

Screw, shift	M6	14 Nm (10.3 lbf ft)
lever		Loctite®243™

4

# 18.1 Changing the fuel screen 🔦

# **Danger**

Fire hazard Fuel is highly flammable.

The fuel in the fuel tank expands when warm and can escape if overfilled.

- Do not refuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

#### Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

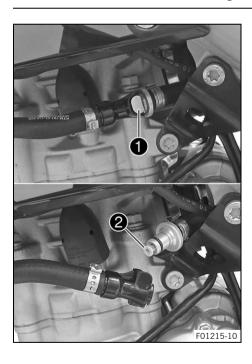

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.

#### Warning

**Environmental hazard** Improper handling of fuel is a danger to the environment.

- Do not allow fuel to enter the groundwater, the soil, or the sewage system.

#### Main work

 Clean plug-in connection of the fuel line thoroughly with compressed air.

#### Info

Under no circumstances should dirt enter into the fuel line. Dirt in the fuel line clogs the injection valve!

Disconnect the plug-in connection of the fuel line.

#### Info

Remaining fuel may flow out of the fuel hose.

- Pull fuel screen **2** out of the connecting piece.
- Insert the new fuel screen all the way into the connecting piece.
- Lubricate the O-ring and join the plug-in connection of the fuel line.

#### **Finishing work**

#### **Danger**

Danger of poisoning Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.
- Start the engine and check the response.

#### 18.2 Checking the engine oil level

#### Preparatory work

Stand the motorcycle upright on a horizontal surface.

#### Condition

The engine is at operating temperature.

Check the engine oil level.

#### Info

After switching off the engine, wait one minute before checking the level.

The engine oil is at a level between the lower edge (A) and the middle **B** of the level viewer.

- If the engine oil is not up to the lower edge (A) of the level viewer:
  - Add engine oil. ( p. 126)

#### 18.3 Changing the engine oil and oil filter, cleaning the oil screen 🔌

## Warning

**Danger of scalding** Engine and gear oil get very hot when the motorcycle is ridden.

- Wear suitable protective clothing and safety gloves.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

## Warning

**Environmental hazard** Hazardous substances cause environmental damage.

Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

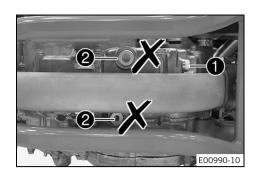

## Info

Drain the engine oil while the engine is at operating temperature.

# Preparatory work

- Park the motorcycle on a level surface.
- Remove the engine guard. (
  p. 83)

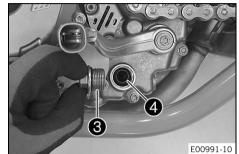

#### Main work

- Place a suitable container under the engine.
- Remove oil drain plug with the magnet and seal ring.

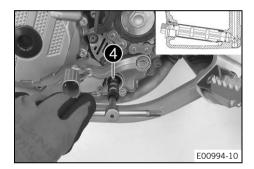

#### Info

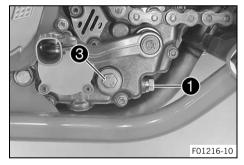

Do not remove screws **2**.

- Remove screw plug 3 with oil screen 4 and the O-rings.
- Completely drain the engine oil.
- Thoroughly clean the parts and sealing surfaces.

- Position oil screen 4 with the O-rings on a pin wrench.
- Position the pin wrench through the drill hole of the screw plug in the opposite section of the engine case.
- Push the oil screen all the way into the engine case.

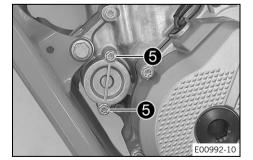

Mount and tighten screw plug 3 with the O-ring.
 Guideline

Screw plug, oil	M20x1.5	15 Nm (11.1 lbf ft)
screen		

 Mount and tighten oil drain plug with the magnet and a new seal ring.

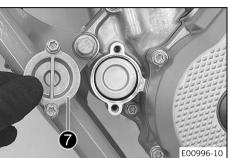

## Guideline

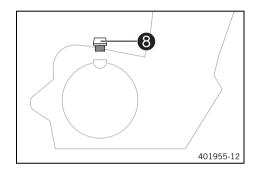

Oil drain plug with	M12x1.5	20 Nm (14.8 lbf ft)
magnet		

Remove screws **5**. Remove the oil filter cover with the O-ring.

Pull oil filter 6 out of the oil filter housing.

Lock ring plier (51012011000)

- Completely drain the engine oil.
- Thoroughly clean the parts and sealing surfaces.
- Lay the motorcycle on its right side and fill the oil filter housing approx. ¼ full with engine oil.
- Place the oil filter into the oil filter housing.
- Oil the O-ring of the oil filter cover and mount it together with oil filter cover 7.
- Mount and tighten the screws.

Guideline

Screw, oil filter cover M6 10 Nm (7.4 lbf
---

- Stand the motorcycle upright.
- Remove filler plug **8** from the clutch cover together with the O-ring, and fill up with engine oil.

Engine oil	1.0 l (1.1 qt.)	Engine oil
		(SAE 10W/50)
		(🕮 p. 144)

#### Info

Too little engine oil or poor-quality engine oil will result in premature wear of the engine.

- Mount and tighten the filler plug together with the O-ring.

# **Danger**

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.
- Start the engine and check that it is oil-tight.

#### **Finishing work**

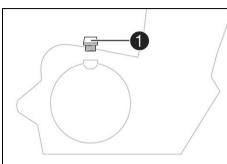

- Install the engine guard. (🕮 p. 83)
- Check the engine oil level. (
  p. 123)

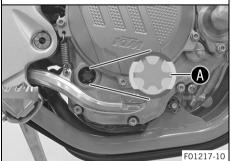

# 18.4 Adding engine oil

#### Info

Too little engine oil or poor-quality engine oil will result in premature wear of the engine.

#### Main work

- Remove oil filler plug with the O-ring from the clutch cover.
- Fill engine oil to the middle f A of the level viewer.

Engine oil (SAE 10W/50) (🕮 p. 144)

#### Info

In order to achieve optimal engine performance, it is not advisable to mix different engine oils. We recommended changing the engine oil when necessary.

- Mount and tighten the filler plug together with the O-ring.

## **Danger**

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.
- Start the engine and check that it is oil-tight.

#### **Finishing work**

•

# 19.1 Cleaning the motorcycle

#### Note

Material damage Components become damaged or destroyed if a pressure cleaner is used incorrectly.

The high pressure forces water into the electrical components, connectors, throttle cables, and bearings, etc. Pressure which is too high causes malfunctions and destroys components.

- Do not direct the water jet directly on to electrical components, connectors, throttle cables or bearings.
- Maintain a minimum distance between the nozzle of the pressure cleaner and the component.
   Minimum clearance
   60 cm (23.6 in)

#### Warning

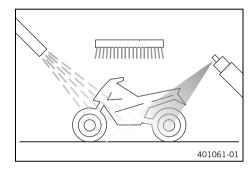

**Environmental hazard** Hazardous substances cause environmental damage.

- Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

#### Info

If you clean the motorcycle regularly, its value and appearance will be maintained over a long period. Avoid direct sunshine on the motorcycle during cleaning.

- Close off the exhaust system to keep water from entering.
- First remove coarse dirt particles with a gentle spray of water.
- Spray very dirty areas with a normal motorcycle cleaner and then clean with a paintbrush.

Motorcycle cleaner (🕮 p. 146)

#### Info

Use warm water containing normal motorcycle cleaner and a soft sponge.

Never apply motorcycle cleaner to the dry vehicle; always rinse with water first.

- After rinsing the motorcycle with a gentle spray of water, allow it to dry thoroughly.
- Remove the plug from the exhaust system.

#### Warning

**Danger of accidents** Moisture and dirt impair the brake system.

- Brake carefully several times to dry out and remove dirt from the brake linings and the brake discs.
- After cleaning, ride a short distance until the engine reaches operating temperature.

#### Info

The heat produced causes water at inaccessible locations in the engine and the brake system to evaporate.

- After the motorcycle has cooled off, lubricate all moving parts and bearings.

 Treat bare metal parts (except for the brake discs and exhaust system) with anti-corrosion materials.

Preserving materials for paints, metal and rubber (@ p. 146)

 Treat all plastic parts and powder-coated parts with a mild cleaning and care product.

- Oil the steering lock.

Universal oil spray (🕮 p. 147)

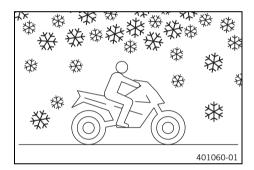

# 19.2 Checks and maintenance steps for winter operation

# Info

If the motorcycle is used in the winter, salt can be expected on the roads. Precautions need to be taken against road salt corrosion.

If the vehicle was operated in road salt, clean it with cold water after riding. Warm water would enhance the corrosive effects of salt.

- Clean the brake system.

#### Info

After **EVERY** trip on salted roads, thoroughly wash the brake calipers and brake linings with cold water and dry carefully. This should be done after the parts are cooled down and while they are installed.

After riding on salted roads, thoroughly wash the motor-cycle with cold water and dry it well.

 Treat the engine, swingarm, and all other bright and zincplated parts (except for the brake discs) with a wax-based corrosion inhibitor.

## Info

Corrosion inhibitor is not permitted to come in contact with the brake discs as this would greatly reduce the braking force.

- Clean the chain. (
p. 74)

# 20.1 Storage

## Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

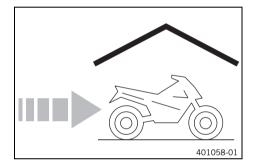

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.
- Keep fuels correctly in a suitable canister, and out of the reach of children.

#### Info

If you want to garage the motorcycle for a longer period, take the following steps.

Before storing the motorcycle, check all parts for function and wear. If service, repairs or replacements are necessary, you should do this during the storage period (less workshop overload). In this way, you can avoid long workshop waiting times at the start of the new season.

 When refueling for the last time before taking the motorcycle out of service, add fuel additive.

Fuel additive (🕮 p. 146)

- Change the engine oil and oil filter, clean the oil screen. 
   (□ p. 123)
- Check the antifreeze and coolant level. ( p. 112)
- Remove the battery. 🔏 (🕮 p. 101)

Guideline

Storage temperature of battery without direct sunlight 0 ... 35 °C (32 ... 95 °F)

- Store the vehicle in a dry location that is not subject to large fluctuations in temperature.

## Info

KTM recommends raising the motorcycle.

- Cover the motorcycle with a porous sheet or blanket. Do not use non-porous materials since they prevent humidity from escaping, thus causing corrosion.

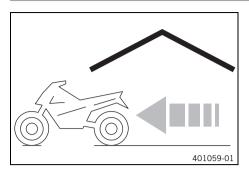

#### Info

Avoid running the engine for a short time only. Since the engine cannot warm up properly, the water vapor produced during combustion condenses and causes valves and exhaust system to rust.

•

# 20.2 Preparing for use after storage

- Remove the motorcycle from the lift stand. (

  p. 53)
- Install the battery. ◄ (🕮 p. 102)
- Perform checks and maintenance measures when preparing for use. (♠ p. 37)
- Take a test ride.

	Piston or cylinder worn	<ul> <li>Measure the piston/cylinder mounting clearance. ◀</li> </ul>
Battery is discharged	Battery is not being charged by alternator	<ul> <li>Check the charging voltage. </li> <li>Check the stator winding of the alternator. </li> </ul>
	Unwanted power consumer	<ul> <li>Check the open-circuit current. ◄</li> </ul>
	<u> </u>	<u> </u>

Faults	Possible cause	Action
Combination instrument values deleted (time, stop watch, lap times)	The battery in the combination instrument is discharged	<ul> <li>Change the combination instrument.</li> <li>(♠ p. 110)</li> </ul>
The high beam, low beam, parking light, tail light, and license plate lamp are not working	Fuse 2 blown	<ul> <li>Change the fuses of individual power consumers. (♠ p. 105)</li> </ul>
The horn, turn signal, brake light and radiator fan are not working	Fuse 3 blown	- Change the fuses of individual power consumers. (♠ p. 105)

# Info

The blink codes are only displayed by the derestricted version of the vehicle.

Blink code for malfunction indicator lamp	<b>₽</b>
	O2a Malfunction indicator lamp flashes 2x per second
Error level condition	Teaching of throttle valve position required
Blink code for malfunction indicator lamp	们 02 Malfunction indicator lamp flashes 2x short
Error level condition	Crankshaft position sensor - circuit fault
Blink code for malfunction indicator lamp	06 Malfunction indicator lamp flashes 6x short
Error level condition	Throttle position sensor circuit A - input signal too low
	Throttle position sensor circuit A - input signal too high
Blink code for malfunction indicator lamp	り 09 Malfunction indicator lamp flashes 9x short
Error level condition	Manifold absolute pressure sensor cylinder 1 - input signal too low
	Manifold absolute pressure sensor cylinder 1 - input signal too high
Blink code for malfunction indicator lamp	12 Malfunction indicator lamp flashes 1x long, 2x short
Error level condition	Engine coolant temperature sensor - input signal too low
	Engine coolant temperature sensor - input signal too high
Blink code for malfunction indicator lamp	13 Malfunction indicator lamp flashes 1x long, 3x short
Error level condition	Intake air temperature sensor - input signal too low
	Intake air temperature sensor - input signal too high
Blink code for malfunction indicator lamp	15 Malfunction indicator lamp flashes 1x long, 5x short
Error level condition	Rollover sensor (A/D type) - input signal too low
	Rollover sensor (A/D type) - input signal too high
Blink code for malfunction indicator lamp	行 21 Malfunction indicator lamp flashes 2x long, 1x short
Error level condition	Battery voltage – input voltage too high

Blink code for malfunction indicator lamp	
<b>-</b>	22 Malfunction indicator lamp flashes 2x long, 2x short
Error level condition	Gear position sensor – input voltage too high
	Gear position sensor – input voltage too low
Blink code for malfunction indicator lamp	33 Malfunction indicator lamp flashes 3x long, 3x short
Error level condition	Injector cylinder 1 - circuit fault
Blink code for malfunction indicator lamp	37 Malfunction indicator lamp flashes 3x long, 7x short
Error level condition	Ignition coil 1, cylinder 1 - circuit fault
Blink code for malfunction indicator lamp	41 Malfunction indicator lamp flashes 4x long, 1x short
Error level condition	Fuel pump relay - short circuit to ground or open circuit
	raci pamp rolay short or out to ground or opon chourt

### Brake fluid DOT 4 / DOT 5.1

#### Standard/classification

DOT

#### Guideline

 Use only brake fluid that complies with the specified standard (see specifications on the container) and that exhibits the corresponding properties.

#### Recommended supplier

### Castrol

REACT PERFORMANCE DOT 4

#### Motorex®

Brake Fluid DOT 5.1

### Coolant

#### Guideline

- Only use high-grade, silicate-free coolant with corrosion inhibitor additive for aluminum motors. Low grade and unsuitable antifreeze causes corrosion, deposits and frothing.
- Do not use pure water as only coolant is able to meet the requirements needed in terms of corrosion protection and lubrication properties.
- Only use coolant that complies with the requirements stated (see specifications on the container) and that has the relevant properties.

Antifreeze protection to at least
-----------------------------------

The mixture ratio must be adjusted to the necessary antifreeze protection. Use distilled water if the coolant needs to be diluted.

The use of premixed coolant is recommended.

Observe the coolant manufacturer specifications for antifreeze protection, dilution and miscibility (compatibility) with other coolants.

### **Recommended supplier**

### Motorex®

- **COOLANT M3.0** 

### Engine oil (SAE 10W/50)

### Standard/classification

- JASO T903 MA (🕮 p. 148)

#### Guideline

 Use only engine oils that comply with the specified standards (see specifications on the container) and that possess the corresponding properties.

Synthetic engine oil

### **Recommended supplier**

### Motorex®

Cross Power 4T

# Fork oil (SAE 4) (48601166S1)

### Standard/classification

- SAE (🕮 p. 148) (SAE 4)

### Guideline

 Use only oils that comply with the specified standards (see specifications on the container) and that exhibit the corresponding properties.

### Shock absorber fluid (SAE 2.5) (50180751S1)

### Standard/classification

- SAE (@ p. 148) (SAE 2.5)

### Guideline

 Use only oils that comply with the specified standards (see specifications on the container) and that exhibit the corresponding properties.

### Super unleaded (ROZ 95/RON 95/PON 91)

### Standard/classification

DIN EN 228 (ROZ 95/RON 95/PON 91)

### Guideline

- Only use unleaded super fuel that matches or is equivalent to the specified fuel grade.
- Fuel with an ethanol content of up to 10 % (E10 fuel) is safe to use.

### Info

Do **not** use fuel containing methanol (e. g. M15, M85, M100) or more than 10 % ethanol (e. g. E15, E25, E85, E100).

# **JASO T903 MA**

Different technical development directions required a separate specification for motorcycles – the **JASO T903 MA** standard.

Earlier, engine oils from the automobile industry were used for motorcycles because there was no separate motorcycle specification.

Whereas long service intervals are demanded for automobile engines, the focus for motorcycle engines is on high performance at high engine speeds.

In most motorcycle engines, the transmission and clutch are lubricated with the same oil.

The JASO MA standard meets these special requirements.

# SAE

The SAE viscosity classes were defined by the Society of Automotive Engineers and are used for classifying oils according to their viscosity. The viscosity describes only one property of oil and says nothing about quality.

# 29.1 Yellow and orange symbols

Yellow and orange symbols indicate an error condition that requires prompt intervention. Active driving aids are also represented by yellow or orange symbols.

<b>T</b>	Malfunction indicator lamp lights up/flashes yellow – The OBD has detected an error in the vehicle electronics. Come safely to a halt, and contact an authorized KTM workshop.
<b>₽</b> 3	The fuel level warning lamp lights up yellow – The fuel level has reached the reserve mark.

# 29.2 Green and blue symbols

Green and blue symbols reflect information.

<b>≣</b> O	The high beam indicator lamp lights up blue – The high beam is switched on.
( <del>+</del> + <del>+</del> )	Turn signal indicator lamp flashes green – The turn signal is switched on.
