# **OWNER'S MANUAL 2010**

250 EXC-F EU 250 EXC-F AUS 250 EXC-F SIX DAYS EU 250 XCF-W ZA 250 SX-F EU 250 SX-F USA

Art. no. 3211465en

## **DEAR KTM CUSTOMER**

Congratulations on your decision to purchase a KTM motorcycle. You are now the owner of a state-of-the-art sports motorcycle that will give you enormous pleasure if you service and maintain it accordingly.

We wish you a lot of enjoyment riding this vehicle!

Enter the serial numbers of your vehicle below.

Chassis number (  p. 10)	Dealer's stamp
Engine number (🕶 p. 10)	
Key number (EXC-F, EXC-F SIX DAYS) (🕈 p. 10)	

The owner's manual corresponded to the latest state of this series at the time of printing. Slight deviations resulting from continuing development and design of our motorcycles can however not be completely excluded.

All specifications are non-binding. KTM Sportmotorcycle AG specifically reserves the right to modify or delete technical specifications, prices, colors, forms, materials, services, designs, equipment, etc., without prior notice and without specifying reasons, to adapt these to local conditions, as well as to stop production of a particular model without prior notice. KTM accepts no liability for delivery options, deviations from illustrations and descriptions, as well as misprints and other errors. The models portrayed partly contain special equipment that does not belong to the regular scope of delivery.

## **IMPORTANT INFORMATION**

#### Use definition (EXC-F, EXC-F SIX DAYS)

KTM sport motorcycles are designed and built to withstand the normal stresses and strains of competitive use. The motorcycles comply with currently valid regulations and categories of the top international motorsport organizations.

### e Info

The motorcycle is authorized for public road traffic in the homologous (reduced) version only. In the derestricted version, the motorcycle must be used only on closed off property remote from public road traffic. The motorcycle is designed for off-road sport endurance competition (Enduro) and not for the use predominantly in motocross.

#### Use definition (XCF-W, SX-F)

KTM sport motorcycles are designed and built to withstand the normal stresses and strains of competitive use. The motorcycles comply with currently valid regulations and categories of the top international motorsport organizations.

#### • Info

The motorcycle must be used only on secluded property remote from public road traffic.

#### Maintenance

A prerequisite for trouble free operation and avoiding premature wear is that the engine and suspension are maintained and adjusted as described in this manual. Poor adjustment and tuning of the engine and suspension can lead to damage and breakage of components.

Using a motorcycle in difficult conditions such as on sand or very wet and muddy ground can lead to excessive wear of components such as the power train or brakes. For this reason, it may be necessary to service or replace worn parts before the limit specified in the service schedule is reached.

Pay careful attention to the prescribed running-in period, inspection and maintenance intervals. Observing these rules will vastly increase the service life of your motorcycle.

#### Warranty

The work prescribed in the service schedule must be carried out by an authorized KTM workshop only and confirmed in the customer's service record; otherwise, all warranty claims will be void. No warranty claim can be honored for damage resulting from manipulation and/or other changes to the vehicle.

#### Fuel, oils, etc.

You should use the fuels, oils and greases according to specifications as listed in the owner's manual.

#### Spare parts, accessories

For your own safety, only use spare parts and accessory products that have been approved and/or recommended by KTM and have them installed by an authorized KTM workshop. KTM accepts no liability for other products and any resulting damage or loss. Some spare parts and accessories are specified in brackets in the respective descriptions. Your KTM dealer will be happy to advise you.

You will find the current **KTM PowerParts** for your vehicle on the KTM website. International KTM Website: http://www.ktm.com

#### **Work rules**

Special tools are necessary for some of the work. These are not included with the vehicle and can be ordered under the number in parentheses. Ex: valve spring compressor (59029019000)

During assembly, non-reusable parts (e.g. self-locking screws and nuts, seals and seal rings, O-rings, pins, lock washers) must be replaced by new parts.

If thread lock (e.g. **Loctite**<sup>®</sup>) is used for screw connections, be sure to comply with the manufacturer's specific instructions on its usage.

Parts that you want to reuse following repairs and servicing should be cleaned and checked for damage and wear. Change damaged or worn parts.

Following repairs or servicing, the vehicle must be checked for roadworthiness.

## **IMPORTANT INFORMATION**

#### **Transport**

#### Note

- Danger of damage The parked vehicle can roll away or fall over.
- Always place the vehicle on a firm and even surface.

#### Note

Fire hazard Some vehicle components become very hot when the vehicle is operated.

- Do not park the vehicle near flammable or explosive substances. Do not place objects on the vehicle while it is still warm from being run. Always let the vehicle cool first.
- Switch off the engine.

#### (EXC-F, EXC-F SIX DAYS, XCF-W)

- Turn handle **0** of the fuel tap to the **OFF** position. (Figure 500137-10 **\*** p. 22)

#### (SX-F)

- Turn handle **0** of the fuel tap to the **OFF** position. (Figure 500178-10 **\*** p. 22)
- Use straps or other suitable devices to secure the motorcycle against accidents or falling over.

#### Environment

Motorcycling is a wonderful sport and we naturally hope that you can enjoy it to the full. However, it is a potential problem for the environment and can lead to conflicts with other persons. But if you use your motorcycle responsibly, you can ensure that such problems and conflicts do not have to occur. To protect the future of motorcycle sport, make sure that you use your motorcycle legally, display environmental consciousness, and respect the rights of others.

#### **Notes/warnings**

Pay close attention to the notes/warnings.

#### • Info Vario

Various information and warning labels are affixed to the vehicle. Do not remove information/warning labels. If they are missing, you or others may not recognize potential hazards and may therefore be injured.

#### **Grades of risks**

#### **Danger**

Identifies a danger that will immediately and invariably lead to fatal or serious permanent injury if the appropriate measures are not taken.

#### Warning

Identifies a danger that is likely to lead to fatal or serious injury if the appropriate measures are not taken.

#### Note

Identifies a danger that will lead to considerable machine and material damage if the appropriate measures are not taken.

## Warning

Identifies a danger that will lead to environmental damage if the appropriate measures are not taken.

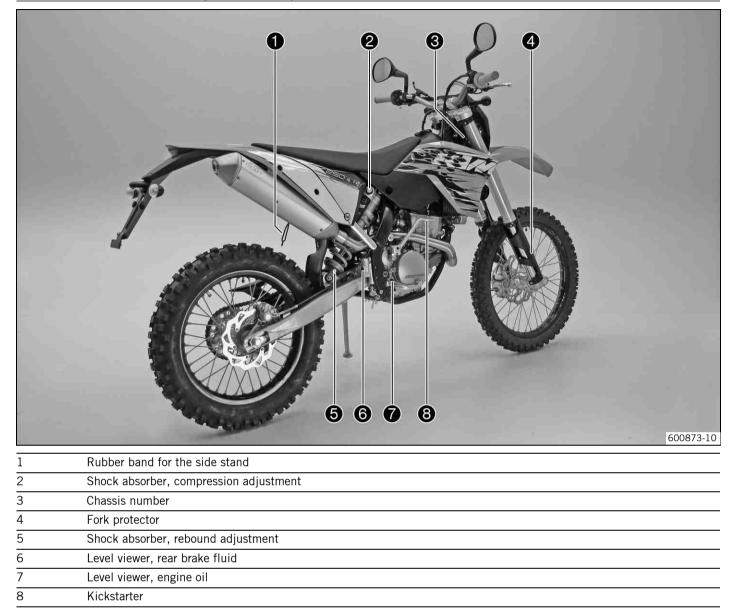

#### **Owner's manual**

- It is important that you read this owner's manual carefully and completely before making your first trip. It contains useful information and many tips on how to operate and handle your motorcycle. Only then will you find out how to best customize the motorcycle for your own use and how you can protect yourself from injury. The owner's manual also contains important information on servicing the motorcycle.
- The owner's manual is an important component of the motorcycle and should be handed over to the new owner if the vehicle is sold.

## View of the vehicle from the left front (example)

## View of the vehicle from the right rear (example)

## LOCATION OF SERIAL NUMBERS

### **Chassis number**

The chassis number **1** is stamped on the steering head on the right.

Type label

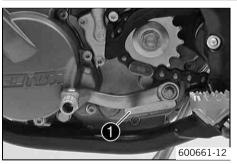

The type label **1** is fixed to the front of the steering head.

Key number (EXC-F, EXC-F SIX DAYS)

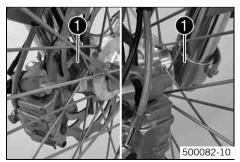

The key number **1** is stamped on the key strap.

### **Engine number**

The engine number **1** is stamped on the left side of the engine under the engine sprocket.

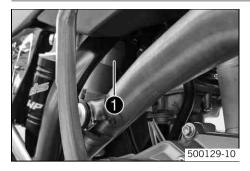

## Fork part number

The fork part number **1** is stamped on the inner side of the fork stub.

## LOCATION OF SERIAL NUMBERS

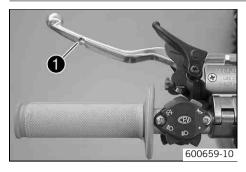

## Shock absorber part number

The shock absorber part number  $\bullet$  is stamped on the top of the shock absorber above the adjusting ring on the engine side.

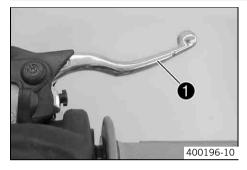

## **CONTROLS**

#### **Clutch lever**

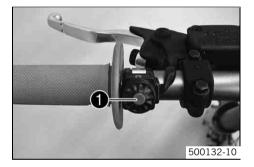

The clutch lever **1** is fitted on the left side of the handlebar. The clutch is hydraulically operated and self-adjusting.

Hand brake lever

#### Short circuit button (XCF-W, SX-F)

Hand brake lever **1** is located on the right side of the handlebar. The hand brake lever is used to activate the front brake.

The short circuit button  $\ensuremath{f 0}$  is fitted on the left side of the handlebar.

#### Possible states

- Short circuit button ⊗ in basic position In this position, the ignition circuit is closed, and the engine can be started.
- Short circuit button ⊗ pressed In this position, the ignition circuit is interrupted, a running engine stops, and a non-running engine will not start.

Short circuit button (EXC-F, EXC-F SIX DAYS)

The short circuit button **1** is fitted on the left side of the handlebar.

#### **Possible states**

- Short circuit button ⊗ in basic position In this position, the ignition circuit is closed, and the engine can be started.
- Short circuit button ⊗ pressed In this position, the ignition circuit is interrupted, a running engine stops, and a non-running engine will not start.

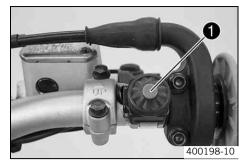

### **Emergency OFF switch (EXC-F AUS)**

The emergency OFF switch  ${\color{black}\bullet}$  is fitted on the right side of the handlebar.

Possible states	
$\bigotimes$	Ignition off – In this position, the ignition circuit is interrupted, a run- ning engine stops, and a non-running engine will not start.
$\bigcirc$	Ignition on – In this position, the ignition circuit is closed, and the engine can be started.

### Electric starter button (EXC-F EU, EXC-F SIX DAYS, XCF-W)

The electric starter button **1** is fitted on the right side of the handlebar.

#### **Possible states**

- Electric starter button (3) in basic position
- Electric starter button ③ pressed In this position, the electric starter is actuated.

#### **Electric starter button (EXC-F AUS)**

The electric starter button  $\bullet$  is fitted on the right side of the handlebar.

#### **Possible states**

- Electric starter button (3) in basic position
- Electric starter button ③ pressed In this position, the electric starter is actuated.

Light switch (EXC-F, EXC-F SIX DAYS)

The light switch **①** is fitted on the left side of the handlebar.

#### Possible states

•	Light off – Light switch is turned to the right. In this position, the light is switched off.
≣D	Low beam on – Light switch is in the central position. In this position, the low beam and tail light are switched on.
ED	High beam on – Light switch is turned to the left. In this position, the high beam and the tail light are switched on.

### Horn button (EXC-F, EXC-F SIX DAYS)

The horn button **1** is fitted on the left side of the handlebar.

#### **Possible states**

....

- Horn button ₩ in neutral position
- Horn button  $\leftarrow$  pressed The horn is operated in this position.

### Turn signal switch (EXC-F, EXC-F SIX DAYS)

Turn signal switch  ${\ensuremath{\bullet}}$  is fitted on the left side of the handlebar.

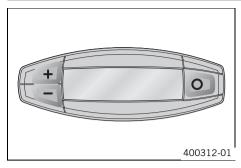

Possible states	
	Turn signal light off – Turn signal switch is in the central position.
+	Turn signal light, left, on – Turn signal switch turned to the left.
	Turn signal light, right, on – Turn signal switch turned to the right.

## **Overview of indicator lamps (EXC-F, EXC-F SIX DAYS)**

## 

Possible states	
	High beam indicator lamp lights up blue – High beam is switched on.
	Turn signal indicator lamp flashes green – Turn signal light is switched on.

#### Speedometer

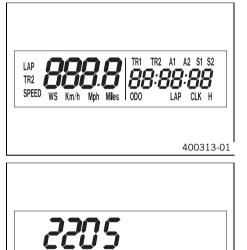

- Press the key  $\Box$  to change the display mode or change to one of the setup menus.
  - Press the button  $\pm$  to control different functions.
- Press the button to control different functions.

Info

\_

In its condition at delivery, the display mode **SPEED/H** and **SPEED/ODO** is activated.

#### **Speedometer activation and test**

#### Activating the speedometer:

The speedometer is activated when one of the keys is pressed or a signal is received from the wheel speed sensor. Display test

For the function test of the display, all display segments light up briefly.

## WS (wheel size)

After the display function test, the wheel size **WS** is displayed briefly.

## Info

2205 mm corresponds to the size of the 21" front wheel with a series production tire.

The display then changes to the last selected mode.

400314-01

#### **Tripmaster switch**

#### (Option: Tripmaster switch)

You can use the trip master switch to control the functions of the speedometer from the handlebar.

The trip master is an optional accessory.

#### Setting kilometers or miles

linfo

If you change the unit of measure, the **ODO** value is retained and converted accordingly. The values **TR1**, **TR2**, **A1**, **A2** and **S1** are cleared when the unit of measure is changed.

## 

#### Condition

The motorcycle is stationary.

- Press the button O briefly and repeatedly until H appears at the bottom right of the display.
- Press the button 🖸 for 3 5 seconds.
  - $\checkmark$  The Setup menu opens and the active functions are displayed.
- Press the button **O** repeatedly until the **Km/h/Mph** display flashes.

### Adjusting Km/h

Press the button +.

#### Adjusting Mph

Press the button —.

<sup>•</sup> Info

- Press the button O for 3 5 seconds.
  - ✓ The settings are saved and the Setup menu closed.

#### Info

If no button is pressed for 20 seconds, or if no impulse comes from the wheel speed sensor, the settings are automatically saved and the Setup menu is closed.

#### Setting the clock

#### Condition

The motorcycle is stationary.

- Press the button O briefly and repeatedly until **CLK** appears at the bottom right of the display.
- Press the button  $\Box$  for 3 5 seconds.
- The hour display flashes.
- Set the hour display with the button  $\pm$  and/or button  $\equiv$ .
- Press the button 🖸 briefly.
  - $\checkmark$  The next segment of the display flashes and can be set.

Info

The seconds can only be set to zero.

Press the button O for 3 - 5 seconds.

The settings are saved and the Setup menu closed.

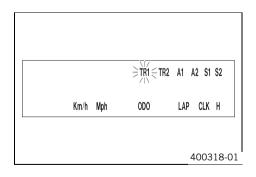

#### lnfo

If no button is pressed for 20 seconds, or if no impulse comes from the wheel speed sensor, the settings are automatically saved and the Setup menu is closed.

#### Adjusting the speedometer functions

Info

Upon delivery, only the SPEED/H and SPEED/ODO display modes are activated.

#### Condition

The motorcycle is stationary.

- Press the button <sup>♥</sup> briefly and repeatedly until **H** appears at the bottom right of the display.
- Press the button O for 3 5 seconds.
- ✓ The Setup menu opens and the active functions are displayed.
- Switch to the function you require by briefly pressing the button O.
  - The selected function flashes.

#### Activating a function

- Press the button +.
  - $\checkmark\,$  The icon remains in the display and the display changes to the next function.

#### Deactivating a function

- Press the button —.
  - The icon disappears from the display and the display changes to the next function.
- Activate or deactivate all functions accordingly.
- Press the button 🖸 for 3 5 seconds.
  - ✓ The settings are saved and the Setup menu closed.

### Info

If no button is pressed for 20 seconds, or if no impulse comes from the wheel speed sensor, the settings are automatically saved and the Setup menu is closed.

### **Querying the lap time**

Info

This function can be called only if lap times are measured.

#### Condition The motorcycle is stationary. Press the button O briefly and repeatedly until LAP appears at the bottom right of the display. Press the button O briefly. ✓ LAP 1 appears on the left side of the display. LAP Laps 1-10 can be displayed by pressing the button $\pm$ . The button has no function Press the button O briefly. Next display mode 400321-01 Info

### SPEED display mode (speed)

Press the button O briefly and repeatedly until SPEED appears on the left side of the display.

If an impulse is received from the wheel speed sensor, the left side of the

The current speed is displayed in the SPEED display mode. The current speed can be displayed in Km/h or Mph.

display changes back to the SPEED mode.

#### Info

Making the setting according to the country. When an impulse comes from the front wheel, the left side of the speedometer display changes to the SPEED mode and the current speed is shown.

#### **Display mode SPEED/H (service hours)**

Condition

- The motorcycle is stationary
- Press the button O briefly and repeatedly until **H** appears at the bottom right of the display.

In display mode **H**, the service hours of the engine are displayed.

The service hour counter stores the total traveling time.

#### Info

The service hour counter is necessary for ensuring that maintenance work is carried out at the right intervals.

If the speedometer is in **H** display mode at the start of the journey, it automatically changes to the **ODO** display mode.

The **H** display mode is suppressed during the journey.

Press the button $\pm$ .	No function
Press the button –.	No function
Press the button <b>O</b> for 3 - 5 seconds.	The display changes to the Setup menu of the speedometer functions.
Press the button O briefly.	Next display mode

\_

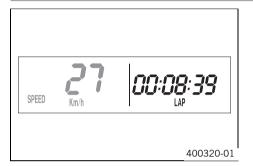

#### **Display mode SPEED/CLK (clock)**

Press the button O briefly and repeatedly until CLK appears at the bottom right of the display. The time is displayed in **CLK** display mode.

Press the button $\pm$ .	No function
Press the button	No function
Press the button <b>O</b> for 3 - 5 seconds.	The display changes to the Setup menu of the clock.
Press the button O briefly.	Next display mode

### **Display mode SPEED/LAP (lap time)**

Press the button O briefly and repeatedly until LAP appears at the bottom right of the display.

In the **LAP** display mode, up to 10 lap times can be timed with the stop watch.

If the lap time continues after you press the button -, 9 memory locations are already occupied.

Lap 10 must be timed with the button  $\pm$ .

Press the button $\pm$ .	Starts or stops the clock.
Press the button .	Stops the current lap time and saves it, and the stop watch starts the next lap.
Press the button $\mathbf{O}$ for 3 - 5 seconds.	The stop watch and the lap time are reset.
Press the button O briefly.	Next display mode

### **Display mode SPEED/ODO (odometer)**

SPEED Km/h 000 638
--------------------

Press the button O briefly and repeatedly until ODO appears at the bottom right of \_ the display.

In **ODO** display mode, the total number of kilometers ridden is displayed.

Press the button $\pm$ .	No function
Press the button	No function
Press the button <b>O</b> for 3 - 5 seconds.	-
Press the button O briefly.	Next display mode

### Display mode SPEED/TR1 (trip master 1)

SPEED Km/h			TR1	10	20	3.3	
------------	--	--	-----	----	----	-----	--

Press the button O briefly and repeatedly until TR1 appears at the top right of the \_ display.

TR1 (trip master 1) runs constantly and counts up to 999.9.

You can use it to measure trips or the distance between refuelling stops.

TR1 is coupled with A1 (average speed 1) and S1 (stop watch 1).

If 999.9 is exceeded, the values of TR1, A1 and S1 are automaticallt reset to 0.0.

Press the button $+$ .	No function
Press the button	No function
Press the button <b>O</b> for 3 - 5 seconds.	Displays of <b>TR1</b> , <b>A1</b> and <b>S1</b> are reset to 0,0.

Press the button **O** Next display mode briefly.

#### **Display mode SPEED/TR2 (trip master 2)**

Press the button O briefly and repeatedly until **TR2** appears at the top right of the display.

**TR2** (trip master 2) runs constantly and counts up to 999.9. The displayed value can be set manually with the button + and the button -. A very practical function when riding using the road book.

#### Info

The **TR2** value can also be corrected manually during the journey with the button + and the button -.

If 999.9 is exceeded, the value of **TR2** is automatically reset to 0.0.

Press the button $\pm$ .	Increases value of TR2.
Press the button	Reduces value of TR2.
Press the button $\bigcirc$ for 3 - 5 seconds.	Deletes value of <b>TR2</b> .
Press the button O briefly.	Next display mode

#### Disply mode SPEED/A1 (average speed 1)

Press the button O briefly and repeatedly until A1 appears at the top right of the display.

**A1** (average speed 1) shows the average speed calculated using **TR1** (trip master 1) and **S1** (stop watch 1).

The calculation of this value is activated by the first impulse of the wheel speed sensor and ends 3 seconds after the last impulse.

Press the button $\pm$ .	No function
Press the button	No function
Press the button <b>O</b> for 3 - 5 seconds.	Displays of <b>TR1</b> , <b>A1</b> and <b>S1</b> are reset to 0,0.
Press the button O briefly.	Next display mode

#### **Display mode SPEED/A2 (average speed 2)**

Press the button O briefly and repeatedly until A2 appears at the top right of the display.

**A2** (average speed 2) shows the average speed on the basis of the current speed if the stop watch **S2** (stop watch 2) is running.

#### lnfo

The displayed value can differ from the actual average speed if **\$2** was not timed after the ride.

Press the button $\pm$ .	No function
Press the button	No function
Press the button <b>O</b> for 3 - 5 seconds.	-
Press the button O briefly.	Next display mode

\_

### Display mode SPEED/S1 (stop watch 1)

*00: 18:52* ĺ SPEED Km/h

400327-01

Press the button **O** briefly and repeatedly until **S1** appears at the top right of the display.

**S1** (stop watch 1) displays the journey time on the basis of **TR1** and continues when an impulse is received from the wheel speed sensor.

The calculation of this value starts with the first impulse of the wheel speed sensor and ends 3 seconds after the last impulse.

Press the button $\pm$ .	No function
Press the button	No function
Press the button <b>O</b> for 3 - 5 seconds.	Displays of <b>TR1</b> , <b>A1</b> and <b>S1</b> are reset to 0,0.
Press the button O briefly.	Next display mode

#### **Display mode SPEED/S2 (stop watch 2)**

Press the button O briefly and repeatedly until S2 appears at the top right of the display.

**\$2** (stop watch 2) is a manual stop watch.

If **S2** is running in the background, the **S2** display flashes in the speedometer display.

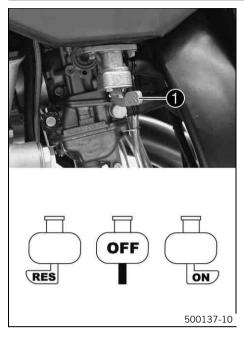

Press the button $\pm$ .	Starts or stops S2.
Press the button	No function
Press the button <b>O</b> for 3 - 5 seconds.	Displays of <b>S2</b> and <b>A2</b> are reset to 0.0.
Press the button O briefly.	Next display mode

### Fuel tap (EXC-F, EXC-F SIX DAYS, XCF-W)

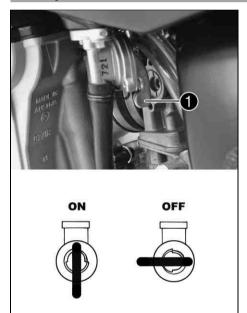

The fuel tap is on the left side of the fuel tank.

Using tap handle  $\bullet$  on the fuel tap, you can open or close the supply of fuel to the carburetor.

#### **Possible states**

- Fuel supply closed **OFF** No fuel can flow from the tank to the carburetor.
- Fuel supply open **ON** Fuel can flow from the tank to the carburetor. The fuel tank empties down to the reserve.
- Reserve fuel supply open **RES** Fuel can flow from the tank to the carburetor. The fuel tank empties completely.

### Fuel tap (SX-F)

500178-10

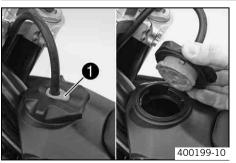

#### The fuel tap is on the left side of the fuel tank.

Using tap handle  ${\bf 0}$  on the fuel tap, you can open or close the supply of fuel to the carburetor.

#### **Possible states**

- Fuel supply closed **OFF** No fuel can flow from the tank to the carburetor.
- Fuel supply open **ON** Fuel can flow from the tank to the carburetor. The fuel tank empties completely.

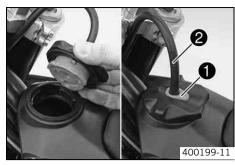

### **Opening filler cap**

Press release button **1**, turn filler cap counterclockwise and lift it upwards and remove.

## **CONTROLS**

### **Closing filler cap**

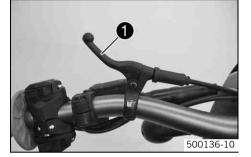

Replace the filler cap and turn clockwise until the release button **1** locks in place.

\_

Route the fuel tank breather hose 2 without kinking.

Choke (EXC-F EU, EXC-F SIX DAYS)

The choke lever ① is fitted on the left side of the handlebar. Activating the choke function frees an opening through which the engine can draw extra fuel. This gives a richer fuel-air mixture, which is needed for a cold start.

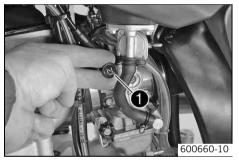

#### Info

If the engine is warm, the choke function must be deactivated.

#### **Possible states**

- Choke function activated The choke lever is pulled to the stop.
- Choke function deactivated The choke lever is pushed back to the stop.

## Choke (XCF-W, SX-F, EXC-F AUS)

## Choke **1** is fitted on the left side of the carburetor.

Activating the choke function frees an opening through which the engine can draw extra fuel. This gives a richer fuel-air mixture, which is needed for a cold start.

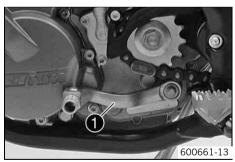

#### Info

If the engine is warm, the choke function must be deactivated.

#### Possible states

- Choke function activated The choke lever is pulled out to the stop.
- Choke function deactivated The choke lever is pushed in to the stop.

### Shift lever

 Shift lever **1** is mounted on the left side of the engine.

The gear positions can be seen in the photograph. The neutral or idle position is between the first and second gears.

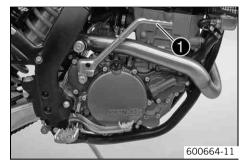

## **CONTROLS**

#### Foot brake lever

Foot brake lever **1** is located in front of the right footrest. The foot brake lever is used to activate the rear brake.

**Kick starter** 

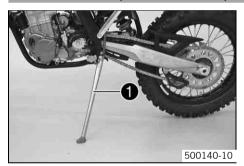

The kick starter ① is fitted on the right of the engine. The engine can be started with either the kick starter or the electric starter. The upper part of the kick starter can be swung out.

Before riding, swing the upper part of the kick starter inwards towards the engine.

#### Side stand (EXC-F, EXC-F SIX DAYS, XCF-W)

#### Note

Danger of damage The parked vehicle can roll away or fall over.

- Always place the vehicle on a firm and even surface.

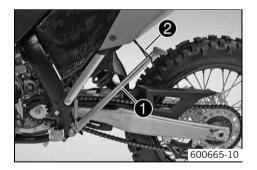

#### Note

Material damage Damage and destruction of components by excessive load.

 The side stand is designed for the weight of the motorcycle only. Do not sit on the motorcycle when it is supported by the side stand only. The side stand and/or the frame could be damaged and the motorcycle could fall over.

To park the motorcycle, press the side stand  $\bullet$  to the ground with your foot and lean the motorcycle on it.

When you are riding, the side stand ① must be folded up and secured with the rubber band @.

Plug-in stand (SX-F)

#### Note

Danger of damage The parked vehicle can roll away or fall over.

- Always place the vehicle on a firm and even surface.

To park the motorcycle, insert plug-in stand **1** into the left side of the wheel spindle.

Remove the plug-in stand before starting on a trip.

### Steering lock (EXC-F, EXC-F SIX DAYS)

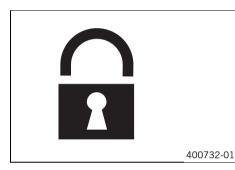

Steering lock **1** is fitted on the left side of the steering head. The steering lock is used to lock the steering. Steering, and therefore riding, is no longer possible.

## Locking the steering (EXC-F, EXC-F SIX DAYS)

#### Note

Danger of damage The parked vehicle can roll away or fall over.

- Always place the vehicle on a firm and even surface.

Park the vehicle.

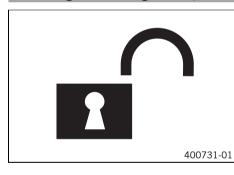

\_

- Turn the handlebar as far as possible to the right.
- Insert the key in the steering lock, turn it to the left, press it in and turn it to the right. Remove the key.
  - ✓ Steering is no longer possible.

Never leave the key in the steering lock.

#### Unlocking the steering (EXC-F, EXC-F SIX DAYS)

- Insert the key in the steering lock, turn it to the left, pull it out and turn it to the right. Remove the key.
  - ✓ You can now steer the bike again.

Never leave the key in the steering lock.

## Danger **Danger of accidents** Danger arising from the rider's judgement being impaired. Do not use the vehicle if you are inexperienced or if you have consumed alcohol or drugs. Warning **Risk of injury** Missing or poor protective clothing present an increased safety risk. Wear protective clothing (helmet, boots, gloves, pants and jacket with protectors) every time you ride the vehicle. Always wear protective clothing, which must be undamaged and meet legal requirements. Warning **Danger of crashing** Poor vehicle handling due to different tire tread patterns on front and rear wheels. The front and rear wheels must be fitted with tires with similar tread patterns to prevent loss of control over the vehicle. Warning Danger of accidents Critical handling characteristic due to inappropriate riding style.

Adapt your riding speed to the road conditoins and your riding ability.

### Warning

Advice on first use

Danger of accidents Accident risk caused by presence of a passenger.

- Your vehicle is not designed to carry passengers. Do not ride with a passenger.

### Warning

Danger of accidents Failure of brake system.

- If the foot brake lever is not released, the brake linings drag permanently. The rear brake can fail due to overheating. Take your foot off the foot brake lever if you do not want to brake.

#### Warning

Warning

Danger of accidents Unstable riding behavior.

Do not exceed the maximum permissible weight and axle loads.

Risk of misappropriation Usage by unauthorized persons.

Never leave the vehicle while the engine is running. Secure the vehicle against use by unauthorized persons.

### Info

When using your motorcycle, remember that others may feel disturbed by excessive noise.

- Make sure that the pre-delivery inspection work has been carried out by an authorized KTM workshop. You receive a delivery certificate and the service record at vehicle handover.
- Before your first trip, read the entire operating instructions carefully.
- Get to know the controls.
- Adjust the basic position of clutch lever. ( p. 83)

(XCF-W, SX-F)

- adjust the basic position of hand brake lever. (\* p. 62)

### (EXC-F, EXC-F SIX DAYS)

- Adjust the free travel of the hand brake lever. (\* p. 62)
- Adjust the basic position of the footbrake lever. 🔌 (🕶 p. 66)
- Adjust the basic position of the shift lever. 🔌 (🕶 p. 84)
- Get used to handling the motorcycle on a suitable piece of land before making a longer trip.

### Info

Offroad, you should be accompanied by another person on another machine so that you can help each other.

- Try also to ride as slowly as possible and in a standing position to get a better feeling for the vehicle.
- Do not make any offroad trips that over-stress your ability and experience.
- Hold the handlebar firmly with both hands and keep your feet on the footrests when riding.

#### (EXC-F, EXC-F SIX DAYS, XCF-W)

 If you carry any baggage, make sure it is fixed firmly as close as possible to the center of the vehicle and ensure even weight distribution between the front and rear wheels.

Motorcycles react sensitively to any changes of weight distribution.

#### (SX-F)

– Do not transport luggage.

- Do not exceed the overall maximum permitted weight and the axle loads.

Guideline

Maximum permissible overall weight	335 kg (739 lb.)
Maximum permissible front axle load	145 kg (320 lb.)
Maximum permissible rear axle load	190 kg (419 lb.)

Check the spoke tension. (\* p. 73)

The spoke tension must be checked after half an hour of operation.

Run the engine in.

#### **Running-in the engine**

- During the running-in phase, do not exceed the specified engine speed and engine performance.

Guideline		
Maximum engine speed		
During the first 3 service hours 7,000 rpm		
Maximum engine performance		
During the first 3 service hours	≤ 50 %	

 During the next 12 service hours
 ≤ 75 %

 Avoid fully opening the throttle!

#### Preparing vehicle for arduous riding conditions

Using a motorcycle in arduous conditions can lead to excessive wear of components such as the power train or brakes. For this
reason, it may be necessary to service or replace worn parts before the limit specified in the service schedule is reached.

#### Arduous riding conditions are:

- Riding on wet and muddy surfaces. (\* p. 29)

#### Preparing for riding on dry sand

Check the radiator cap.

Value on radiator cap1.8 bar (26 psi)

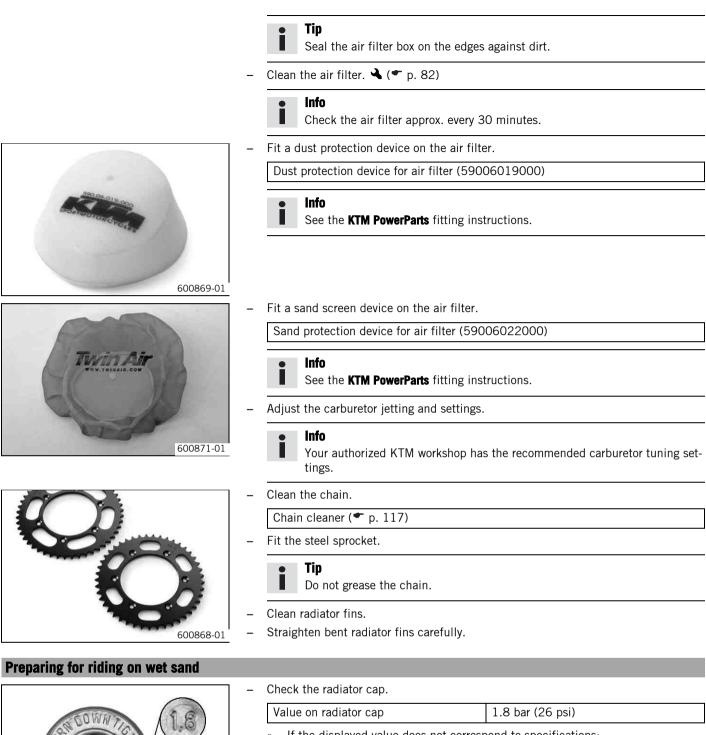

> If the displayed value does not correspond to specifications:

## Warning

**Danger of scalding** During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not remove the radiator cap, radiator hoses or other cooling system components when the engine is hot. Allow the engine and cooling system to cool down. In case of scalding, rinse immediately with lukewarm water.
- Change the radiator cap.
- Seal the air filter box. 🔌

Danger of scalding During motorcycle operation, the coolant gets very hot and is under pressure.

- system components when the engine is hot. Allow the engine and cooling system to cool down. In case of scalding, rinse immediately with lukewarm water.
- Change the radiator cap.
- Seal the air filter box. 🔌

#### Tip •

600872-10

Seal the air filter box on the edges against dirt.

Clean the air filter. 🔌 (🕶 p. 82)

- If the displayed value does not correspond to specifications:

## Warning

28

Do not remove the radiator cap, radiator hoses or other cooling

29

	Check the air filter approx. every 30 minutes.

## **RIDING INSTRUCTIONS**

#### Checks before putting into operation

#### lnfo

Make sure that the motorcycle is in a perfect technical condition before use.

#### • Info

In the interests of riding safety, make a habit of making a general check before you ride.

- Check the chain tension. (\* p. 57)
- Check the tire condition. (\* p. 72)
- Check the brake fluid level of the front brake. ( p. 62)
- Check the rear brake fluid level. (\* p. 66)
- Check the front brake linings. (\* p. 64)
- Check the rear brake linings. (\* p. 67)
- Check the brake system function.
- Check the settings of all controls and ensure that they can be operated smoothly.
- Check the functioning of the electrical equipment.

#### Starting

## A Danger

Danger of poisoning Exhaust gases are poisonous and inhaling them may result in unconsciousness and/or death.

 When running the engine, always make sure there is sufficient ventilation, and do not start or run the engine in an enclosed space without an effective exhaust extraction system.

#### Note

Engine failure High engine speeds in cold engines have a negative effect on the service life of the engine.

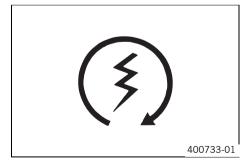

Always warm up the engine at low engine speeds.

### Info

If the motorcycle is unwilling to start, the cause can be old fuel in the float chamber. The flammable elements of the fuel evaporate after a long time of standing.

If the float chamber is filled with fresh fuel, the engine starts immediately.

Press the starter for a maximum of 5 seconds. Wait for a least 5 seconds until trying again.

Engine has been out of use for more than 1 week

#### (EXC-F, EXC-F SIX DAYS, XCF-W)

- Turn handle  $\bullet$  of the fuel tap to the **ON** position. (Figure 500137-10  $\clubsuit$  p. 22)
  - ✓ Fuel can flow from the fuel tank to the carburetor.

#### (SX-F)

- Turn handle **1** of the fuel tap to the **0N** position. (Figure 500178-10<sup>\*\*</sup> p. 22)
   ✓ Fuel can flow from the fuel tank to the carburetor.
- Remove the motorcycle from the stand.
- Remove the motorcycle from the sta
- Shift transmission to neutral.

## (EXC-F AUS)

– Turn the emergency OFF switch to the position  $\bigcirc$ .

#### The engine is cold (XCF-W, SX-F, EXC-F AUS)

- Pull choke lever out as far as possible.

#### (EXC-F EU, EXC-F SIX DAYS)

- Pull the choke lever to the stop.

 Press the electric starter button or press the kickstarter robustly through its full range.

Do not open the throttle.

#### Starting up

#### • Info

If your bike has lights, switch them on before riding. You will then be seen earlier by other motorists. When you are riding, the side stand must be folded up and secured with the rubber band.

Pull the clutch lever, engage 1st gear, release the clutch lever slowly and simultaneously open the throttle carefully.

#### Shifting, riding

### Warning

Danger of accidents If you change down at high engine speed, the rear wheel can lock up.

Do not change into a low gear at high engine speed. The engine overspeeds and the rear wheel can block.

#### Info

If you hear unusual noises while riding, stop immediately, switch off the engine and contact an authorized KTM workshop. First gear is used for starting off or for steep inclines.

- When conditions allow (incline, road situation, etc.), you can shift into a higher gear. To do so, release the throttle while simultaneously pulling the clutch lever, shift into the next gear, release the clutch and open the throttle.
- If the choke function was activated, deactivate it after the engine has warmed up.
- When you reach maximum speed after fully opening the throttle, turn back the throttle to about <sup>3</sup>/<sub>4</sub> of its range. This barely reduces vehicle speed but lowers fuel consumption considerably.
- Always open the throttle only as much as the engine can handle abrupt throttle opening increases fuel consumption.
- To shift down, brake and close the throttle at the same time.
- Pull the clutch lever and shift into a lower gear, release the clutch lever slowly and open the throttle or shift again.
- Switch off the engine if you expect to be stationary for a long time.
  - Guideline

 $\geq 2 \text{ min}$ 

- Avoid frequent and prolonged slipping of the clutch. This causes heat build-up in the engine oil, the engine and the cooling system.
- Ride at lower engine speeds instead of high revs and a slipping clutch.

#### Braking

## Warning

Danger of accidents If you brake too hard, the wheels can lock.

- Adapt your braking to the traffic situation and the road conditions.

Warning

Danger of accidents Reduced braking efficiency caused by spongy pressure point of front or rear brake.

- Check the brake system and do not continue riding. (Your authorized KTM workshop will be glad to help.)

Warning

Danger of accidents Reduced braking efficiency due to wet or dirty brakes.

- Clean or dry dirty or wet brakes by riding and braking gently.
- On sandy, wet or slippery surfaces, use the rear brake.
- Braking should always be completed before you go into a bend. Change down to a lower gear appropriate to your road speed.
- On long downhill stretches, use the braking effect of the engine. Change down one or two gears, but do not overstress the engine.
   In this way, you have to brake far less and the brakes do not overheat.

## **RIDING INSTRUCTIONS**

#### Stopping, parking

#### Warning Risk of m

- Risk of misappropriation Usage by unauthorized persons.
- Never leave the vehicle while the engine is running. Secure the vehicle against use by unauthorized persons.

- Danger of burns Some vehicle components get very hot when the vehicle is in use.
- Do not touch hot components such as exhaust system, radiator, engine, shock absorber and brakes. Allow these components to cool down before starting work on them.

#### Note

Danger of damage The parked vehicle can roll away or fall over.

- Always place the vehicle on a firm and even surface.

#### Note

Fire hazard Some vehicle components become very hot when the vehicle is operated.

 Do not park the vehicle near flammable or explosive substances. Do not place objects on the vehicle while it is still warm from being run. Always let the vehicle cool first.

#### Note

Material damage Damage and destruction of components by excessive load.

- The side stand is designed for the weight of the motorcycle only. Do not sit on the motorcycle when it is supported by the side stand only. The side stand and/or the frame could be damaged and the motorcycle could fall over.
- Brake the motorcycle.
- Shift transmission to neutral.

#### (XCF-W, SX-F)

- Press and hold the short circuit button  $\otimes$  while the engine is idling until the engine stops.
- (EXC-F, EXC-F SIX DAYS)
- Press and hold the short circuit button  $\bigotimes$  while the engine is idling until the engine stops.

#### (EXC-F, EXC-F SIX DAYS, XCF-W)

- Turn handle **1** of the fuel tap to the **OFF** position. (Figure 500137-10 P. 22)

#### (SX-F)

- Turn handle **1** of the fuel tap to the **OFF** position. (Figure 500178-10 P. 22)
- Park the motorcycle on firm ground.

#### Refueling

### **Danger**

Fire hazard Fuel is highly flammable.

- Never refuel the vehicle near open flames or burning cigarettes, and always switch off the engine first. Be careful that no fuel is spilt, especially on hot vehicle components. Clean up spilt fuel immediately.
- Fuel in the fuel tank expands when warm and can escape if the tank is overfilled. See the notes on refueling.

## Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

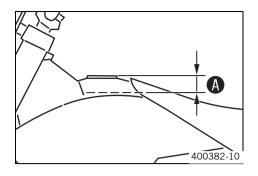

Avoid contact of the fuel with skin, eyes and clothing. Do not inhale fuel vapors. If fuel gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If fuel is swallowed, contact a doctor immediately. Change clothing that has come into contact with fuel.

### Warning

Environmental hazard Improper handling of fuel is a danger to the environment.

- Do not allow fuel to get into the ground water, the ground, or the sewage system.
  - Switch off engine.

– Fill the fuel tank with fuel up to measurement  $\boldsymbol{\Theta}$ .

#### Guideline

dalaonno		
Measurement of <b>A</b>		35 mm (1.38 in)
Total fuel tank capacity, approx. (EXC-F, EXC-F SIX DAYS, XCF-W)	9.2 l (2.43 US gal)	Super unleaded (ROZ 95 / RON 95 / PON 91) ( P. 116)
Total fuel tank capacity, approx. (SX-F)	8.0   (2.11 US gal)	Super unleaded (ROZ 95 / RON 95 / PON 91) ( p. 116)

Close the filler cap. (\* p. 23)

#### Important maintenance work to be carried out by an authorized KTM workshop (as additional order)

\$10A: Every 10 service hours - corresponds to about 70 liters of fuel (18.5 US gal) / after every race

S20N: Once after 20 service hours - corresponds to about 140 liters of fuel (37 US gal)

**S20A:** Every 20 service hours - corresponds to about 140 liters of fuel (37 US gal)

S30A: Every 30 service hours - corresponds to about 210 liters of fuel (55.5 US gal)

**S40A:** Every 40 service hours - corresponds to about 280 liters of fuel (74 US gal)

S80A: Every 80 service hours - corresponds to about 560 liters of fuel (148 US gal)

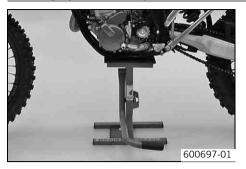

J1A: annually

#### Important checks and maintenance work to be carried out by the rider

	NB1A
Check the engine oil level. (* p. 87)	•
Check the brake fluid level of the front brake. (* p. 62)	•
Check the rear brake fluid level. ( p. 66)	•
Check the front brake linings. (* p. 64)	•
Check the rear brake linings. (* p. 67)	•
Check and adjust the cables.	•
Bleed fork legs. (* p. 48)	•
Clean the dust boots of the fork legs. (  p. 48)	•
Clean the chain. (* p. 56)	•
Check the chain tension. (* p. 57)	•
Check the chain wear. (* p. 58)	•
Check rear sprocket/engine sprocket for wear. ( p. 57)	•
Clean the air filter. 🔌 (🕶 p. 82)	•
Check the tire air pressure. ( p. 73)	•
Check the tire condition. (* p. 72)	•
Check the coolant level. (     p. 79)	•
Empty the carburetor float chamber. 🔌 (🕶 p. 86)	•
Check all controls for smooth operation.	•
Check braking.	•
Check all screws, nuts and hose clamps regularly for tightness.	•

**NB1A:** Depending on conditions of use according to requirements.

#### Jacking up the motorcycle

#### Note

Danger of damage The parked vehicle can roll away or fall over.

- Always place the vehicle on a firm and even surface.
- Jack up the motorcycle underneath the engine. The wheels should no longer touch the ground.
  - Work stand (54829055000)
- Secure the motorcycle against falling over.

#### Removing the motorcycle from the work stand

#### Note

Danger of damage The parked vehicle can roll away or fall over.

- Always place the vehicle on a firm and even surface.
- Remove the motorcycle from the work stand.
- Remove the work stand.

#### Checking the basic suspension setting with the rider's weight

#### Info

When adjusting the basic suspension setting, first adjust the shock absorber and then the fork.

 For optimal motorcycle riding characteristics and to avoid damage to forks, shock absorbers, swing arm and frame, the basic settings of the suspension components must match your body weight.

- As delivered, KTM off-road motorcycles are adjusted for a standard rider weight (with full protective clothing).

Guide	е			

Standa	rd rider weight			753	85 kg	(165	187 lb.)		

 If your weight is above or below the standard range, you have to adjust the basic setting of the suspension components accordingly.

 Small weight differences can be compensated by adjusting the spring preload, but in the case of large weight differences, the springs must be replaced.

#### **Compression damping of shock absorber**

The shock absorber can regulate compression damping separately in the low-speed and high-speed ranges (Dual Compression Control). The terms low-speed and high-speed refers to the movement of the shock absorber during compression and not to the riding speed of the motorcycle.

Changes in the settings in the low-speed range have an impact on the high-speed range and vice versa.

#### Adjusting high-speed compression damping of the shock absorber

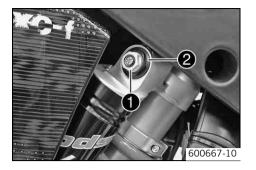

#### Danger

**Danger of accidents** Disassembly of pressurized parts can lead to injury.

 The shock absorber is filled with high density nitrogen. Adhere to the description provided. (Your authorized KTM workshop will be glad to help.)

The high-speed setting can be seen during the fast compression of the shock absorber.

Turn adjusting screw **1** all the way clockwise with a ring wrench.

Do not loosen nut 2

- Turn back counterclockwise by the number of turns corresponding to the shock absorber type.

#### Guideline

#### (EXC-F, EXC-F SIX DAYS, XCF-W)

Compression damping, high-speed	
Comfort	2 turns
Standard	1.5 turns
Sport	1.25 turns

#### (SX-F)

Compression damping, high-speed	
Comfort	2 turns
Standard	1.5 turns
Sport	1 turn

#### Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

#### Adjusting the low-speed compression damping of the shock absorber

#### Danger

Danger of accidents Disassembly of pressurized parts can lead to injury.

The shock absorber is filled with high density nitrogen. Adhere to the description provided. (Your authorized KTM workshop will be glad to help.)

#### Info

The low-speed setting can be seen during the slow to normal compression of the shock absorber.

- Turn adjusting screw **1** clockwise with a screwdriver to the last click.

### • Info

Do not loosen nut 2

 Turn back counterclockwise by the number of clicks corresponding to the shock absorber type.

#### Guideline (EXC-F, EXC-F SIX DAYS, XCF-W)

Compression damping, low-	peed
Comfort	22 clicks
Standard	20 clicks
Sport	15 clicks

#### (SX-F)

 Compression damping, low-speed

 Comfort
 17 clicks

 Standard
 15 clicks

 Sport
 13 clicks

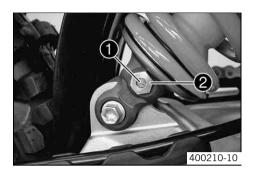

#### Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

#### Adjusting the rebound damping of the shock absorber

#### **Danger**

- **Danger of accidents** Disassembly of pressurized parts can lead to injury.
- The shock absorber is filled with high density nitrogen. Adhere to the description provided. (Your authorized KTM workshop will be glad to help.)

Turn adjusting screw **1** clockwise with a screwdriver to the last click.

- Turn back counterclockwise by the number of clicks corresponding to the shock absorber type.

Guideline

#### (EXC-F, EXC-F SIX DAYS, XCF-W)

Rebound damping	
Comfort	26 clicks
Standard	24 clicks
Sport	22 clicks

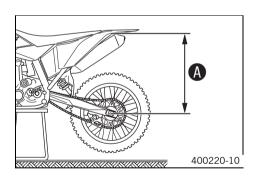

#### (SX-F)

Rebound damping	
Comfort	24 clicks
Standard	22 clicks
Sport	22 clicks

#### • Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

#### Measuring rear wheel sag unloaded

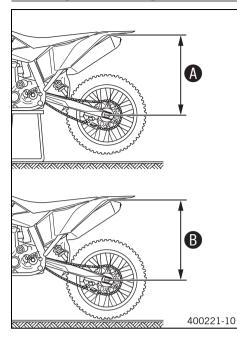

- Jack up the motorcycle. (\* p. 40)
- Measure the distance as vertical as possible between the rear axle and a fixed point, for example, a mark on the side cover.
- Make a note of the value as measurement 

   Make a note of the value as measurement
   Make a note of the value as measurement

\_

#### Checking the static sag of the shock absorber

#### - Measure distance () of rear wheel unloaded. (\* p. 42)

- Ask someone to help you by holding the motorcycle upright.
- Measure the distance between the rear axle and the fixed point again.
- Make a note of the value as measurement <sup>1</sup>

#### Info

The static sag is the difference between measurements () and ().

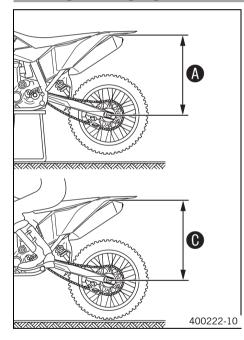

#### - Check the static sag.

#### (EXC-F, EXC-F SIX DAYS, XCF-W)

33 mm (1.3 in)

- Adjust the spring preload of the shock absorber.  $\checkmark$  ( $\checkmark$  p. 43)

#### Checking the riding sag of the shock absorber

- Measure distance 🛽 of rear wheel unloaded. (🕶 p. 42)
- With the help of a second person to steady the motorcycle, the rider wearing a full set of protective clothing sits on the motorcycle in the normal seating position (with feet on the footrests). Then depress and release the rear of the motorcycle repeatedly so that the rear suspension is returned to the normal operating position.
- The other person now measures the distance between the rear axle and the fixed point again.
- Make a note of the value as measurement  $\Theta$ .

#### Info

The riding sag is the difference between measurements () and ().

#### Check the riding sag.

#### (EXC-F, EXC-F SIX DAYS, XCF-W)

Riding sag	105 mm (4.13 in)
(SX-F)	
Riding sag	105 mm (4.13 in)
» If the riding sag differs from the specified measurement.	

- If the riding sag differs from the specified measurement:
  - Adjust the riding sag. 🔌 (🕶 p. 44)

#### Adjusting the spring preload of the shock absorber 🔧

Danger

Danger of accidents Disassembly of pressurized parts can lead to injury.

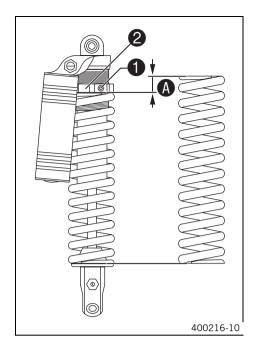

The shock absorber is filled with high density nitrogen. Adhere to the description provided. (Your authorized KTM workshop will be glad to help.)

#### • Info

Before changing the spring preload, make a note of the present setting, e.g., by measuring the length of the spring.

- Remove shock absorber. 

   (\* p. 45)
- After removing the shock absorber, clean it thoroughly.

- Loosen screw **①**.
- Turn adjusting ring **2** until the spring is no longer under tension.

Combination wrench (50329080000)	
Hook wrench (T106S)	

- Measure the overall spring length when not under tension.
- \_ Tighten the spring by turning adjusting ring 2 to measurement 4.

#### Guideline

#### (EXC-F, EXC-F SIX DAYS, XCF-W) Spring preload 8 mm (0.31 in)

(5X-r)		
Spring preload	6 mm (0.24 in)	

Info

Depending on the static sag and/or the riding sag, it may be necessary to increase or decrease the spring preload.

#### Tighten screw **1**.

Guideline		
Screw, shock absorber adjusting ring	M6	5 Nm (3.7 lbf ft)

Install the shock absorber.  $\checkmark$  (\* p. 45)

#### Adjusting the riding sag 🔧

- Remove shock absorber. 🔌 (🕶 p. 45)
- After removing the shock absorber, clean it thoroughly.
- Choose and mount a suitable spring.

#### Guideline

#### (EXC-F, EXC-F SIX DAYS, XCF-W)

Spring rate	
Weight of rider: 65 75 kg (143 165 lb.)	66 N/mm (377 lb/in)
Weight of rider: 75 85 kg (165 187 lb.)	69 N/mm (394 lb/in)
Weight of rider: 85 95 kg (187 209 lb.)	72 N/mm (411 lb/in)

#### (SX-F)

Spring rate	
Weight of rider: 65 75 kg (143 165 lb.)	66 N/mm (377 lb/in)
Weight of rider: 75 85 kg (165 187 lb.)	69 N/mm (394 lb/in)
Weight of rider: 85 95 kg (187 209 lb.)	72 N/mm (411 lb/in)

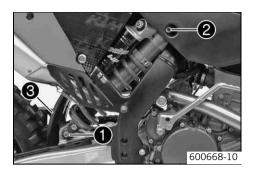

#### Info

The spring rate is shown on the outside of the spring. Smaller weight differences can be compensated by changing the spring preload.

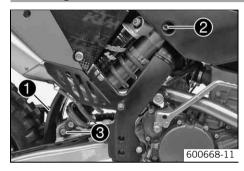

Install the shock absorber. 🔌 (🕶 p. 45)

- Check the static sag of the shock absorber. (\* p. 43)
- Check the riding sag of the shock absorber. (\* p. 43)
- Adjust the rebound damping of the shock absorber. ( \* p. 42)

#### Removing the shock absorber 🔌

#### Installing the shock absorber 🔧

- Jack up the motorcycle. (**\*\*** p. 40)
  - Remove screw **1** and lower the rear wheel with the swing arm as far as possible without blocking the rear wheel. Fix the rear wheel in this position.
- Remove screw **2**, push splash protector **3** to the side, and remove the shock absorber.

Push splash protector  $\bullet$  to the side and position the shock absorber. Mount and tighten screw @.

#### Guideline

Screw, top shock absorber	M12	80 Nm (59 lbf ft)	Loctite <sup>®</sup> 243™
---------------------------	-----	----------------------	---------------------------

- Mount and tighten screw **6**.

#### Guideline

Screw, bottom shock M12 absorber	80 Nm (59 lbf ft)	Loctite <sup>®</sup> 243™
-------------------------------------	----------------------	---------------------------

#### Info

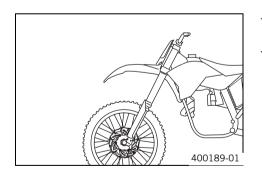

The heim joint for the shock absorber at the swing arm is Teflon coated. It must not be greased with grease or with other lubricants. Lubricants dissolve the Teflon coating, thereby drastically reducing the service life.

- Remove the motorcycle from the work stand. (
 p. 40)

#### **Checking basic setting of fork**

#### Info

For various reasons, no exact riding sag can be determined for the forks.

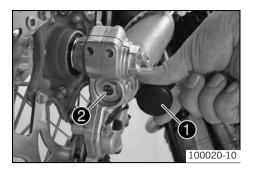

- As with the shock absorber, smaller weight differences can be compensated by the spring preload.
- However, if your fork is often overloaded (hits the bump stops on compression), it is recommended to fit stiffer springs to avoid damage to the fork and frame.

#### Adjusting the compression damping of the fork

Info

The hydraulic compression damping determines the fork suspension behavior.

#### (EXC-F, EXC-F SIX DAYS, XCF-W)

- Remove protection covers ①.
  - Turn adjusting screws 2 clockwise all the way.

#### Info

Adjusting screws **2** are located at the bottom end of the fork legs. Make the same adjustment on both fork legs.

Turn back counterclockwise by the number of clicks corresponding to the fork type.

#### Guideline

Compression damping	
Comfort	26 clicks
Standard	22 clicks
Sport	18 clicks

#### lnfo

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

Mount protection covers ①.

#### (SX-F)

Turn adjusting screws ① clockwise all the way.

#### Info

Adjusting screws **1** are located at the top end of the fork legs. Make the same adjustment on both fork legs.

Turn back counterclockwise by the number of clicks corresponding to the fork type.

#### Guideline (SX-F EU)

Compression damping	
Comfort	14 clicks
Standard	12 clicks
Sport	10 clicks

#### (SX-F USA)

Compression damping	
Comfort	14 clicks
Standard	12 clicks
Sport	10 clicks

#### Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

#### Adjusting the rebound damping of the fork

#### linfo

The hydraulic rebound damping determines the fork suspension behavior.

#### (EXC-F, EXC-F SIX DAYS, XCF-W)

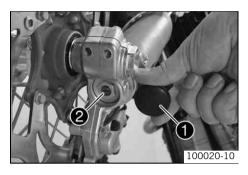

Turn adjusting screws ① clockwise all the way.

Adjusting screws **1** are located at the top end of the fork legs. Make the same adjustment on both fork legs.

 Turn back counterclockwise by the number of clicks corresponding to the fork type.

#### Guideline

Rebound damping	
Comfort	24 clicks
Standard	20 clicks
Sport	20 clicks

#### Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

#### (SX-F)

Remove protection covers ①.

- Turn adjusting screws 2 clockwise all the way.

#### Guideline (SX-F FII)

(0)	<b>~</b> -I	LU)	

Rebound damping	
Comfort	14 clicks
Standard	12 clicks
Sport	10 clicks

#### (SX-F USA)

Rebound damping	
Comfort	14 clicks
Standard	12 clicks
Sport	10 clicks

#### Info

Adjusting screws **2** are located at the bottom end of the fork legs. Make the same adjustment on both fork legs.

Turn back counterclockwise by the number of clicks corresponding to the fork type.

#### Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

Mount protection covers ①.

#### Adjusting the spring preload of the fork (EXC-F, EXC-F SIX DAYS, XCF-W)

\_

Turn the adjusting screws counterclockwise all the way.

#### • Info Mak

Make the same adjustment on both fork legs.

Turn back clockwise by the number of turns corresponding to the fork type. Guideline

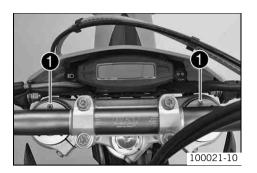

#### Spring preload - Preload Adjuster

Spring preioau - Freivau Aujustei	
Comfort	0 turn
Standard	2 turns
Sport	4 turns

#### • Info

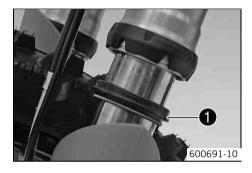

- Turn clockwise to increase spring preload; turn counterclockwise to reduce spring preload.
  - Adjusting the spring preload has no influence on the absorption setting of the rebound damping.
  - Basically, however, you should set the rebound damping higher with a higher spring preload.

#### **Bleeding fork legs**

- Jack up the motorcycle. ( p. 40) \_
  - Remove bleeder screws **1** briefly.
  - ✓ Any excess pressure escapes from the interior of the fork.
  - Mount and tighten bleeder screws.
- Remove the motorcycle from the work stand. (\* p. 40)

#### Cleaning the dust boots of the fork legs

- Jack up the motorcycle. (\* p. 40) \_
- Loosen the fork protector. (\* p. 48)
- Push dust boots **1** of both fork legs downwards.

#### Info

The dust boots should remove dust and coarse dirt particles from the fork tubes. Over time, there is an ingress of dirt inside the boots. If this dirt is not removed, it may cause the oil seals to leak.

#### Warning

- Danger of accidents Reduced braking efficiency due to oil or grease on the brake discs.
- Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.
- Clean and oil the dust boots and inner fork tube of both fork legs.

Universal oil spray (\* p. 118)

- Press the dust boots back into their normal position.
- Remove excess oil.
- Position the fork protection. (\* p. 48)
- Remove the motorcycle from the work stand. (\* p. 40)

#### Loosening the fork protector

- Remove screws **1** and remove the clamp.
- Remove screws 2 on the left fork leg. Push the fork protector downwards. \_
- Remove the screws on the right fork leg. Push the fork protector downwards.

#### Positioning the fork protection

Position the fork protection on the left fork leg. Mount and tighten screws **1**. Guideline

	Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
--	---------------------------	----	--------------------

#### (EXC-F, EXC-F SIX DAYS, XCF-W)

- Position the wiring harness.
- Position the brake line. Put the clamp on, mount and tighten screws 2.
- Position the fork protection on the right fork leg. Mount and tighten the screws. Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
---------------------------	----	--------------------

#### Checking steering head bearing play

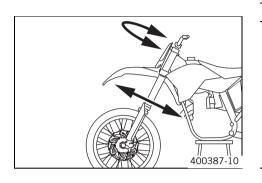

Warning

Danger of accidents Unstable vehicle handling from incorrect steering head bearing play.

- Adjust the steering head bearing play without delay. (Your authorized KTM workshop will be glad to help.)

#### lnfo

If the bike is driven for a longer time with play in the steering head bearing, the bearing and the bearing seats in the frame can be damaged after time.

- Move the handlebar to the straight-ahead position. Move the fork legs to and fro in the direction of travel.

49

No play should be noticeable in the steering head bearing.

If there is noticeable play present:

#### (SX-F, 250 EXC-F SIX DAYS EU)

- Adjust the play of the steering head bearing. 🔌 (🕶 p. 50)
- (EXC-F EU, EXC-F AUS, XCF-W ZA)
  - Adjust play of the steering head bearing. 🔌 (🕿 p. 49)
- Move the handlebar to and fro over the entire steering range.

The handlebar must be able to move easily over the entire steering range. No resting locations should be noticeable.

» If click positions are noticeable:

#### (SX-F, 250 EXC-F SIX DAYS EU)

– Adjust the play of the steering head bearing. 🔌 (🕶 p. 50)

#### (EXC-F EU, EXC-F AUS, XCF-W ZA)

- Adjust play of the steering head bearing. ◀ (♥ p. 49)
- Check the steering head bearing and replace if required.

#### Adjusting play of steering head bearing \land (EXC-F EU, EXC-F AUS, XCF-W ZA)

Install the fork legs. 🔌 (🕶 p. 51)

#### **Removing the front fender**

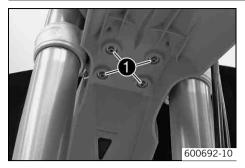

Make sure the spacers remain in place.

500692

– Remove screws ①. Remove the front fender.

52

#### Installing the front fender

- Ensure that the spacers are mounted in the fender.
- Position the front fender. Mount and tighten screws ①.

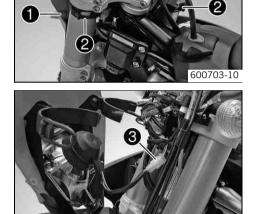

#### Guideline

Make sure the holding lugs engage in the start number plate or headlight mask.

#### Removing headlight mask with headlight (EXC-F, EXC-F SIX DAYS, XCF-W)

- Switch off all electrical equipment.
- Remove screw **1** and take off clamp.
- Loosen the rubber band **2**. Push up the headlight mask and swing it forwards.

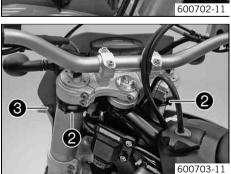

- Pull out the electric plug connector ③ and remove the headlight mask with the headlight.

#### Refitting the headlight mask with the headlight (EXC-F, EXC-F SIX DAYS, XCF-W)

600702-10

Connect the electric plug connector •.

- Position the headlight mask and fix it with the rubber band **2**.
  - Info
     Ensure t

Ensure that the retaining lugs engage in the fender.

- Check the headlight adjustment. (• p. 76)

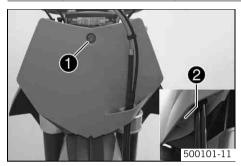

#### Removing the start number plate (SX-F)

#### - Remove screw **①** and take off clamp.

Remove screw **2** with the spacer. Remove the start number plate.

Installing the start number plate (SX-F)

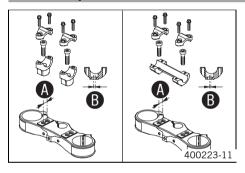

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)

Take care with the contact of the holding lug at the fender.

Position the brake line and wiring harness. Put the clamp on, mount and tighten screw  $\boldsymbol{2}$ .

#### **Handlebar** position

On the upper triple clamp, there are 2 holes at a distance of (2) to each other.			
15 mm (0.59 in)			
The holes on the handlebar support are placed at a distance of $m{ extbf{ heta}}$ from the center.			
3.5 mm (0.138 in)			

The handlebar supports can be mounted in 4 different positions.

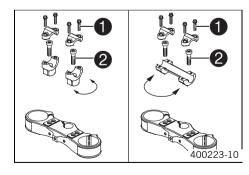

#### Adjusting handlebar position 🔧

#### Warning

Danger of accidents Handlebar breakage.

 If the handlebar is bent or straightened it will cause material fatigue, and the handlebar can break. Always replace handlebar.

Remove the four screws  ${\bf 0}.$  Remove the handlebar clamps. Remove the handlebar and lay it to one side.

#### Info

Protect the motorcycle and its attachments against damage by covering them.
 Do not bend the cables and lines.

bo not bend the cables and intes.

- Remove the two screws **2**. Remove the handlebar support.
- Place the handlebar support in the required position. Fit and tighten the two screws
   2.

### Guideline

Screw, handlebar supportM1040 NmLoctite® 243™(29.5 lbf ft)(29.5 lbf ft)
---

#### lnfo

Position the left and right handlebar supports evenly.

Position the handlebars.

Position the handlebar clamps. Fit and evenly tighten the four screws ①.
 Guideline

Screw, handlebar clamp	M8	20 Nm (14.8 lbf ft)
------------------------	----	------------------------

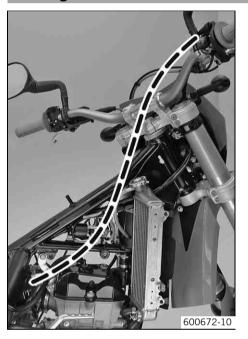

The two throttle cables must run parallel behind the handlebar down to the frame. They must be routed directly to the right of the frame above the tank bracket

• Info

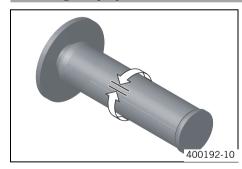

towards the carburetor.

Make sure the gap width is even.

#### **Checking throttle cable route**

#### Checking the play in the throttle cable

- Move the handlebar to the straight-ahead position. Move the throttle grip backwards and forwards to ascertain the play in the throttle cable.

	Play in throttle cable	3 5 mm (0.12 0.2 in)
--	------------------------	----------------------

- » If the throttle cable play does not meet specifications:
  - Adjust the play in the throttle cable. A (\* p. 56)

#### Danger

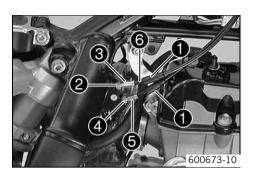

**Danger of poisoning** Exhaust gases are poisonous and inhaling them may result in unconsciousness and/or death.

- When running the engine, always make sure there is sufficient ventilation, and do not start or run the engine in an enclosed space without an effective exhaust extraction system.
- Start the engine and let it run idle. Move the handlebar to and fro over the entire steering range.

The idle speed must not change.

- » If the idle speed changes:
  - − Adjust the play in the throttle cable. ◀ (♥ p. 56)

#### Adjusting the play in the throttle cable $\triangleleft$

– Dismount the fuel tank. 🔌 (🕶 p. 77)

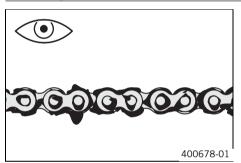

- Check throttle cable route. (\* p. 55)
- Move the handlebar to the straight-ahead position.
- Push back bellows ①.
- Loosen nut 2. Turn adjusting screw 3 in as far as possible.
- Loosen nut ④. Turn adjusting screw ⑤ so that there is play in the gas throttle cable at the throttle grip.

Guideline

Play in throttle cable3 5 mm (0.12 0.2 in)
--

- Tighten nut 🕘.
- Press and hold the throttle grip in the closed setting. Turn adjusting screw 3 out until there is no play in the throttle cable 3.
- Tighten nut 2.
- Push bellows **1** on. Check the throttle grip for smooth operation.
- Install the fuel tank. 🔌 (🕶 p. 78)
- Check the play in the throttle cable. (
   p. 55)

#### Checking for chain dirt accumulation

Check the chain for coarse dirt accumulation.

- » If the chain is very dirty:
  - Clean the chain. (\* p. 56)

#### **Cleaning the chain**

### Warning

**Danger of accidents** Oil or grease on the tires reduces their grip.

Remove oil and grease with a suitable cleaning material.

Warning

Danger of accidents Reduced braking efficiency due to oil or grease on the brake discs.

- Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.

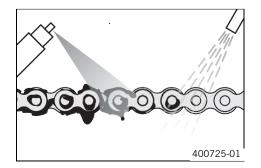

Warning

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

#### Info

The service life of the chain depends largely on its maintenance.

Clean the chain regularly and then treat with chain spray.

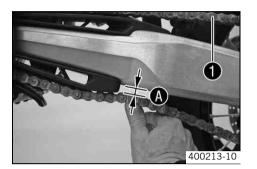

Chain cleaner (🕶 p. 117)
Off-road chain spray (🕶 p. 117)

#### **Checking the chain tension**

Danger of accidents Danger caused by incorrect chain tension.

If the chain tension is too high, the components of the secondary power train (chain, engine sprocket, rear sprocket, bearings in transmission and rear wheel) are under additional load. Apart from premature wear, in extreme cases the chain can rupture or the countershaft of the transmission can break. On the other hand, if the chain is loose, it can fall off the engine sprocket or the rear sprocket and block the rear wheel or damage the engine. Check the chain tension and correct if necessary.

- Push the chain up at the rear edge of the chain guide to measure the chain tension **(a)**.

The upper chain section **①** must be taut. Chain wear is not always even, so you should repeat this measurement at different chain positions.

|--|

» If the chain tension does not meet specifications:

- Adjusting chain tension after checking. (\* p. 59)
- Remove the motorcycle from the work stand. (\* p. 40)

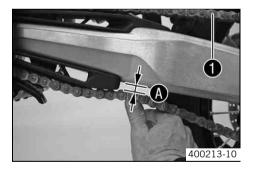

#### Checking chain tension when fitting rear wheel

#### Warning

Danger of accidents Danger caused by incorrect chain tension.

If the chain tension is too high, the components of the secondary power train (chain, engine sprocket, rear sprocket, bearings in transmission and rear wheel) are under additional load. Apart from premature wear, in extreme cases the chain can rupture or the countershaft of the transmission can break. On the other hand, if the chain is loose, it can fall off the engine sprocket or the rear sprocket and block the rear wheel or damage the engine. Check the chain tension and correct if necessary.

- Make sure that the chain adjusters are fitted correctly on the adjusting screws.
- Push the chain up at the rear edge of the chain guide to measure the chain tension  $\mathbf{Q}$ .

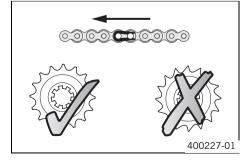

The upper chain section **①** must be taut. Chain wear is not always even, so you should repeat this measurement at different chain positions.

Chain tension	8 10 mm (0.31 0.39 in)
---------------	------------------------

- If the chain tension does not meet specifications:
  - Adjust the chain tension when fitting rear wheel. ( p. 60)

#### Checking the rear sprocket/engine sprocket for wear

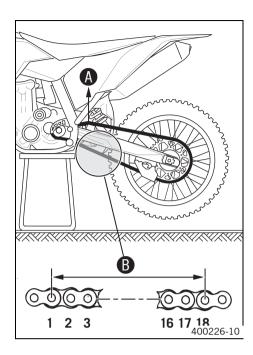

- Check rear sprocket/engine sprocket for wear.
  - If the rear sprocket / engine sprocket are worn:
    - Replace the rear sprocket/engine sprocket.

When fitting the split link, always make sure that the closed side of the locking clip faces forward (riding direction). The engine sprocket, rear sprocket and chain should always be replaced together.

Check the chain guide for tightness and wear.

#### **Checking chain wear**

- Jack up the motorcycle. (\* p. 40)
- Shift transmission to neutral.

Weight of chain wear measurement			10 15 kg (22 33 lb.)											
			~	6.1.0			 							

- Measure the distance **()** of 18 chain links in the lower chain section.

#### lnfo

Chain wear is not always even, so you should repeat this measurement at different chain positions.

Maximum distance 🖲 at the longest	272 mm (10.71 in)
chain section	

- » If the distance **()** is greater than the specified measurement:
  - Replace the chain.

When you replace the chain, you should also replace rear sprocket and engine sprocket.

New chains wear out faster on old, worn sprockets.

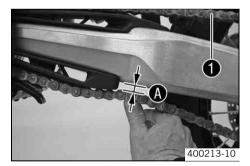

#### Adjusting chain tension

#### Warning

Danger of accidents Danger caused by incorrect chain tension.

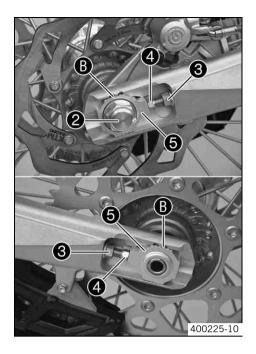

If the chain tension is too high, the components of the secondary power train (chain, engine sprocket, rear sprocket, bearings in transmission and rear wheel) are under additional load. Apart from premature wear, in extreme cases the chain can rupture or the countershaft of the transmission can break. On the other hand, if the chain is loose, it can fall off the engine sprocket or the rear sprocket and block the rear wheel or damage the engine. Check the chain tension and correct if necessary.

- Jack up the motorcycle. (\* p. 40)
  - Push the chain up at the rear edge of the chain guide to measure the chain tension **()**.

The upper chain section **1** must be taut. Chain wear is not always even, so you should repeat this measurement at different chain positions.

- Loosen nut 🛛.
- Loosen nuts 🕄.
- Adjust the chain tension by turning the adjusting screws ④ left and right.
   Guideline

Chain tension	8 10 mm (0.31 0.39 in)		
Turn adjusting screws ④ on the left and and right chain adjusters are in the same marks ⑤. The rear wheel is then correct	e position relative to the reference		

#### – Tighten nuts 🛛.

- Make sure that chain adjusters **③** are fitted correctly on adjusting screws **④**.

#### - Tighten nut 🛛.

#### Guideline

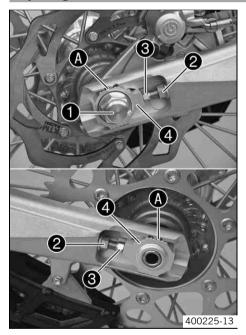

Nut, rear wheel spindleM20x1.580 Nm (59 lbf ft)
---

#### • Info

The wide adjustment range of the chain adjusters (32 mm) enables different secondary transmissions with the same chain length. Chain adjusters **G** can be turned by 180°.

- Remove the motorcycle from the work stand. (\* p. 40)

#### Adjusting chain tension - after checking

#### Loosen nut 1.

- Loosen nuts 2.
- Adjust the chain tension by turning the adjusting screws <sup>3</sup> left and right.
   Guideline

J	u	IU	ei	П	ie	

Chain tension	8 10 mm (0.31 0.39 in)
Turn the adjusting screws ③ left and rig right chain adjusters are in the same pos The rear wheel is then correctly aligned.	

#### – Tighten nuts 🛛.

• Make sure that the chain adjusters ④ are fitted correctly on the adjusting screws ⑤.

Tighten nut ●.

Guideline

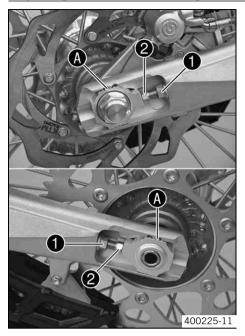

Nut, rear wheel spindle	M20x1.5	80 Nm (59 lbf ft)
-------------------------	---------	-------------------

#### lnfo

The wide adjustment range of the chain adjusters (32 mm) enables different secondary transmissions with the same chain length. The chain adjusters 4 can be turned by 180°.

\_

#### Adjusting chain tension - fitting rear wheel

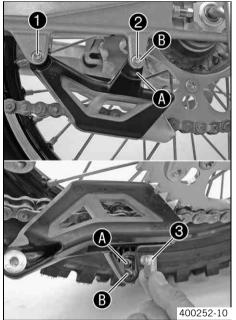

#### Loosen nuts **①**.

-	Adjust the chain tension by turning the adjusting screws <b>2</b> left and right.
	Guideline

Chain tension	8 10 mm (0.31 0.39 in)
Turn the adjusting screws <b>2</b> left and rig right chain adjusters are in the same pos The rear wheel is then correctly aligned.	

Tighten nuts 1.

- Remove screws **①** and **②**. Take off the chain guide.

#### Condition

- Number of teeth:  $\leq$  44 teeth
- Insert nut 3 in hole 1. Position the chain guide.
- Mount and tighten screws ① and ②.
   Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)	
---------------------------	----	-----------------------	--

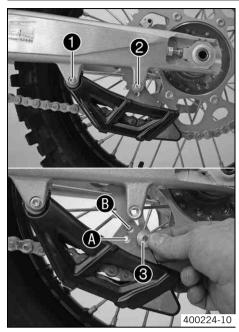

#### Condition

Number of teeth:  $\geq$  45 teeth

- Insert nut **③** in hole **④**. Position the chain guide.
- Mount and tighten screws **1** and **2**.
  - Guideline

Remaining screws, chassis	M6	10 Nm
_		(7.4 lbf ft)

#### Adjusting the chain guide 🔌 (SX-F)

Loosen screw 1. Remove screw 2. Push the chain guide down.

#### Condition

\_

Number of teeth:  $\leq$  44 teeth

- Insert collar sleeve ③ in hole ④. Position the chain guide.
- Mount and tighten screw ②. Tighten screw ①.
   Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
---------------------------	----	-----------------------

#### Condition

Number of teeth:  $\geq$  45 teeth

- Insert collar sleeve 
   in hole
   B. Position the chain guide.
- Mount and tighten screw **2**. Tighten screw **1**.

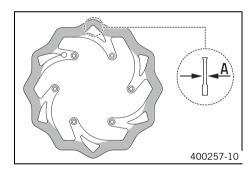

Remaining screws, chassis	M6	10 Nm
		(7.4 lbf ft)

#### **Checking brake discs**

Warning

**Danger of accidents** Reduced braking efficiency due to worn brake disc(s).

Change the worn brake disc(s) without delay. (Your authorized KTM workshop will be glad to help.)

Check the thickness of the front and rear brake discs at several places on the disk to see if it conforms to measurement **(a)**.

Wear reduces the thickness of the brake disc around the area used by the brake linings.

Brake discs - wear limit	
Front	2.5 mm (0.098 in)
Rear	3.5 mm (0.138 in)

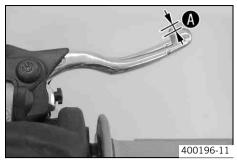

- » If the brake disc thickness is less than the specified value:
  - Change the brake disc.
- Check the front and rear brake discs for damage, cracking and deformation.
  - » If the brake disc shows signs of damage, cracking or deformation:
    - Change the brake disc.

#### Checking free travel of hand brake lever

# Warning Danger of accidents Brake system failure.

 If there is no free travel on the hand brake lever, pressure builds up in the front brake circuit. The front brake can fail due to overheating. Adjust free travel on hand brake lever according to specifications.

#### (XCF-W, SX-F)

Free travel of hand brake lever	≥ 3 mm (≥ 0.12 in)

- If the free travel does not meet specifications:
  - adjust the basic position of hand brake lever. (\* p. 62)

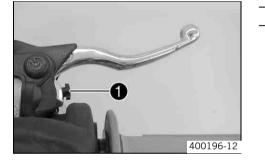

#### (EXC-F, EXC-F SIX DAYS)

– Push the hand brake to the handlebar and check free travel **()**.

Free travel of hand brake lever	≥ 3 mm (≥ 0.12 in)	
If the free travel does not meet specifications:		

- Adjust the free travel of the hand brake lever. ( p. 62)

#### Adjusting basic position of hand brake lever (XCF-W, SX-F)

- Check the free travel of the hand brake lever. (\* p. 61)
- Adjust the basic setting of the hand brake lever to your hand size by turning adjusting screw ①.

#### Info

Turn the adjusting screw clockwise to increase the distance between the hand brake lever and the handlebar.
Turn the adjusting screw counterclockwise to decrease the distance between the hand brake lever and the handlebar.
The range of adjustment is limited.
Turn the adjusting screw by hand only, and do not apply any force.
Do not make any adjustments while riding!

#### Adjusting free travel of hand brake lever (EXC-F, EXC-F SIX DAYS)

- Check the free travel of the hand brake lever. ( $\P$  p. 61)
- Adjust the free travel of the hand brake lever with adjusting screw  $oldsymbol{0}$ .

#### Info

-	
	Turn the adjustment screw clockwise to reduce free travel. The pressure
	point moves away from the handlebar.
	Turn the adjustment screw counterclockwise to increase free travel. The
	pressure point moves towards the handlebar.
	The range of adjustment is limited.
	Turn the adjusting screw by hand only, and do not apply any force.
	Do not make any adjustments while riding!

#### Checking the brake fluid level of the front brake

#### Warning

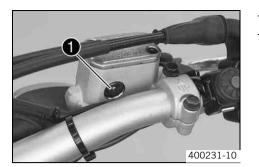

Danger of accidents Failure of the brake system.

- If the brake fluid level falls below the **MIN** mark, this indicates a leakage in the brake system or worn-out brake linings. Check the brake system and do not continue riding. (Your authorized KTM workshop will be glad to help.)

Danger of accidents Reduced braking effect caused by old brake fluid.

 Change the brake fluid of the front and rear brakes according to the service schedule. (Your authorized KTM workshop will be glad to help.)

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Check the brake fluid level in viewer **①**.
- » If the brake fluid is below the MIN mark:
  - Top up the brake fluid of the front brake. 🔌 (🕶 p. 63)

#### Topping up the front brake fluid 🔧

### Warning

**Danger of accidents** Failure of the brake system.

 If the brake fluid level falls below the MIN mark, this indicates a leakage in the brake system or worn-out brake linings. Check the brake system and do not continue riding. (Your authorized KTM workshop will be glad to help.)

#### Warning

Skin irritation Brake fluid can cause skin irritation on contact.

- Avoid contact with skin and eyes, and keep out of the reach of children.
- Wear suitable protective clothing and goggles.
- If brake fluid gets into your eyes, rinse thoroughly with water and contact a doctor immediately.

#### Warning

Danger of accidents Reduced braking effect caused by old brake fluid.

 Change the brake fluid of the front and rear brakes according to the service schedule. (Your authorized KTM workshop will be glad to help.)

#### Warning

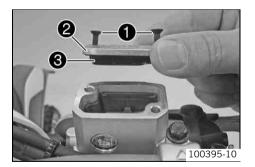

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

#### Info

Never user DOT 5 brake fluid! This is based on silicone oil and is colored purple. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid is corrosive! Use only clean brake fluid from a sealed container!

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws 1.
- Remove cover **2** with membrane **3**.
- Add brake fluid to level 🚯.

Guideline

Measurement of 🛽	5 mm (0.2 in)
Brake fluid DOT 4 / DOT 5.1 (* p. 116)	

Position the cover with the membrane. Mount and tighten the screws.

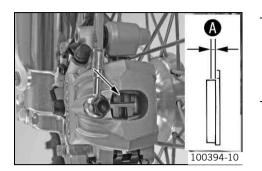

Clean up overflowed or spilt brake fluid immediately with water.

#### Checking the front brake linings

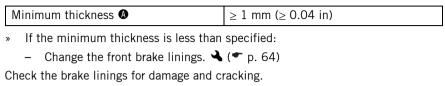

Warning

- Danger of accidents Reduced braking efficiency caused by worn brake linings.
- Change worn brake linings immediately. (Your authorized KTM workshop will be glad to help.)

Check the brake linings for minimum thickness ().

- If damage or cracking is visible:
  - Change the front brake linings. 🔌 (🕶 p. 64)

#### Changing the front brake linings 🔧

Danger of accident Brake system failure.

Maintenance work and repairs must be carried out professionally. (Your authorized KTM workshop will be glad to help.)

#### Warning

Warning

**Skin irritation** Brake fluid can cause skin irritation on contact.

- Avoid contact with skin and eyes, and keep out of the reach of children.
- Wear suitable protective clothing and goggles.
- If brake fluid gets into your eyes, rinse thoroughly with water and contact a doctor immediately.

#### Warning

**Danger of accidents** Reduced braking effect caused by old brake fluid.

Change the brake fluid of the front and rear brakes according to the service schedule. (Your authorized KTM workshop will be glad to help.)

### Warning

**Danger of accidents** Reduced braking efficiency due to oil or grease on the brake discs.

Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.

#### Warning

**Danger of accidents** Reduced braking efficiency due to use of non-approved brake linings.

Brake linings available from accessory suppliers are often not tested and approved for use on KTM vehicles. The construction and friction factor of the brake linings and therefore the brake power can differ considerably from the original KTM brake linings. If brake linings are used that differ from the originals, there is no guarantee that they comply with the original license. The vehicle no longer corresponds to the condition at delivery, and the warranty is no longer valid.

Warning

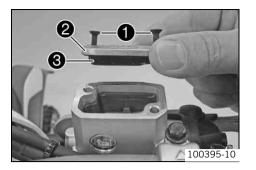

**Environmental hazard** Hazardous substances cause environmental damage.

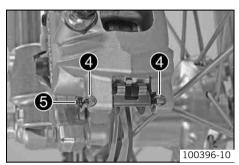

Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

#### Info

Never user DOT 5 brake fluid! This is based on silicone oil and is colored purple. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint! Use only clean brake fluid from a sealed container!

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws ①.
- Remove cover 2 with membrane 3.
- Press the brake caliper onto the brake disc by hand in order to push back the brake pistons. Ensure that brake fluid does not overflow from the brake fluid reservoir, using suction to remove it if it does.

Make sure when pushing back the brake pistons that you do not press the brake caliper against the spokes.

- Remove locking split pins 4, withdraw bolt 5, and take out the brake linings.
- Clean the brake caliper and brake caliper support.

Check that leaf spring 
 in the brake caliper and sliding plate 
 in the brake caliper support are seated correctly.

- Fit the brake linings, insert the bolt, and mount the locking split pins.
- Operate the hand brake lever repeatedly until the brake linings lie on the brake disc and there is a pressure point.
- Correct the brake fluid quantity to level 

   Correct the brake fluid quantity to level
   Correct the brake fluid quantity to level

#### Guideline

100398-10

100399-10

Measurement of	5 mm (0.2 in)	
Brake fluid DOT 4 / DOT 5.1 (* p. 116)		
- Desition the second side the mean have a Manut and tighter the second		

Position the cover with the membrane. Mount and tighten the screws.

Clean up overflowed or spilt brake fluid immediately with water.

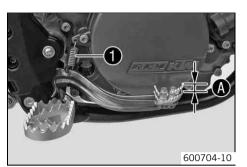

#### Checking free travel of foot brake lever

Warning

**Danger of accidents** Brake system failure.

- If there is no free travel on the foot brake lever, pressure builds up on the rear brake circuit. The rear brake can fail due to overheating. Adjust free travel on foot brake lever according to specifications.

#### Disconnect spring **①**.

Move the foot brake lever backwards and forwards between the end stop and the foot brake cylinder piston bracket and check free travel **(**). Guideline

Free travel at foot brake lever3... 5 mm (0.12... 0.2 in)

If the free travel does not meet specifications:

- Adjust the basic position of the footbrake lever. 🔌 (🕶 p. 66)
- Reconnect spring ①.

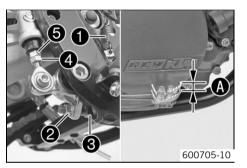

#### Adjusting basic position of footbrake lever 🔧

Warning

Danger of accidents Brake system failure.

- If there is no free travel on the foot brake lever, pressure builds up on the rear brake circuit. The rear brake can fail due to overheating. Adjust free travel on foot brake lever according to specifications.

- Disconnect spring ①.
- Loosen nut ④ and with push rod ⑤, turn it back until you have maximum free travel.
- To adjust the basic position of the foot brake lever individually, lossen nut 2 and turn screw 3 accordingly.

#### Info

The range of adjustment is limited.

Turn push rod G accordingly until you have free travel G. If necessary, adjust the basic position of the footbrake lever.

λu	ide	line	
i u	uc	inic	

G

Free travel at foot brake lever	3 5 mm (0.12 0.2 in)
---------------------------------	----------------------

Guideline

Remaining nuts, chassis	M8	30 Nm (22.1 lbf ft)
-------------------------	----	------------------------

- Hold push rod **5** and tighten nut **4**.

Guideline

Remaining nuts, chassis	M6	15 Nm (11.1 lbf ft)
-------------------------	----	------------------------

Reconnect spring ①.

#### **Checking rear brake fluid level**

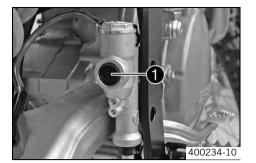

**Danger of accidents** Failure of the brake system.

- If the brake fluid level falls below the **MIN** mark, this indicates a leakage in the brake system or worn-out brake linings. Check the brake system and do not continue riding. (Your authorized KTM workshop will be glad to help.)

- **Danger of accidents** Reduced braking effect caused by old brake fluid.
- Change the brake fluid of the front and rear brakes according to the service schedule. (Your authorized KTM workshop will be glad to help.)

- Stand the vehicle upright.
- Check the brake fluid level in the sight glass lacksquare.
  - » If there is an air bubble in the sight glass  $\bullet$  visible:
    - Add brake fluid to the rear brake circuit. 🔌 (🕶 p. 67)

#### Adding brake fluid to the rear brake circuit 🔧

#### Warning

Danger of accidents Failure of the brake system.

 If the brake fluid level falls below the MIN mark, this indicates a leakage in the brake system or worn-out brake linings. Check the brake system and do not continue riding. (Your authorized KTM workshop will be glad to help.)

#### Warning

Skin irritation Brake fluid can cause skin irritation on contact.

- Avoid contact with skin and eyes, and keep out of the reach of children.
- Wear suitable protective clothing and goggles.
- If brake fluid gets into your eyes, rinse thoroughly with water and contact a doctor immediately.

#### **Warning**

Danger of accidents Reduced braking effect caused by old brake fluid.

 Change the brake fluid of the front and rear brakes according to the service schedule. (Your authorized KTM workshop will be glad to help.)

#### Warning

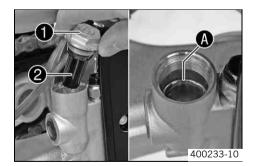

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

#### Info

Never user DOT 5 brake fluid! This is based on silicone oil and is colored purple. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid is corrosive! Use only clean brake fluid from a sealed container!

- Stand the vehicle upright.

- Remove screw cap **1** with membrane **2** and the O-ring.
- Add brake fluid up to level ().

Brake fluid DOT 4 / DOT 5.1 (\* p. 116)

Mount the screw cap with the membrane and the O-ring.

Info

Clean up overflowed or spilt brake fluid immediately with water.

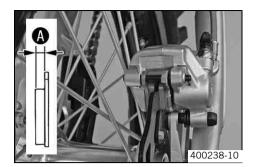

#### **Checking rear brake linings**

#### Warning

Danger of accidents Reduced braking efficiency caused by worn brake linings.

- Change worn brake linings immediately. (Your authorized KTM workshop will be glad to help.)

- Check the brake linings for minimum thickness Ø.

- Change the rear brake linings. 🔌 (🕶 p. 68)
- Check the brake linings for damage and cracking.
- » If damage or cracking is visible:
  - Change the rear brake linings. 🔌 (🕶 p. 68)

#### Changing the rear brake linings 🔧

#### Warning Danger of

Danger of accident Brake system failure.

- Maintenance work and repairs must be carried out professionally. (Your authorized KTM workshop will be glad to help.)

#### Warning

Skin irritation Brake fluid can cause skin irritation on contact.

- Avoid contact with skin and eyes, and keep out of the reach of children.
- Wear suitable protective clothing and goggles.
- If brake fluid gets into your eyes, rinse thoroughly with water and contact a doctor immediately.

### Warning

Danger of accidents Reduced braking effect caused by old brake fluid.

 Change the brake fluid of the front and rear brakes according to the service schedule. (Your authorized KTM workshop will be glad to help.)

#### Warning

Danger of accidents Reduced braking efficiency due to oil or grease on the brake discs.

- Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.

#### Warning

**Danger of accidents** Reduced braking efficiency due to use of non-approved brake linings.

Brake linings available from accessory suppliers are often not tested and approved for use on KTM vehicles. The construction and friction factor of the brake linings and therefore the brake power can differ considerably from the original KTM brake linings. If brake linings are used that differ from the originals, there is no guarantee that they comply with the original license. The vehicle no longer corresponds to the condition at delivery, and the warranty is no longer valid.

#### Warning

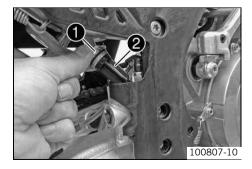

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

### Info

Never user DOT 5 brake fluid! This is based on silicone oil and is colored purple. Oil seals and brake lines are not designed for DOT 5 brake fluid.

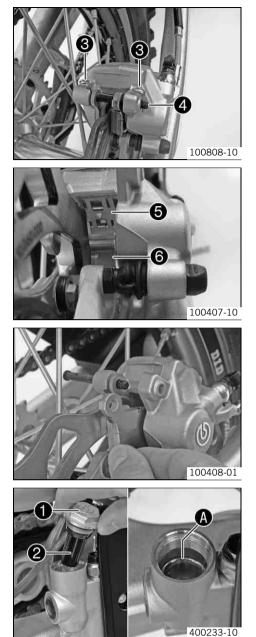

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint! Use only clean brake fluid from a sealed container!

- Stand the vehicle upright.
- Remove screw cap ① with membrane ② and the O-ring.
- Press the brake piston back to its basic position and make sure that no brake fluid overflows from the brake fluid reservoir.

Make sure when pushing back the brake piston that you do not press the brake caliper against the spokes.

Remove locking split pins ③, withdraw bolt ④, and take out the brake linings. Clean the brake caliper and brake caliper support.

Check that leaf spring 
 in the brake caliper and sliding plate 
 in the brake caliper support are seated correctly.

- Fit the brake linings, insert the bolt, and mount the locking split pins.
- Operate the foot brake lever repeatedly until the brake linings lie on the brake disc and there is a pressure point.

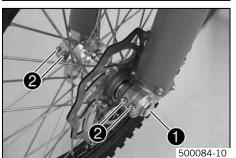

- Mount screw cap  $oldsymbol{0}$  with membrane  $oldsymbol{2}$  and the O-ring.

Clean up overflowed or spilt brake fluid immediately with water.

#### Removing front wheel 🔧

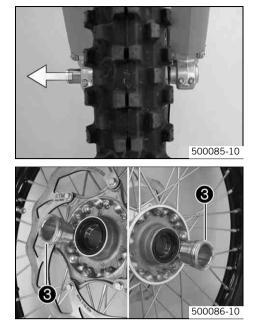

- Jack up the motorcycle. (\* p. 40)
- Press the brake caliper by hand on to the brake disc in order to press back the brake pistons.

#### Info

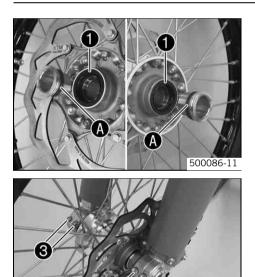

- Make sure when pushing back the brake pistons that you do not press the brake caliper against the spokes.
- Remove screw ①.
- Loosen screw 2.

#### Installing the front wheel 🔧

#### Warning

- Danger of accidents Reduced braking efficiency due to oil or grease on the brake discs.
- Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.

500084-11

2

\_

\_

- Clean and grease shaft seal rings **1** and bearing surface **3** of the spacers.
  - Long-life grease (\* p. 117)
- Insert the spacers.
- Lift the front wheel into the fork, position it, and insert the wheel spindle. \_
  - Mount and tighten screw **2**.

Guideline		
Screw, front wheel spindle	M24x1.5	45 Nm (33.2 lbf ft)

Operate the hand brake lever several times until the brake pads are lying correctly \_ on the brake disc.

- Remove the motorcycle from the work stand. (**\*** p. 40) \_
- Pull the front wheel brake and push down hard on the fork several times to align the fork legs.
- Fully tighten screws **③**. \_

Guideline

Screw, fork stub	M8	15 Nm
		(11.1 lbf ft)

Holding the front wheel, withdraw the wheel spindle. Take the front wheel out of the fork.

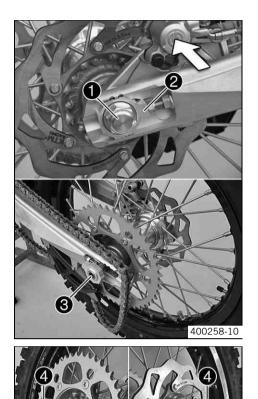

Do not operate the hand brake lever when the front wheel is removed. Always lay the wheel down in such a way that the brake disc is not damaged.

Remove spacers **8**.

Γ

#### Removing the rear wheel 🔌

 Press the brake caliper by hand on to the brake disc in order to press back the brake piston.

#### Info

Make sure when pushing back the brake piston that you do not press the brake caliper against the spokes.

#### Remove nut 1.

- Remove chain adjuster **2**. Withdraw wheel spindle **3** only enough to allow the rear wheel to be pushed forward.
- Push the rear wheel forward as far as possible. Remove the chain from the rear sprocket.
- Holding the rear wheel, withdraw the wheel spindle. Take the rear wheel out of the swingarm.

#### • Info

- Do not operate the foot brake when the rear wheel is removed. Always lay the wheel down in such a way that the brake disc is not damaged.
- Remove spacers 4.

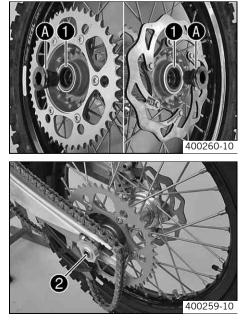

#### Installing the rear wheel 🔧

# Warning

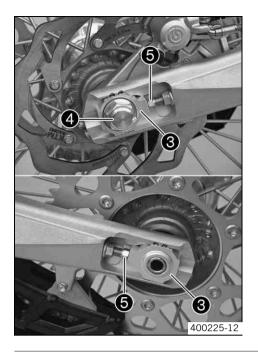

Danger of accidents Reduced braking efficiency due to oil or grease on the brake discs.

400260-11

- Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.

- Clean and grease shaft seal rings ① and bearing surface ③ of the spacers.
   Long-life grease (\* p. 117)
  - Insert the spacers.
- Lift the rear wheel into the swing arm, position it, and insert the wheel spindle 2.
  Put the chain on.

- Position the chain adjuster **③**. Mount nut **④**, but do not tighten it yet.
- Check chain tension when fitting rear wheel. (\* p. 57)
- Make sure that the chain adjusters ③ are fitted correctly on the adjusting screws ⑤.
- Tighten nut 🕘.

#### Guideline

Nut, rear wheel spindle	M20x1.5	80 Nm (59 lbf ft)
-------------------------	---------	-------------------

### Info

The wide adjustment range of the chain adjusters (32 mm) enables different secondary transmissions with the same chain length. The chain adjusters ③ can be turned by 180°.

- Operate the foot brake lever repeatedly until the brake linings lie on the brake disc and there is a pressure point.

### **Tire condition checking**

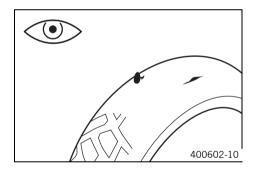

### Info

Only mount tires approved or recommended by KTM.

Other tires could have a negative effect on riding behavior.

The type, condition and air pressure of the tires all have an important impact on the riding behavior of the motorcycle. The front and rear wheels must be mounted with tires with similar profiles.

Worn tires have a negative effect on riding behavior, especially on wet surfaces.

Examine the front and rear tires for cuts, foreign bodies and other damage.

- If you find cuts, foreign bodies or other damage on a tire:
   Change the tires.
- Check the depth of the tread.

#### Info

Note local national regulations concerning the minimum tread depth.

Minimum tread depth	≥ 2 mm (≥ 0.08 in)

- » If the tread depth is less than the minimum allowable depth:
  - Change the tires.
- Check the age of the tires.

#### Info

The tire's date of manufacture is usually part of the tire markings and is indicated by the last four digits of the **DOT** marking. The first two digits refer to the week of manufacture and last two digits refer to the year of manufacture.

KTM recommends that the tires be changed after five years at the latest, regardless of the actual state of wear.

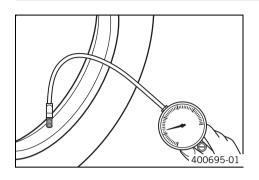

- » If a tire is more than 5 years old:
  - Change the tires.

### **Checking tire air pressure**

# **Info**

Low tire air pressure leads to abnormal wear and overheating of the tire.

- Remove the dust cap.
- Check tire air pressure when tires are cold.

Tire air pressure off road		
Front	1.0 bar (15 psi)	
Rear	1.0 bar (15 psi)	
Road tire pressure (EXC-F, EXC-F SIX DAYS)		
Front	1.5 bar (22 psi)	
Rear	2.0 bar (29 psi)	

- » If the tire pressure does not meet specifications:
- Correct the tire air pressure.
- Fit the dust cap.

### **Checking spoke tension**

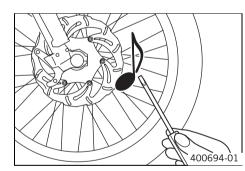

# Warning

Danger of accidents Instable handling due to incorrect spoke tension.

Ensure that the spoke tension is correct. (Your authorized KTM workshop will be glad to help.)

### • Info

A loose spoke can cause wheel imbalance, which leads to more loose spokes in a short time. If the spokes are too tight, they can break due to local overload. Check the spoke tension regularly, especially on a new motorcycle.

Tap each spoke with a screwdriver.

#### Info

The sound frequency depends on the length and thickness of the spoke. If there are different sound frequencies in spokes with the same length and thickness, this indicates different spoke tensions.

#### You should hear a high note.

- If the spoke tension varies:
  - Correct the spoke tension. 🔌
- Check the spoke torque.

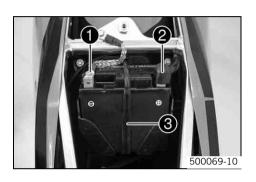

#### Guideline

Spoke nipple, front wheel	M4.5	5 6 Nm (3.7 4.4 lbf ft)
Spoke nipple, rear wheel	M5	5 6 Nm (3.7 4.4 lbf ft)
Torque wrench with various accessories in set (58429094000)		

### Removing the battery 🔌 (EXC-F, EXC-F SIX DAYS, XCF-W)

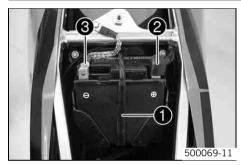

### Warning

- **Risk of injury** Battery acid and battery gases cause serious cauterization.
- Keep batteries out of the reach of children.
- Wear suitable protective clothing and goggles.
- Avoid contact with battery acid and battery gases.
- Keep the battery away from sparks or open fire. Charge only in well ventilated rooms.
- In the event of skin contact, rinse with large amounts of water. If battery acid gets in the eyes, rinse with water for at least 15 minutes and contact a doctor.

- Switch off all power consumers and switch off the engine.
- Disconnect the negative (minus) cable **1** of the battery.
- Pull back the plus pole cover ② and disconnect the positive (plus) cable of the battery.
- Hang the rubber band 🛛 out to the bottom.
- Lift the battery up.

# Installing the battery \land (EXC-F, EXC-F SIX DAYS, XCF-W)

Place the battery in the battery holder.

4Ah battery (YTX5L-BS) (\* p. 100)

- Reconnect the rubber band 1.
- Attach the plus cable and replace the plus pole cover 2.
- Attach the minus cable **③**.

# Recharging the battery \land (EXC-F, EXC-F SIX DAYS, XCF-W)

#### Warning Risk of in

**Risk of injury** Battery acid and battery gases cause serious cauterization.

- Keep batteries out of the reach of children.
- Wear suitable protective clothing and goggles.
- Avoid contact with battery acid and battery gases.
- Keep the battery away from sparks or open fire. Charge only in well ventilated rooms.
- In the event of skin contact, rinse with large amounts of water. If battery acid gets in the eyes, rinse with water for at least 15 minutes and contact a doctor.

Environmental hazard Battery parts and acid are harmful to the environment.

Do not discard batteries with the household trash. Dispose of a defective battery in an environmentally compatible manner.
 Give the battery to your KTM dealer or to a recycling center that accepts used batteries.

#### Warning

Environmental hazard Hazardous substances cause environmental damage.

Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

## Info

Even when there is no load on the battery, it still loses power steadily.

The charge state and the type of charge are very important for the service life of the battery.

Rapid recharging with a high charging current shortens the battery's service life.

If the charging current, charging voltage and charging time are exceeded, electrolyte escapes through the safety valves. This reduces the battery capacity.

If the battery is depleted from starting the vehicle repeatedly, the battery must be charged immediately.

If the battery is left in a discharged state for an extended period, it will become over-discharged and sulfate, destroying the battery.

The battery is maintenance-free, i.e., the acid level does not have to be checked.

- Disconnect the minus (negative) cable of the battery to avoid damage to the motorcycle's electronics.
- Connect the battery charger to the battery. Switch on the battery charger.

Battery charger (58429074000)

You can also use the battery charger to test rest potential and start potential of the battery, and to test the generator. With this device, you cannot overcharge the battery.

#### lnfo

Never remove the lid  $\mathbf{O}$ .

Charge the battery with at most 10% of the capacity specified on the battery  $\boldsymbol{2}$ .

- Switch off the charger after charging. Disconnect the battery.

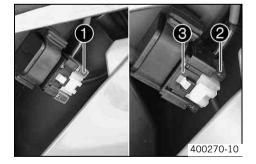

#### Guideline

The charge current, charge voltage and charge time must not be exceeded.Charge the battery regularly when the<br/>motorcycle is not in use3 months

– Mount the seat. (🕶 p. 77)

#### Removing a fuse (EXC-F, EXC-F SIX DAYS, XCF-W)

- Switch off all power consumers and switch off the engine.
- Remove the air filter box lid. (\* p. 81)
- Remove the protection cover  $\mathbf{0}$ .

#### Info

The fuse **2** is located in the starter relay **3** under the filter box cover.

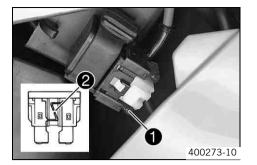

Remove the fuse 2.

### Replacing the fuse (EXC-F, EXC-F SIX DAYS, XCF-W)

#### Warning

Fire hazard The electrical system can be overloaded by the use of incorrect fuses.

- Use only fuses with the prescribed amperage. Never by-pass or repair fuses.

Refit the fuse.

Fuse (58011109110)

#### Info

A reserve fuse **1** is located in the starter relay. Replace a burned-out fuse **2** only by an equivalent fuse. If the new fuse burns out, contact an authorized KTM workshop.

- Replace the protection cover.

Install the air filter box lid. (\* p. 81)

### Adjusting the beam width of the headlight (EXC-F, EXC-F SIX DAYS, XCF-W)

- Check the headlight adjustment. (\* p. 76)
- Loosen screw ①.
- Adjust the light range by swiveling the headlight.

#### Guideline

The boundary between light and dark must be exactly on the lower mark for a motorcycle with a rider (mark is applied under: Checking the headlight adjustment).

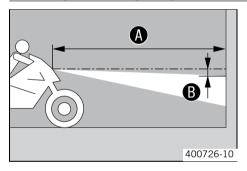

If you have a payload, you may have to correct the headlight beam width.

Tighten screw **①**.

### Checking the headlight adjustment (EXC-F, EXC-F SIX DAYS, XCF-W)

301251-10

- On a light-colored wall behind a horizontal area, make a mark as high as the center of the headlight.
- Make a second mark at distance of **B** under the first mark.

# Guideline

Distance <b>B</b> 5	5 cm (2 in)
---------------------	-------------

Stand the motorcycle upright in front of the wall at distance <sup>(1)</sup>. The driver, in full
protective clothing, should now sit on the motorcycle in a normal sitting position
(feet on the footrests).

# Guideline

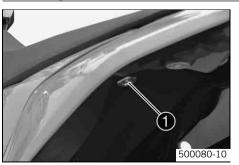

Distance	5 m (16 ft)

Switch on low beam. Check the headlight adjustment.

The border between light and dark must be exactly at the lower mark when the motorcycle is operational and complete with rider.

- If the boundary between light and dark does not meet specifications:

#### **Removing the seat**

Remove screw  $\bullet$ . Lift up the seat at the rear, pull it back and then remove from above.

#### Mounting the seat

- Hook in the front of the seat at the collar sleeve of the fuel tank, lower it at the rear and simultaneously push it forward.
- Make sure that the seat is correctly locked in.
- Mount and tighten the screw of the seat fixing.
   Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)	
---------------------------	----	--------------------	--

#### Dismounting the fuel tank 🔌

# Danger

Fire hazard Fuel is highly flammable.

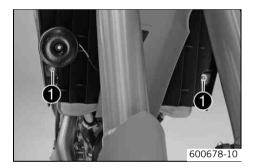

- Never refuel the vehicle near open flames or burning cigarettes, and always switch off the engine first. Be careful that no fuel is spilt, especially on hot vehicle components. Clean up spilt fuel immediately.
- Fuel in the fuel tank expands when warm and can escape if the tank is overfilled. See the notes on refueling.

# Warning

Danger of poisoning Fuel is poisonous and a health hazard.

Avoid contact between fuel and skin, eyes and clothing. Do not inhale fuel vapors. If fuel gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If fuel is swallowed, contact a doctor immediately. Change clothing that has come into contact with fuel. Store fuel in a suitable canister according to regulations and keep it out of the reach of children.

#### (EXC-F, EXC-F SIX DAYS, XCF-W)

Turn handle • of the fuel tap to the OFF position. (Figure 500137-10 • p. 22)
 (SX-F)

- Turn handle **0** of the fuel tap to the **OFF** position. (Figure 500178-10 **\*** p. 22)
- Pull off the fuel hose.

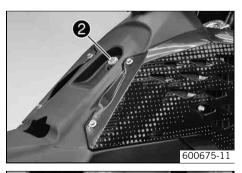

Remaining fuel may flow out of the fuel hose.

− Remove screws ● with the collar sleeve.

#### (EXC-F, EXC-F SIX DAYS)

- Hang the horn and horn bracket to one side.

- Remove screw 2 with the collar sleeve.
- Remove the tube from the fuel tank vent line.

- Pull both spoilers to the side of the radiator bracket ③ and take the fuel tank away upward.

## Installing the fuel tank A

# Danger

**Fire hazard** Fuel is highly flammable.

- Never refuel the vehicle near open flames or burning cigarettes, and always switch off the engine first. Be careful that no fuel is spilt, especially on hot vehicle components. Clean up spilt fuel immediately.
- Fuel in the fuel tank expands when warm and can escape if the tank is overfilled. See the notes on refueling.

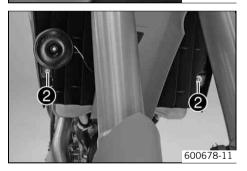

# Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

Avoid contact of the fuel with skin, eyes and clothing. Do not inhale fuel vapors. If fuel gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If fuel is swallowed, contact a doctor immediately. Change clothing that has come into contact with fuel.

Position the fuel tank and fit the two spoilers to the sides of the radiator bracket.

- Mount the fuel tank vent hose.
- Mount and tighten screw 
   with the collar sleeve.
   Guideline

Make sure that no cables are trapped or damaged.

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
---------------------------	----	--------------------

#### (EXC-F, EXC-F SIX DAYS)

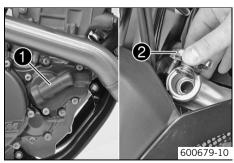

- Position the horn with the horn bracket.

- Mount and tighten screws **2** with the collar sleeve.

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)

Connect the fuel hose.

# **Cooling system**

The water pump **1** in the engine forces the coolant to flow.

The pressure resulting from the warming of the cooling system is regulated by a valve in the radiator cap @. This ensures that operating the vehicle at the specified coolant temperature will not result in a risk of malfunctions.

120 °C (248 °F)

Cooling is effected by the air stream.

The lower the speed, the less the cooling effect. Dirty cooling fins also reduce the cooling effect.

#### (XCF-W, 250 EXC-F SIX DAYS EU)

The radiator fan provides extra cooling. It is controlled by a thermoswitch.

#### Checking the anti-freeze and coolant level

#### Warning Danger of

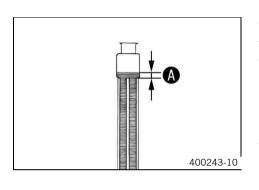

Danger of scalding During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not remove the radiator cap, radiator hoses or other cooling system components when the engine is hot. Allow the engine and cooling system to cool down. In case of scalding, rinse immediately with lukewarm water.

Warning

#### **Danger of poisoning** Coolant is poisonous and a health hazard.

Avoid contact between coolant and skin, eyes and clothing. If it gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If coolant is swallowed, contact a doctor immediately. Change clothes that have come into contact with coolants. Keep coolant out of the reach of children.

#### Condition

Engine is cold.

- Stand the motorcycle upright on a horizontal surface.
- Remove radiator cap.
- Check the anti-freeze of the coolant.

-	–25 –45 °C (–13 –49 °F)
»	If the anti-freeze of the coolant does not meet specifications:
	<ul> <li>Correct the anti-freeze of the coolant.</li> </ul>

Check the coolant level in the radiator.

Coolant level 🛽 above radiator fins.	10 mm (0.39 in)

- If the level of the coolant does not meet specifications:
  - Correct the coolant level.

#### Alternative 1

Coolant (\* p. 116)

#### Alternative 2

Coolant (mixed ready to use) (\* p. 116)

Refit the radiator cap.

### **Checking the coolant level**

#### Warning Danger of

**Danger of scalding** During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not remove the radiator cap, radiator hoses or other cooling system components when the engine is hot. Allow the engine and cooling system to cool down. In case of scalding, rinse immediately with lukewarm water.

# Warning

**Danger of poisoning** Coolant is poisonous and a health hazard.

Avoid contact between coolant and skin, eyes and clothing. If it gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If coolant is swallowed, contact a doctor immediately. Change clothes that have come into contact with coolants. Keep coolant out of the reach of children.

### Condition

The engine is cold.

- Stand the motorcycle upright on a horizontal surface.
- Remove radiator cap.
- Check the coolant level in the radiator.

Coolant level      above the radiator fins.	10 mm (0.39 in)
» If the coolant level does not meet spec	cifications:
<ul> <li>Correct the coolant level.</li> </ul>	
Alternative 1	

Coolant (\* p. 116)

#### Alternative 2

Coolant (mixed ready to use) (\* p. 116)

Mount the radiator cap.

#### Draining the coolant 🔧

# Warning

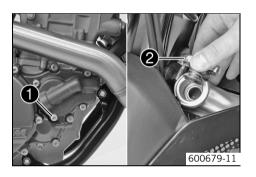

Danger of scalding During motorcycle operation, the coolant gets very hot and is under pressure.

Do not remove the radiator cap, radiator hoses or other cooling system components when the engine is hot. Allow the
engine and cooling system to cool down. In case of scalding, rinse immediately with lukewarm water.

#### Warning Danger of

Danger of poisoning Coolant is poisonous and a health hazard.

 Avoid contact between coolant and skin, eyes and clothing. If it gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If coolant is swallowed, contact a doctor immediately. Change clothes that have come into contact with coolants. Keep coolant out of the reach of children.

### Condition

The engine is cold.

- Stand the vehicle upright.
- Place a suitable container under the water pump cover.
- Remove screw **1**. Remove radiator cap **2**.
- Completely drain the coolant.

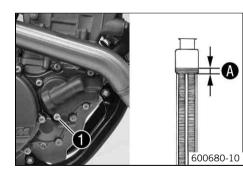

Screw, water pump cover	M6	10 Nm (7.4 lbf ft)
-------------------------	----	--------------------

### Refilling coolant 🔧

# Warning

**Danger of poisoning** Coolant is poisonous and a health hazard.

Avoid contact between coolant and skin, eyes and clothing. If it gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If coolant is swallowed, contact a doctor immediately. Change clothes that have come into contact with coolants. Keep coolant out of the reach of children.

_	Make	sure	that	the	screw	0	is	tightened.
---	------	------	------	-----	-------	---	----	------------

- Stand the vehicle upright.
- Pour coolant in up to measurement () above the radiator fins.

Guideline		
10 mm (0.39 in)		
Coolant	1.2   (1.3 qt.)	Coolant (🕶 p. 116)
		Coolant (mixed ready to use) (

- Refit the radiator cap.
- Make a short test ride.
- Check the coolant level. (\* p. 79)

### Glass fiber yarn filling of main silencer

The main silencer is filled with glass fiber yarn.

Over a period, the fibers of the insulating material vanish into the air, and the silencer "burns out". Not only is the noise level higher, the performance characteristic changes.

### **Removing main silencer**

# Warning

Danger of burns The exhaust system gets very hot when the vehicle is driven.

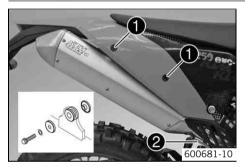

- Allow the exhaust system to cool down. Do not touch hot components.

- Remove screws 2 and take off main silencer.

### Installing the main silencer

Mount the main silencer. Mount and tighten screws ①.
 Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
Basannast anring <b>A</b>		

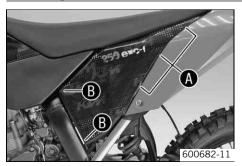

Reconnect spring 2.

### Removing the air filter box lid

- Pull off the air filter box lid in area () to the side and remove to the front.

### Installing the air filter box lid

- Insert the air filter box lid into the rear area (1) and clip it into the front area (3).

### Removing the air filter 🔧

### Note

- **Engine failure** Unfiltered intake air has a negative effect on the service life of the engine.
- Never ride the vehicle without an air filter since dust and dirt can get into the engine and result in increased wear.

### Warning

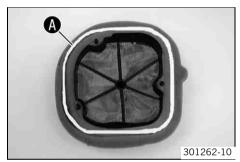

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

- Remove the air filter box lid. (\* p. 81)
- Remove the air filter from the air filter support.

### Installing the air filter 🔧

- Mount the clean air filter onto the air filter support.
- Apply grease to the section (a) of the air filter.

Long-life grease (🕶 p. 117)

- Put in both parts together, position them and fix them with air filter holder  $oldsymbol{0}$ .
  - Info

If the air filter is not correctly mounted, dust and dirt can penetrate into the engine and can cause damage.

Install the air filter box lid. (\* p. 81)

### Cleaning air filter 🔧

Warning

**Environmental hazard** Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

# **Info**

Do not clean the air filter with fuel or gasoline since these substances attack the foam.

- Remove the air filter. 🔌 (🕶 p. 82)
- Wash the air filter thoroughly in special cleaning liquid and allow it to dry properly.

Air filter cleaner (🕶 p. 117)

# • Info

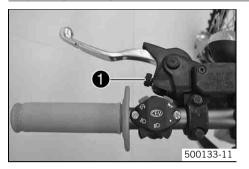

Only squeeze the air filter when drying it out, never wring it out.

- Oil the dry air filter with a high/quality filter oil.

Oil for foam air filter (\* p. 117)

- Clean the air filter box.
- Check carburetor connection boot for damage and tightness.
- Install the air filter. 🔌 (🕶 p. 82)

### Adjusting basic position of clutch lever

Adjust the basic setting of the clutch lever to your hand size by turning adjusting screw  $\bullet$ .

#### Info

Turn the adjusting screw clockwise to increase the distance between the clutch lever and the handlebar.
 Turn the adjusting screw counterclockwise to decrease the distance between the clutch lever and the handlebar.
 The range of adjustment is limited.
 Turn the adjusting screw by hand only, and do not apply any force.
 Do not make any adjustments while riding!

# Checking the fluid level of hydraulic clutch

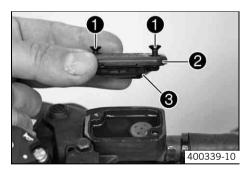

Warning

Skin irritation Brake fluid can cause skin irritation on contact.

- Avoid contact with skin and eyes, and keep out of the reach of children.
- Wear suitable protective clothing and goggles.
- If brake fluid gets into your eyes, rinse thoroughly with water and contact a doctor immediately.

# linfo

The fluid level rises with increasing wear of the clutch lining disc. Avoid contact between brake fluid and painted parts. Brake fluid is corrosive! Use only clean brake fluid from a sealed container!

- Move the clutch fluid reservoir mounted on the handlebar to a horizontal position.
  - Remove screws ①.
  - Remove cover 2 with membrane 3.
  - · Check the fluid level.

Fluid level under top level of container 4 mm (0.16 in)

- » If the level of the fluid does not meet specifications:
  - Correct the fluid level of the hydraulic clutch.

Brake fluid DOT 4 / DOT 5.1 (\* p. 116)

- Position the cover with the membrane. Mount and tighten the screws.

# • Info

Clean up overflowed or spilt fluid immediately with water.

# Changing the hydraulic clutch fluid 🔧

#### Warning Skin irrita

Skin irritation Brake fluid can cause skin irritation on contact.

- Avoid contact with skin and eyes, and keep out of the reach of children.
- Wear suitable protective clothing and goggles.
- If brake fluid gets into your eyes, rinse thoroughly with water and contact a doctor immediately.

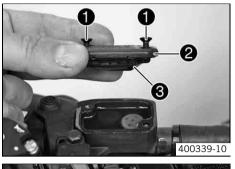

# 

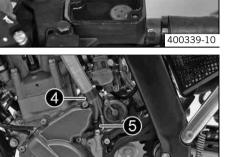

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

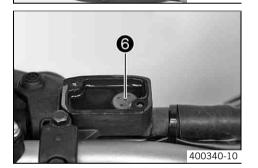

# Info

### The fluid level rises with increasing wear of the clutch lining disc. Avoid contact between brake fluid and painted parts. Brake fluid is corrosive! Use only clean brake fluid from a sealed container!

500683-10

- Move the clutch fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws ①.
- Remove cover **2** with membrane **3**.

- Fill bleeding syringe **4** with the appropriate hydraulic fluid.

Bleed syringe (50329050000)	
Brake fluid DOT 4 / DOT 5.1 (* p. 116)	

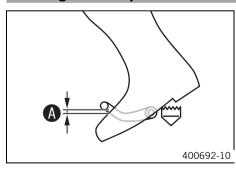

- On the slave cylinder, remove bleeder screw 6 and mount bleeding syringe 4.
- Inject the liquid into the system until it escapes from bore hole <sup>(6)</sup> of the master cylinder without bubbles.
- To prevent overflow, drain fluid occasionally from the master cylinder reservoir.
- Remove the bleeding syringe. Mount and tighten screws bleeder screw.
- Correct the fluid level of the hydraulic clutch. Guideline

Fluid level under top level of container 4 mm (0.16 in)

Position the cover with the membrane. Mount and tighten the screws.

Clean up overflowed or spilt fluid immediately with water.

#### Checking the basic position of the shift lever

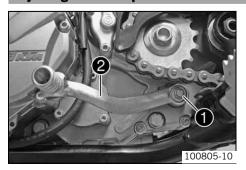

Sit on the vehicle (facing the direction of travel) and measure the gap between the top of the boot and shift lever 0.

Gap between the shift lever and the top	10 20 mm (0.39 0.79 in)
of the boot	

- If the distance does not meet the specifications:
  - Adjust the basic position of the shift lever. 

     (\* p. 84)

### Adjusting the basic position of the shift lever 🔧

- Remove screw **1** and remove shift lever **2**.

<u>84</u>

- Clean gear teeth 🛽 of the shift lever and shift shaft.
- Mount the shift lever on the shift shaft in the required position and engage the gearing.
- Mount and tighten the screw.

#### Guideline

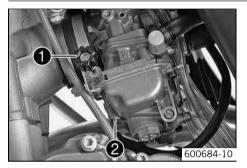

Screw, shift lever M6 10 Nm (7.4 lbf ft) Loctite <sup>®</sup> 243™
--

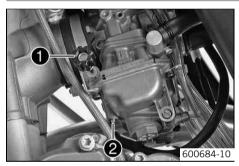

The range of adjustment is limited.

The shift lever must not come into contact with any other vehicle components during the shift procedure.

### **Carburetor - idle**

### Carburetor - adjusting idle 🔌

The idle setting of the carburetor has a big influence on the starting behavior, stable idling and the response to throttle opening. That means that an engine with a correctly set idle speed is easier to start than if the idle is set wrongly.

The carburetor and its components are subject to increased wear caused by engine vibration. Wear can result in malfunctioning.

The idle speed is adjusted with the adjustment screw ①. The idle mixture is adjusted with the idle mixture adjustment screw ②.

Screw in the idle adjusting screw ② until it stops and then to the prescribed basic setting.
 Guideline

Guideinie		
Idle mixture adjusting screw (EXC-F, EXC-F SIX DAYS, SX-F)		
Open	1.25 turns	
Idle mixture adjusting screw (XCF-W)		
Open	1.0 turn	
Adjustment tool for mixture control screw (77329034000)		

- Run the engine until warm.

#### Guideline

Warm-up time $\geq 5 min$ 

#### Danger

**Danger of poisoning** Exhaust gases are poisonous and inhaling them may result in unconsciousness and/or death.

- When running the engine, always make sure there is sufficient ventilation, and do not start or run the engine in an enclosed space without an effective exhaust extraction system.
- Adjust the idle speed with adjusting screw •.

#### Guideline

Choke function deactivated – The choke lever is pushed in to the stop. (XCF-W, SX-F, EXC-F AUS) (  , 23)		
Choke function deactivated – The choke lever is pushed back to the stop. (EXC-F EU, EXC-F SIX DAYS) ( P. 23)		
Idle speed	1,400 1,500 rpm	

- Turn the idle adjusting screw **2** slowly until the idle speed begins to fall.
- Note the position and turn the idle adjusting screw slowly counterclockwise until the idle speed falls.

Adjust to the point between these two positions with the highest idle speed.

# 1.....

•	Into
	If there is a big engine speed rise, reduce the idle speed to a normal level and repeat the above steps.
	The extreme sport motorcyclist will set the mixture about ¼ of a turn back from this ideal value (leaner, in a clockwise direction) since the engine becomes hotter in sporting use. If the procedure described here does not lead to satisfactory results, the
	cause may be a wrongly dimensioned idling jet. If you can turn the idle adjusting screw to the end without any change of engine speed, you have to mount a smaller idling jet. The idle adjusting screw must not be opened more than two turns. If more than two turns are necessary (rich mixture), use a larger idling jet. After changing the idling jet, start from the beginning with the adjusting steps.
Adjus	t the idle speed with adjusting screw $ullet$ .
Guide	line
Chal	ve function departivated. The above lower is nuclead in to the stop (VCE W

Choke function deactivated – The choke lever is pushed in to the stop. (XCF-W, SX-F, EXC-F AUS) (\* p. 23) Choke function deactivated - The choke lever is pushed back to the stop. (EXC-F EU, EXC-F SIX DAYS) (\* p. 23)

Idle speed

1,400... 1,500 rpm

# Info

Following extreme air temperature or altitude changes, adjust the idle speed again.

#### Emptying the carburetor float chamber Վ

#### Danger

Fire hazard Fuel is highly flammable.

- Never refuel the vehicle near open flames or burning cigarettes, and always switch off the engine first. Be careful that no fuel is spilt, especially on hot vehicle components. Clean up spilt fuel immediately.
- Fuel in the fuel tank expands when warm and can escape if the tank is overfilled. See the notes on refueling.

### Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

Avoid contact between fuel and skin, eyes and clothing. Do not inhale fuel vapors. If fuel gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If fuel is swallowed, contact a doctor immediately. Change clothing that has come into contact with fuel. Store fuel in a suitable canister according to regulations and keep it out of the reach of children.

# Warning

Environmental hazard Improper handling of fuel is a danger to the environment.

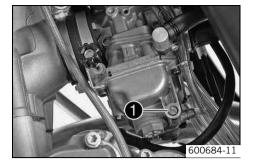

Do not allow fuel to get into the ground water, the ground, or the sewage system.

# Info

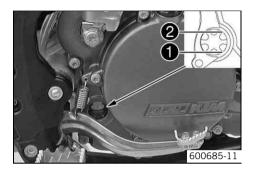

Carry out this work with a cold engine.

#### (EXC-F, EXC-F SIX DAYS, XCF-W)

- Turn handle **1** of the fuel tap to the **OFF** position. (Figure 500137-10 **\*** p. 22) (SX-F)
  - Turn handle **0** of the fuel tap to the **OFF** position. (Figure 500178-10 p. 22)
    - No more fuel flows from the tank to the carburetor.

### Checking the engine oil level

Guide the hose coming down behind the engine into a suitable container.

- Water in the float chamber results in malfunctioning.
- Undo screw **1** (turn it counterclockwise) a few turns and drain the fuel from the float chamber.
- Tighten screw 1.
- Stand the motorcycle upright on a horizontal surface.

#### Condition

#### The engine is cold.

- Check the engine oil level.

The engine oil level is at the bottom edge of level viewer $0$ .
The engine on level is at the bottom edge of level viewer $\Psi$ .

> If the engine oil level is below the specified level:

– Add engine oil. (🕶 p. 90)

#### Condition

The engine is warm.

- Check the engine oil level.

The engine oil level is at the top edge of level viewer  $\boldsymbol{2}$ .

- If the engine oil level is below the specified level:
  - Add engine oil. (🕶 p. 90)

### Changing the engine oil and oil filter, cleaning the oil screen $\checkmark$

- Drain the engine oil. 🔌 (🕶 p. 87)
- Clean the oil screens. 🔌 (🕶 p. 88)
- Remove the oil filter. 🔌 (🕶 p. 89)
- Install the oil filter. 🔌 (🕶 p. 89)
- 🛛 Fill up with engine oil. 🔌 (🕶 p. 90)

#### Draining the engine oil 🔧

#### Warning

- Danger of scalding Engine oil and gear oil get very hot when the motorcycle is ridden.
- Wear appropriate protective clothing and safety gloves. In case of burns, rinse immediately with lukewarm water.

# Warning

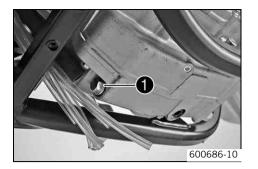

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

# **Info**

Drain the engine oil only when the engine is warm.

- Stand the motorcycle on its side stand on a horizontal surface.

- Place a suitable container under the engine.
- Remove oil drain plug **①**.
- Completely drain the engine oil.
- Thoroughly clean the oil drain plug with the magnet.
- Clean the sealing area on the engine.

Oil drain plug with magnet	M12x1.5	20 Nm (14.8 lbf ft)
----------------------------	---------	------------------------

# Cleaning the oil screens $\boldsymbol{\prec}$

### Warning

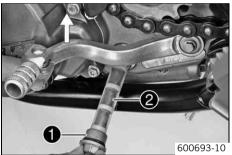

- Wear appropriate protective clothing and safety gloves. In case of burns, rinse immediately with lukewarm water.

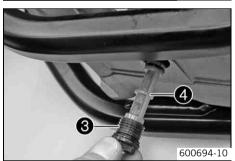

### Warning

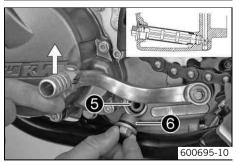

- **Environmental hazard** Hazardous substances cause environmental damage.
  - Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

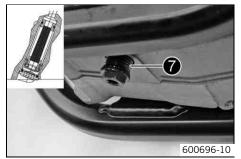

- Place a suitable container under the engine.
- Remove plug **①** with oil screen **②** and the O-rings.

- Remove plug  ${\ensuremath{\mathfrak{O}}}$  with oil screen  ${\ensuremath{\mathfrak{O}}}$  and the O-rings.
- Drain the remaining engine oil.
- Thoroughly clean parts and sealing area.

– Position oil screen **6** with the O-rings.

# Mount and tighten plug with the O-ring. Guideline

Plug for oil screen, long	M20x1.5	15 Nm (11.1 lbf ft)
---------------------------	---------	------------------------

### - Position the oil screen with the O-rings.

Mount and tighten plug with the O-ring.
 Guideline

dalaointo			
Plug for oil screen, short	M16x1.5	10 Nm (7.4 lbf ft)	lubricated with engine oil

# Removing the oil filter 🔌

#### Warning Danger of

**Danger of scalding** Engine oil and gear oil get very hot when the motorcycle is ridden.

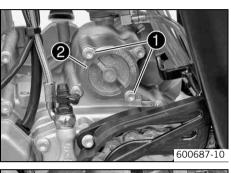

- Wear appropriate protective clothing and safety gloves. In case of burns, rinse immediately with lukewarm water.

# Warning

Environmental hazard Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

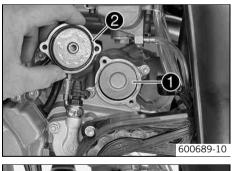

- Place a suitable container under the engine.
- Remove screws 1. Remove oil filter cover 2 with the O-ring.

- Pull the oil filter insert **3** out of the oil filter casing.

Circlip pliers reverse (51012011000)

- Completely drain the engine oil.
- Thoroughly clean parts and sealing surface.

# Installing the oil filter 🔧

- Lay the motorcycle on its side and fill the oil filter housing to about  $1\!\!\!/_3$  full with engine oil.
- Fill oil filter **1** with engine oil and place it in the oil filter container.
- Lubricate O-ring ② of the oil filter cover.

- Mount oil filter cover 6.
- Mount and tighten screws ④.
   Guideline

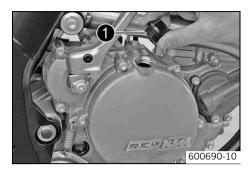

Screv	w, oil filter cover	M5	6 Nm (4.4 lbf ft)
-------	---------------------	----	-------------------

- Stand the motorcycle up.

### Filling up with engine oil 🔧

Info

Too little engine oil or poor-quality engine oil results in premature wear to the engine.

-	Remove screw conne	n cover and fill up with engine oil.	
	Engine oil	1.10 I (1.16 qt.)	Engine oil (SAE 10W/50) (🕶 p. 116)

Mount and tighten screw cap 1.

Danger of poisoning Exhaust gases are poisonous and inhaling them may result in unconsciousness and/or death.

- When running the engine, always make sure there is sufficient ventilation, and do not start or run the engine in an enclosed space without an effective exhaust extraction system.
- Start the engine and check that it is oil-tight.
- Check the engine oil level. ( p. 87)

#### Adding engine oil

## Info

Too little engine oil or poor-quality engine oil results in premature wear to the engine.

- Remove screw cap **1** from the clutch cover and fill up with engine oil.
- Engine oil (SAE 10W/50) (\* p. 116)
- Mount and tighten screw cap **1**.

**Danger of poisoning** Exhaust gases are poisonous and inhaling them may result in unconsciousness and/or death.

- When running the engine, always make sure there is sufficient ventilation, and do not start or run the engine in an enclosed space without an effective exhaust extraction system.
- Start the engine and check that it is oil-tight.
- Check the engine oil level. (\* p. 87)

# TROUBLESHOOTING

Faults	Possible cause	Action

# **CLEANING**

# **Cleaning the motorcycle**

# Note

Material damage Damage and destruction of components by high-pressure cleaning equipment.

 Never clean the vehicle with high-pressure cleaning equipment or a strong water-jet. The excessive pressure can penetrate electrical components, socket connects, throttle cables, and bearings, etc., and can damage or destroy these parts.

#### Warning Environme

**Environmental hazard** Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

### Info

If you clean the motorcycle regularly, its value and appearance are maintained over a long period. Avoid direct sunlight on the motorcycle during cleaning.

- Close off the exhaust system to prevent water from entering.
- First remove coarse dirt particles with a gentle water spray.
- Spray very dirty areas with a normal motorcycle cleaner and then clean with a soft brush.

Motorcycle cleaner (\* p. 117)

# • Info

Use warm water containing normal motorcycle cleaner and a soft sponge.

- After rinsing the motorcycle with a gentle water spray, allow it to dry thoroughly.
- Empty the carburetor float chamber. 🔌 (🕶 p. 86)

# Warning

Danger of accidents Reduced braking efficiency due to wet or dirty brakes.

- Clean or dry dirty or wet brakes by riding and braking gently.
- After cleaning, take a short ride until the engine reaches operating temperature.

# Info

The heat produced causes water at inaccessible positions in the engine and the brakes to evaporate.

- Push back the protective covers from the handlebar armatures to allow any water that may have entered there to evaporate.

- After the motorcycle has cooled off, oil or grease all moving parts and bearings.
- Clean the chain. (🕶 p. 56)
- Treat bare metal parts (except for brake discs and exhaust system) with anti-corrosion materials.

Cleaning and polishing materials for metal, rubber and plastic (\* p. 117)

- Treat all plastic parts and powder-coated parts with a mild cleaning and care product.

Cleaning and polishing materials for metal, rubber and plastic (\* p. 117)

- To prevent electrical problems, treat electric contacts and switches with contact spray.

Contact spray (
 p. 117)

#### (EXC-F, EXC-F SIX DAYS)

Lubricate the steering lock.

Universal oil spray (\* p. 118)

# **STORAGE**

Warning

#### Storage

Danger of poisoning Fuel is poisonous and a health hazard.

Avoid contact between fuel and skin, eyes and clothing. Do not inhale fuel vapors. If fuel gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If fuel is swallowed, contact a doctor immediately. Change clothing that has come into contact with fuel. Store fuel in a suitable canister according to regulations and keep it out of the reach of children.

### Info

If you want to garage the motorcycle for a longer period, take the following actions. Before storing the motorcycle, check all parts for function and wear. If service, repairs or replacements are necessary, you should do this during the storage period (less workshop overload). In this way, you can avoid long workshop waiting times at the start of the new season.

- Change the engine oil and oil filter, clean the oil screen. 🔌 (🕶 p. 87)
- Check the anti-freeze and coolant level. ( p. 79)
- Drain the fuel from the tank into a suitable container.
- Empty the carburetor float chamber. 🔌 (🕶 p. 86)
- Check the tire air pressure. (**\*** p. 73)

### (EXC-F, EXC-F SIX DAYS, XCF-W)

– Remove the battery. 🔌 (🕶 p. 74)

#### (EXC-F, EXC-F SIX DAYS, XCF-W)

- Recharge the battery. A (\* p. 74)
  - Guideline

Storage temperature of battery without direct sunlight. 0... 35 °C (32... 95 °F)

The storage place should be dry and not subject to large temperature fluctuations.

### Info

KTM recommends jacking up the motorcycle.

- Cover the motorcycle with a porous sheet or blanket. Do not use non-porous materials since they prevent humidity from escaping, thus causing corrosion.

#### Info

Avoid running the engine for a short time only. Since the engine cannot warm up properly, the water vapor produced during combustion condenses and causes valves and exhaust system to rust.

#### Putting into operation after storage

- Remove the motorcycle from the work stand. (\* p. 40)

#### (EXC-F, EXC-F SIX DAYS, XCF-W)

- − Install the battery. ◀ (♥ p. 74)
- Refuel. (🕶 p. 33)
- Take a test ride.

Oil jet, conrod lubrication	M4		Loctite <sup>®</sup> 243™
Oil jet for cam lever lubrication	M5	4 Nm (3 lbf ft)	Loctite <sup>®</sup> 243™
Screw, freewheel hub	M5	7 Nm (5.2 lbf ft)	Loctite <sup>®</sup> 243™
Screw, ignition pulse generator	M5	6 Nm (4.4 lbf ft)	Loctite <sup>®</sup> 243™
Screw, locking lever	M5	6 Nm (4.4 lbf ft)	Loctite <sup>®</sup> 243™
Screw, oil filter cover	M5	6 Nm (4.4 lbf ft)	_
Screw, oil pump cover	M5	6 Nm (4.4 lbf ft)	Loctite <sup>®</sup> 243™
Screw, stator bracket (SX-F)	M5	6 Nm (4.4 lbf ft)	Loctite <sup>®</sup> 243™
Locking screw for bearing	M6	6 Nm (4.4 lbf ft)	Loctite <sup>®</sup> 243™
Screw, cable holder in generator cover	M6	6 Nm (4.4 lbf ft)	Loctite <sup>®</sup> 243™
Screw, clutch cover	M6	10 Nm (7.4 lbf ft)	_
Screw, clutch slave cylinder	M6	10 Nm (7.4 lbf ft)	_
Screw, clutch spring	M6	10 Nm (7.4 lbf ft)	_
Screw, cover plate of valve cover	M6	3 Nm (2.2 lbf ft)	Loctite <sup>®</sup> 243™
Screw, cylinder head	M6	10 Nm (7.4 lbf ft)	_
Screw, engine housing	M6	10 Nm (7.4 lbf ft)	-
Screw, exhaust flange	M6	10 Nm (7.4 lbf ft)	Loctite <sup>®</sup> 243™
Screw, generator cover	M6	10 Nm (7.4 lbf ft)	-
Screw, kickstarter stop	M6	10 Nm (7.4 lbf ft)	Loctite <sup>®</sup> 243™
Screw, shift drum locating	M6	10 Nm (7.4 lbf ft)	Loctite <sup>®</sup> 243™
Screw, shift lever	M6	10 Nm (7.4 lbf ft)	Loctite <sup>®</sup> 243™
Screw, starter motor (EXC-F, EXC-F SIX DAYS, XCF-W)	M6	10 Nm (7.4 lbf ft)	-
Screw, stator bracket (EXC-F, EXC-F SIX DAYS, XCF-W)	M6	8 Nm (5.9 lbf ft)	Loctite <sup>®</sup> 243™
Screw, timing chain securing guide	M6	10 Nm (7.4 lbf ft)	Loctite <sup>®</sup> 243™
Screw, timing chain tensioning rail	M6	10 Nm (7.4 lbf ft)	Loctite <sup>®</sup> 243™
Screw, valve cover	M6	10 Nm (7.4 lbf ft)	-
Screw, water pump cover	M6	10 Nm (7.4 lbf ft)	-
Oil jet, piston cooling	M6x0.75	4 Nm (3 lbf ft)	Loctite <sup>®</sup> 243™
Nut, camshaft bearing bridge	M7	15 Nm (11.1 lbf ft)	lubricated with engine oil
Screw, camshaft bearing bridge	M7	15 Nm (11.1 lbf ft)	lubricated with engine oil
Stud, camshaft bearing bridge	M7		Loctite <sup>®</sup> 243™
Plug, crankshaft location	M8	20 Nm (14.8 lbf ft)	-
Screw, kickstarter	M8	25 Nm (18.4 lbf ft)	Loctite <sup>®</sup> 243™
Screw, timing chain guide rail	M8	10 Nm (7.4 lbf ft)	Loctite <sup>®</sup> 243™
Screw, cylinder head	M10	Tightening sequence: Tighten diagonally, begin- ning with the rear screw on the chain shaft. Step 1 40 Nm (29.5 lbf ft) Step 2 50 Nm (36.9 lbf ft)	lubricated with engine oil
Screw, engine sprocket	M10	60 Nm (44.3 lbf ft)	Loctite <sup>®</sup> 243™
Spark plug	M10	10 12 Nm (7.4 8.9 lbf ft)	-
Screw, unlocking of timing chain ten- sioner	M10x1	10 Nm (7.4 lbf ft)	-
Nut, rotor	M12x1	60 Nm (44.3 lbf ft)	-
Screw, camshaft gear	M12x1	80 Nm (59 lbf ft)	Loctite <sup>®</sup> 243™
Oil drain plug with magnet	M12x1.5	20 Nm (14.8 lbf ft)	-
Plug, oil pressure regulator valve	M12x1.5	20 Nm (14.8 lbf ft)	-
Plug for oil screen, short	M16x1.5	10 Nm (7.4 lbf ft)	lubricated with engine oil

# TECHNICAL DATA - ENGINE TIGHTENING TORQUES

Nut, inner clutch hub	M18x1.5	120 Nm (88.5 lbf ft)	Loctite <sup>®</sup> 243™
Nut, primary gear	M18LHx1.5	150 Nm (110.6 lbf ft)	Loctite <sup>®</sup> 243™
Plug for oil screen, long	M20x1.5	15 Nm (11.1 lbf ft)	-
Plug, timing chain tensioner	M24x1.5	25 Nm (18.4 lbf ft)	-

# **TECHNICAL DATA - CARBURETOR**

### Brake fluid DOT 4 / DOT 5.1

### according to

#### – DOT

#### Guideline

Use only brake fluid that complies with the specified standards (see specifications on the container) and that possesses the corresponding properties. KTM recommends Castrol and Motorex<sup>®</sup> products.

#### Supplier Castrol

#### - RESPONSE BRAKE FLUID SUPER DOT 4

#### **Motorex**®

Brake Fluid DOT 5.1

#### Coolant

#### Guideline

 Use only suitable coolant (also in countries with high temperatures). Use of low-quality antifreeze can lead to corrosion and foaming. KTM recommends Motorex<sup>®</sup> products.

#### Mixture ratio

Antifreeze protection: -2545 °C (-13	50 % corrosion inhibitor/antifreeze
–49 °F)	50 % distilled water

#### **Coolant (mixed ready to use)**

Antifreeze	-40 °C (-40 °F)

#### Supplier

#### Motorex®

#### Anti Freeze

#### Engine oil (SAE 10W/50)

#### according to

- JASO T903 MA (🕶 p. 119)
- SAE (🕶 p. 119) (SAE 10W/50)

#### Guideline

Use only engine oils that comply with the specified standards (see specifications on the container) and that possess the corresponding properties. KTM recommends Motorex<sup>®</sup> products.

Synthetic engine oil

#### Supplier

#### **Motorex**®

- Cross Power 4T

### Fork oil (SAE 5)

#### according to

– SAE (🕶 p. 119) (SAE 5)

#### Guideline

Use only oils that comply with the specified standards (see specifications on the container) and that possess the corresponding properties. KTM recommends Motorex<sup>®</sup> products.

#### Supplier

#### Motorex®

Racing Fork Oil

#### Super unleaded (ROZ 95 / RON 95 / PON 91)

#### according to

- DIN EN 228 (ROZ 95 / RON 95 / PON 91)

# **AUXILIARY SUBSTANCES**

#### Air filter cleaner

#### Guideline

- KTM recommends Motorex® products.

### Supplier

#### Motorex®

– Twin Air Dirt Bio Remover

### **Chain cleaner**

#### Guideline

KTM recommends Motorex<sup>®</sup> products.

### Supplier

- Motorex®
- Chain Clean 611

# Cleaning and polishing materials for metal, rubber and plastic

#### Guideline

KTM recommends Motorex<sup>®</sup> products.

# Supplier

### Motorex<sup>®</sup>

Protect & Shine 645

### **Contact spray**

#### Guideline

- KTM recommends Motorex® products.

# Supplier

- Motorex<sup>®</sup>
- Accu Contact

# Long-life grease

### Guideline

KTM recommends Motorex<sup>®</sup> products.

#### Supplier

- Motorex<sup>®</sup>
- Fett 2000

# **Motorcycle cleaner**

#### Guideline

KTM recommends Motorex<sup>®</sup> products.

#### Supplier

Motorex®

# Moto Clean 900

# **Off-road chain spray**

#### Guideline

 KTM recommends Motorex<sup>®</sup> products.
 Supplier Motorex<sup>®</sup>
 Chain Lube 622

#### **Oil for foam air filter**

#### Guideline

KTM recommends Motorex<sup>®</sup> products.

# **Universal oil spray**

### Guideline

KTM recommends Motorex<sup>®</sup> products.

# Supplier

Motorex<sup>®</sup>

- Joker 440 Universal

### **JASO T903 MA**

Different technical development directions required a new specification for 4-stroke motorcycles – the JASO T903 MA Standard. Earlier, engine oils from the automobile industry were used for 4-stroke motorcycles because there was no separate motorcycle specification. Whereas long service intervals are demanded for automobile engines, high performance at high engine speeds are in the foreground for motorcycle engines. With most motorcycles, the gearbox and the clutch are lubricated with the same oil as the engine. The JASO MA Standard meets these special requirements.

### SAE

The SAE viscosity classes were defined by the Society of Automotive Engineers and are used for classifying oils according to their viscosity. The viscosity describes only one property of oil and says nothing about quality.
