## **OWNER'S MANUAL 2019**

## 125 SX 150 SX

Art. no. 3213847en

Congratulations on your decision to purchase a KTM motorcycle. You are now the owner of a state-of-the-art sports motorcycle that will give you enormous pleasure if you service and maintain it properly.

We hope you enjoy riding this motorcycle!

Enter the serial numbers of your vehicle below.

Chassis number (🕮 p. 13)	Dealer's stamp
Engine number (📖 p. 13)	

The Owner's Manual contained the latest information for this model series at the time of going to print. However, minor differences due to further developments in design cannot be ruled out completely.

All specifications are non-binding. KTM Sportmotorcycle GmbH specifically reserves the right to modify or delete technical specifications, prices, colors, forms, materials, services, designs, equipment, etc., without prior notice and without specifying reasons, to adapt these to local conditions, as well as to stop production of a particular model without prior notice. KTM accepts no liability for delivery options, deviations from figures and descriptions, misprints, and other errors. The models portrayed partly contain special equipment that does not belong to the regular scope of supply.

## 1.1 Symbols used

The meani	ng of specific symbols is described below.
	Indicates an expected reaction (e.g. of a work step or a function).
X	Indicates an unexpected reaction (e.g. of a work step or a function).
4	All work marked with this symbol requires specialist knowledge and technical understanding. In the interest of your own safety, have these jobs performed by an authorized KTM workshop! Your motorcycle will be optimally cared for there by specially trained experts using the auxiliary tools required.
	Indicates a page reference (more information is provided on the specified page).
i	Indicates information with more details or tips.
<b>»</b>	Indicates the result of a testing step.
V	Indicates a voltage measurement.
A	Indicates a current measurement.
•	Indicates the end of an activity, including potential rework.

The typographical formats used in this document are explained below.

Proprietary name	Indicates a proprietary name.
Name®	Indicates a protected name.
Brand™	Indicates a brand available on the open market.
Underlined terms	Refer to technical details of the vehicle or indicate technical terms, which are explained in the glossary.

#### 2.1 Use definition – intended use

This vehicle is designed and built to withstand the normal stresses and strains of competitive use. This vehicle complies with the currently valid regulations and categories of the top international motorsports organizations.

Only operate this vehicle in closed-off areas remote from public road traffic.

#### 2.2 Misuse

The vehicle must only be used as intended.

Dangers can arise for people, property and the environment through use not as intended. Any use of the vehicle beyond the intended and defined use constitutes misuse.

Misuse also includes the use of operating and auxiliary fluids which do not meet the required specification for the respective use.

#### 2.3 Safety advice

A number of safety instructions need to be followed to operate the product described safely. Therefore read this instruction and all further instructions included carefully. The safety instructions are highlighted in the text and are referred to at the relevant passages.

#### • Info Vario

Various information and warning labels are attached in prominent locations on the product described. Do not remove any information or warning labels. If they are missing, you or others may not recognize dangers and may therefore be injured.

#### 2.4 Degrees of risk and symbols

#### Danger

Identifies a danger that will immediately and invariably lead to fatal or serious permanent injury if the appropriate measures are not taken.

## Warning

Identifies a danger that is likely to lead to fatal or serious injury if the appropriate measures are not taken.

#### Caution

Identifies a danger that may lead to minor injuries if the appropriate measures are not taken.

#### Note

Identifies a danger that will lead to considerable machine and material damage if the appropriate measures are not taken.

### Note

Indicates a danger that will lead to environmental damage if the appropriate measures are not taken.

#### 2.5 Tampering warning

Tampering with the noise control system is prohibited. Federal law prohibits the following acts or the causing thereof:

- 1 The removal or rendering inoperative by any person other than for purposes of maintenance, repair, or replacement, of any device or element of design incorporated into any new vehicle for the purpose of noise control prior to its sale or delivery to the ultimate purchaser or while it is in use, or
- 2 the use of the vehicle after such device or element of design has been removed or rendered inoperative by any person.

Among those acts presumed to constitute tampering are the acts listed below:

- 1 Removal or puncturing of the main silencer, baffles, header pipes or any other components which conduct exhaust gases.
- 2 Removal or puncturing of parts of the intake system.
- 3 Lack of proper maintenance.
- 4 Replacing moving part of the vehicle, or parts of the exhaust or intake system, with parts other than those specified by the manufacturer.

#### 2.6 Safe operation

#### Danger

Danger of accidents A rider who is not fit to ride poses a danger to him or herself and others.

- Do not operate the vehicle if you are not fit to ride due to alcohol, drugs or medication.
- Do not operate the vehicle if you are physically or mentally impaired.

#### Danger

Danger of poisoning Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.

#### Warning

Danger of burns Some vehicle components become very hot when the vehicle is operated.

- Do not touch any parts such as the exhaust system, radiator, engine, shock absorber, or brake system before the vehicle parts have cooled down.
- Let the vehicle parts cool down before you perform any work on the vehicle.

Only operate the vehicle when it is in perfect technical condition, in accordance with its intended use, and in a safe and environmentally compatible manner.

The vehicle should only be used by trained persons.

Have malfunctions that impair safety promptly eliminated by an authorized KTM workshop.

Adhere to the information and warning labels on the vehicle.

#### 2.7 Protective clothing

### Warning

Risk of injury Missing or poor protective clothing presents an increased safety risk.

- Wear appropriate protective clothing such as helmet, boots, gloves as well as trousers and a jacket with protectors on all rides.
- Always wear protective clothing that is in good condition and meets the legal regulations.

In the interest of your own safety, KTM recommends that you only operate the vehicle while wearing protective clothing.

#### 2.8 Work rules

Special tools are necessary for certain tasks. The tools are not a component of the vehicle, but can be ordered using the number in parentheses. Example: bearing puller (15112017000)

During assembly, use new parts to replace parts which cannot be reused (e.g. self-locking screws and nuts, seals, sealing rings, O-rings, pins, and lock washers).

In the case of certain screws, a thread locker (e.g. Loctite<sup>®</sup>) is required. Apply according to the manufacturer's instructions.

After disassembly, clean the parts that are to be reused and check them for damage and wear. Change damaged or worn parts.

After completing a repair or service work, check the operating safety of the vehicle.

#### 2.9 Environment

If you use your motorcycle responsibly, you can ensure that problems and conflicts do not occur. To protect the future of the motorcycle sport, make sure that you use your motorcycle legally, display environmental consciousness, and respect the rights of others.

When disposing of used oil, other operating and auxiliary fluids, and used components, comply with the laws and regulations of the respective country.

Because motorcycles are not subject to the EU regulations governing the disposal of used vehicles, there are no legal regulations that pertain to the disposal of an end-of-life motorcycle. Your authorized KTM dealer will be glad to advise you.

#### 2.10 Owner's Manual

It is important that you read this Owner's Manual carefully and completely before making your first trip. The Owner's Manual contains useful information and many tips on how to operate, handle, and maintain your motorcycle. Only then will you find out how to customize the vehicle ideally for your own use and how you can protect yourself from injury.

Keep the Owner's Manual in an accessible place to enable you to refer to it as needed.

If you would like to know more about the vehicle or have questions on the material you read, please contact an authorized KTM dealer.

The Owner's Manual is an important component of the vehicle and must be handed over to the new owner if the vehicle is sold.

The Owner's Manual is also available for download from your authorized KTM dealer and on the KTM website. International KTM Website: http://www.ktm.com

#### 3.1 Manufacturer and implied warranty

The work specified in the service schedule may only be performed in an authorized KTM workshop and must be recorded in both the Service & Warranty Booklet and in **KTM Dealer.net**, otherwise any warranty coverage will become void. Damage or secondary damage caused by tampering with and/or conversions on the vehicle are not covered by the warranty.

Additional information on the manufacturer or implied warranty and the procedures involved can be found in the Service & Warranty Booklet.

#### 3.2 Operating and auxiliary substances

#### 🖌 Note

**Environmental hazard** Improper handling of fuel is a danger to the environment.

- Do not allow fuel to enter the groundwater, the soil, or the sewage system.

Use operating and auxiliary substances in accordance with the Owner's Manual and specification.

#### 3.3 Spare parts, accessories

For your own safety, only use spare parts and accessory products that are approved and/or recommended by KTM and have them installed by an authorized KTM workshop. KTM accepts no liability for other products and any resulting damage or loss.

Certain spare parts and accessory products are specified in parentheses in the descriptions. Your authorized KTM dealer will be glad to advise you.

The current **KTM PowerParts** for your vehicle can be found on the KTM website. International KTM Website: http://www.ktm.com

#### 3.4 Service

A prerequisite for perfect operation and prevention of premature wear is that the service, care, and tuning work on the engine and chassis is properly carried out as described in the Owner's Manual. Incorrect adjustment and tuning of the engine and chassis can lead to damage and breakage of components.

Use of the vehicle under difficult conditions, such as on sand or on wet and muddy surfaces, can lead to considerably more rapid wear of components such as the drive train, brake system, or suspension components. For this reason, it may be necessary to inspect or replace parts before the next scheduled service.

It is imperative that you adhere to the stipulated run-in times and service intervals. If you observe these exactly, you will ensure a much longer service life for your motorcycle.

#### 3.5 Figures

The figures contained in the manual may depict special equipment.

In the interest of clarity, some components may be shown disassembled or may not be shown at all. It is not always necessary to disassemble the component to perform the activity in question. Please follow the instructions in the text.

#### 3.6 Customer service

Your authorized KTM dealer will be happy to answer any questions you may have on your vehicle and KTM.

# **3 IMPORTANT NOTES**

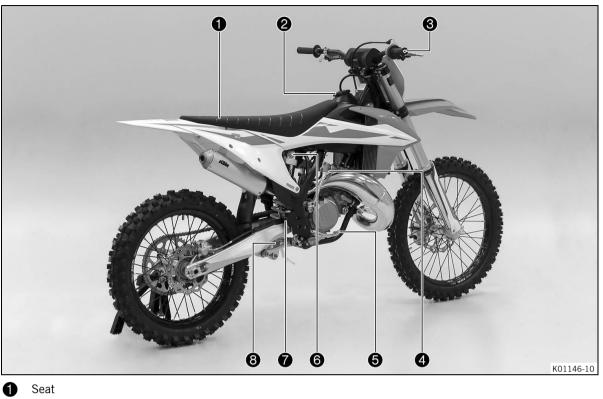

A list of authorized KTM dealers can be found on the KTM website. International KTM Website: http://www.ktm.com 4.1 View of vehicle, front left (example)

- Hand brake lever (
  p. 15)
- **2** Kill switch (🕮 p. 15)
- 3 Clutch lever (🕮 p. 15)
- 4 Air filter box cover
- **5** Plug-in stand
- 6 Shift lever (🕮 p. 17)
- 7 Choke (🕮 p. 17)
- 8 Fuel tap

## **4 VIEW OF VEHICLE**

View of vehicle, rear right (example) 4.2

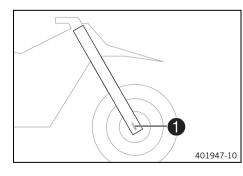

- 0 Filler cap
- 6 Throttle grip (🕮 p. 15)
- 4 Kick starter (🕮 p. 18)
- 5 Foot brake lever (🕮 p. 18)
- 6 Shock absorber compression adjustment
- 1 Level viewer for brake fluid, rear
- 8 Shock absorber rebound adjustment

## SERIAL NUMBERS 5

# 5.1 **Chassis number** The chassis number 1 is stamped on the right side of the steering head. 1 401945-10 5.2 Type label The type label **1** is fixed to the front of the steering head. 1 401946-10 5.3 **Engine number** The engine number **1** is stamped on the left side of the engine under the engine sprocket. \*0.3 \*0.3

5.4 Fork part number

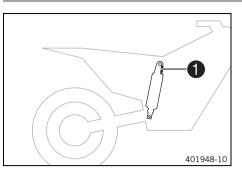

401949-10

The fork part number **1** is stamped on the inside of the axle clamp.

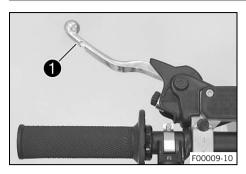

# **5 SERIAL NUMBERS**

## 5.5 Shock absorber article number

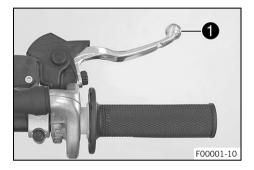

Shock absorber article number **1** is stamped on the top of the shock absorber above the adjusting ring towards the engine side.

## 6.1 Clutch lever

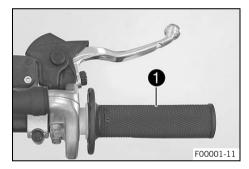

Clutch lever **1** is fitted on the handlebar on the left. The clutch is activated hydraulically and adjusts itself automatically.

### 6.2 Hand brake lever

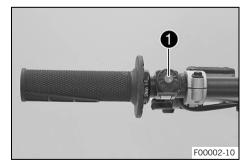

Hand brake lever  $\bigcirc$  is fitted on the right side of the handlebar. The front brake is engaged using the hand brake lever.

#### 6.3 Throttle grip

Throttle grip **1** is fitted on the right side of the handlebar.

#### 6.4 Kill switch

The kill switch **1** is fitted on the left side of the handlebar. **Possible states** 

- Kill switch ⊗ in basic position In this position, the ignition circuit is closed, and the engine can be started.
- Kill switch ⊗ pressed In this position, the ignition circuit is interrupted, a running engine stops, and a non-running engine will not start.

#### 6.5 Opening the filler cap

## Danger

**Fire hazard** Fuel is highly flammable.

- The fuel in the fuel tank expands when warm and can escape if overfilled.
- Do not refuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

## **N**

## Warning

Danger of poisoning Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.
- Keep fuels correctly in a suitable canister, and out of the reach of children.

#### k Note

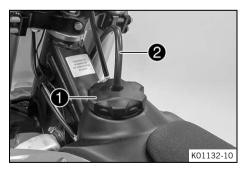

**Environmental hazard** Improper handling of fuel is a danger to the environment.

- Do not allow fuel to enter the groundwater, the soil, or the sewage system.

• Turn filler cap **①** counterclockwise and lift it off.

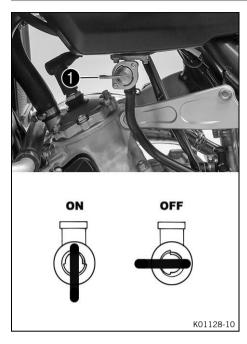

6.6 Closing the filler cap

- Mount filler cap ① and turn it clockwise until the fuel tank is tightly closed.
  - Info

#### 6.7 Fuel tap

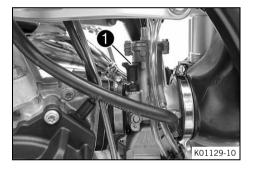

The fuel tap is on the left side of the fuel tank. Open or close the fuel supply to the carburetor using tap handle 1 on the fuel tap.

#### **Possible states**

- Fuel supply closed **OFF** Fuel cannot flow from the fuel tank to the carburetor.
- Open fuel supply **ON** Fuel can flow from the fuel tank to the carburetor. The fuel tank empties completely.

#### 6.8 Choke

Choke **1** is fitted on the left side of the carburetor. Activating the choke function frees a drill hole in the carburetor through which the engine can draw extra fuel. This results in a richer fuel-air mixture, which is needed for a cold start.

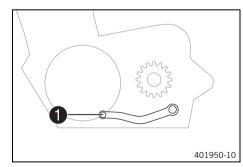

#### Info

If the engine is warm, the choke function must be deactivated.

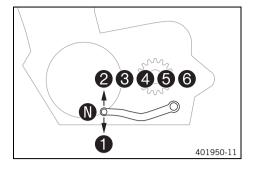

#### **Possible states**

- Choke function activated The choke lever is pulled out to the stop.
- Choke function deactivated The choke lever is pushed in to the stop.

#### 6.9 Shift lever

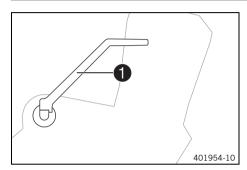

Shift lever **1** is mounted on the left of the engine.

The gear positions can be seen in the photograph. The neutral or idle position is between the first and second gears.

6.10 Kick starter

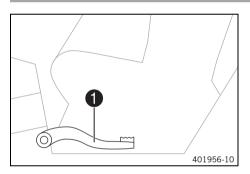

Kick starter **1** is fitted on the right side of the engine. The top part of the kick starter pivots.

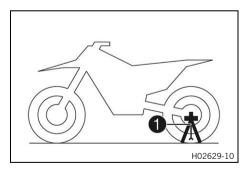

Before riding, swing the top part of the kick starter inward toward the engine.

6.11 Foot brake lever

Foot brake lever **1** is located in front of the right footrest. The foot brake lever is used to activate the rear brake.

## 6.12 Plug-in stand

The holder for the plug-in stand **1** is the left side of the wheel spindle.

The plug-in stand is used to park the motorcycle.

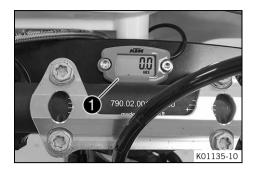

The plug-in stand is used as a fork locker when transporting the motorcycle.

#### Info

Remove the plug-in stand before riding.

## 6.13 Service hour counter

The service hour counter ① is fitted in front of the handlebar. It shows the total number of service hours of the engine. The service hour counter begins counting when the engine is started and stops when the engine is switched off.

### Info

i

It is not possible to delete or adjust anything on the service hour counter.

#### 7.1 Advice on first use

## Danger

- **Danger of accidents** A rider who is not fit to ride poses a danger to him or herself and others.
- Do not operate the vehicle if you are not fit to ride due to alcohol, drugs or medication.
- Do not operate the vehicle if you are physically or mentally impaired.

#### Warning

**Risk of injury** Missing or poor protective clothing presents an increased safety risk.

- Wear appropriate protective clothing such as helmet, boots, gloves as well as trousers and a jacket with protectors on all rides.
- Always wear protective clothing that is in good condition and meets the legal regulations.

**Danger of crashing** Different tire tread patterns on the front and rear wheel impair the handling characteristic.

Different tire tread patterns can make the vehicle significantly more difficult to control.

Make sure that only tires with a similar tire tread pattern are fitted to the front and rear wheel.

#### Warning

Danger of accidents An unadapted riding style impairs the handling characteristic.

- Adapt your riding speed to the road conditions and your riding ability.

### Warning

Danger of accidents The vehicle is not designed to carry passengers.

Do not ride with a passenger.

#### Warning

**Danger of accidents** The brake system fails in the event of overheating.

If the foot brake lever is not released, the brake linings drag continuously.

- Take your foot off the foot brake lever when you are not braking.

#### Warning

Danger of accidents Total weight and axle loads influence the handling characteristic.

- Do not exceed the maximum permissible overall weight or the axle loads.

#### Warning

Risk of misappropriation People who act without authorization endanger themselves and others.

- Do not leave the vehicle unattended if the engine is running.
- Protect the vehicle against access by unauthorized persons.

#### Info

When using your motorcycle, remember that others may feel disturbed by excessive noise.

Make sure that the pre-delivery inspection work has been carried out by an authorized KTM workshop.

- $\checkmark$  You receive a delivery certificate and the Service and Warranty Booklet at vehicle handover.
- Before your first trip, read the entire Owner's Manual carefully.
- Get to know the controls.

- Adjust the basic position of the foot brake lever.  $\checkmark$  (1) p. 83) \_
- Set the basic position of the shift lever. 🔌 (🕮 p. 105)
- Get used to handling the motorcycle on a suitable surface before undertaking a more challenging trip. \_

#### Info

•

Your motorcycle is not approved for use on public roads.

When off road, it is recommended that you are accompanied by another person on another vehicle so that you can help each other.

- Try also to ride as slowly as possible and in a standing position to get a better feeling for the motorcycle. \_
- Do not make any off-road trips that exceed your ability and experience.
- Hold the handlebar firmly with both hands and keep your feet on the footrests when riding. \_
- Do not take luggage along.
- Do not exceed the maximum permissible weight and the maximum permissible axle loads. Guideline

Maximum permissible overall weight	335 kg (739 lb.)
Maximum permissible front axle load	145 kg (320 lb.)
Maximum permissible rear axle load	190 kg (419 lb.)

Check the spoke tension. (I p. 94)

## Info

The spoke tension must be checked after half an hour of operation.

Run in the engine. (🕮 p. 21)

#### 7.2 Running in the engine

During the running-in phase, do not exceed the specified engine performance. \_

Guideline

Maximum engine performance	
During the first 3 operating hours	< 70 %
During the first 5 operating hours	< 100 %

Avoid fully opening the throttle! \_

7.3 Preparing the vehicle for difficult operating conditions

#### Info

Use of the vehicle under difficult conditions, such as on sand or on wet and muddy circuits/surfaces, can lead to considerably more rapid wear of components such as the drive train, brake system, or suspension components. For this reason, it may be necessary to inspect or replace parts before the next scheduled service.

- Prepare air filter box cover for securing.  $\checkmark$  (🕮 p. 62)
- Clean the air filter and air filter box. 🔌 (🕮 p. 61)

Check the air filter approx. every 30 minutes.

Check the electrical connector for humidity and corrosion and to ensure it is firmly seated.

» If humidity, corrosion, or damage is found:

\_

- Clean and dry the connector, or change it if necessary.

Make sure that no radiator covers are installed.

#### Difficult operating conditions are:

- Rides on wet sand. (🕮 p. 23)
- Rides on wet and muddy circuits. (
  P. 25)
- Riding at low temperatures and in snow. (
  p. 26)

## 7.4 Preparing vehicle for rides on dry sand

Check the radiator cap.

_		
Value on the radiator cap		1.8 bar (26 psi)
»	If the indicated value does r value:	not correspond to the setpoint

### Warning

**Danger of scalding** During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

Mount a dust cover on the air filter.

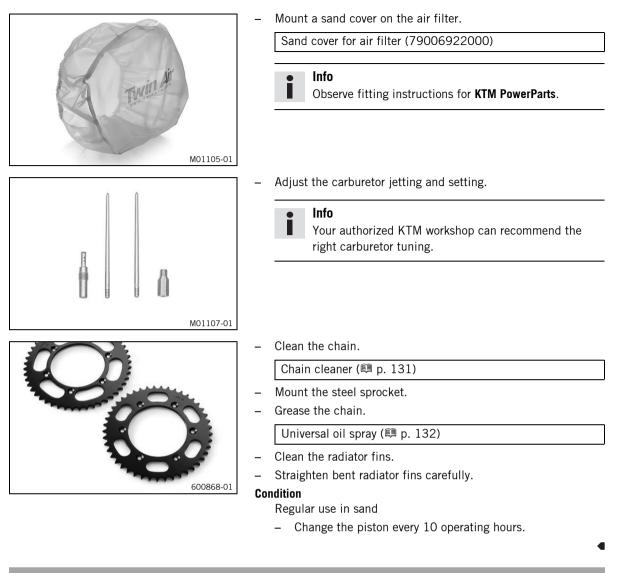

Dust cover for air filter (79006920000)

### lnfo

Observe fitting instructions for **KTM PowerParts**.

## PREPARING FOR USE 7

## 7.5 Preparing vehicle for rides on wet sand

- Check the radiator cap.

Value	e on the radiator cap	1.8 bar (26 psi)
-		

» If the indicated value does not correspond to the setpoint value:

## Warning

Danger of scalding During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.
- Change the radiator cap. \_
- Fit a rain cover on the air filter.

Waterproofing device for air filter (79006921000)

- Info
- Observe fitting instructions for KTM PowerParts.
- Adjust the carburetor jetting and setting.

Your authorized KTM workshop can recommend the right carburetor tuning.

Clean the chain.

Chain cleaner (🕮 p. 131)	
--------------------------	--

- Mount the steel sprocket.
- Grease the chain.

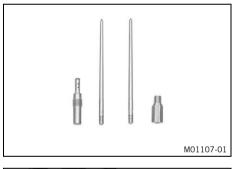

Universal oil spray (🕮 p. 132)

- Clean the radiator fins.
- Straighten bent radiator fins carefully.

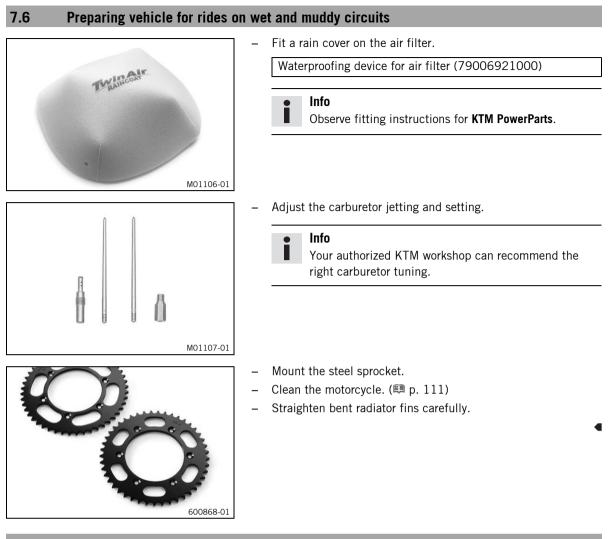

#### Condition

- Regular use in sand
- \_ Change the piston every 10 operating hours.

## 7.7 Preparing vehicle for high temperatures or slow riding

Check the radiator cap.

Value on the radiator cap	1.8 bar (26 psi)

» If the indicated value does not correspond to the setpoint value:

## Warning

**Danger of scalding** During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.
- Change the radiator cap.
- Adjust the secondary drive to the road conditions.

#### Info

- The engine oil heats up quickly when the clutch is operated frequently due to an excessively high secondary ratio.
- Clean the chain.

Chain cleaner (🕮 p. 131)

- Clean the radiator fins.
- Straighten bent radiator fins carefully.
- Check the coolant level. (🕮 p. 97)

- Fit a rain cover on the air filter.

Waterproofing device for air filter (79006921000)

### lnfo

- Observe fitting instructions for **KTM PowerParts**.
- Adjust the carburetor jetting and setting.

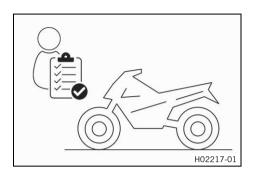

#### Info

Your authorized KTM workshop can recommend the right carburetor tuning.

#### 8.1 Checks and maintenance measures when preparing for use

## Info

Before every trip, check the condition of the vehicle and ensure that it is safe to operate. The vehicle must be in perfect technical condition when it is being operated.

- Check the front brake fluid level. (🕮 p. 78)
- Check the rear brake fluid level. (
  p. 84)
- Check the front brake linings. (E p. 80)
- Check the brake linings of the rear brake. (🕮 p. 86)
- Check that the brake system is functioning properly.

- Check the chain, rear sprocket, engine sprocket, and chain guide. (興 p. 69)
- Check the chain tension. (🕮 p. 67)

#### Info

The spoke tension must be checked regularly as incorrect spoke tension will strongly impair riding safety.

- Clean the dust boots of the fork legs. (
  p. 47)
- Bleed the fork legs. (B p. 46)
- Check the air filter.
- Check the settings of all controls and ensure that they can be operated smoothly.
- Check all screws, nuts, and hose clamps regularly for tightness.
- Check the fuel level.

#### 8.2 Starting

#### Danger

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death. – Always make sure there is sufficient ventilation when running the engine.

Use an effective exhaust extraction system when starting or running the engine in an enclosed space.

#### Note

**Engine damage** High revving speed with a cold engine negatively impacts the lifespan of the engine.

- Always run the engine warm at a low speed.

#### lnfo

If the motorcycle is unwilling to start, the cause can be old fuel in the float chamber. The flammable elements of the fuel evaporate after a long time of standing.

If the float chamber is filled with fresh fuel, the engine starts immediately.

#### The motorcycle has been out of use for more than 1 week

- Empty the carburetor float chamber. 🔌 (🕮 p. 107)
- Turn tap handle of the fuel tap to the **ON** position.
  - ✓ Fuel can flow from the fuel tank to the carburetor.
- Remove the plug-in stand.
- Shift the transmission to idle.

#### Condition

The engine is cold

- Pull the choke lever out as far as possible.
- Press the kick starter robustly through its full range.

Info Do not open the throttle.

#### 8.3 Starting off

### Info

The plug-in stand must be removed before riding. While riding, the side stand must be folded up and secured with the rubber band.

 Pull the clutch lever, shift into first gear, release the clutch lever slowly and at the same time open the throttle gently.

#### 8.4 Shifting, riding

### Warning

**Danger of accidents** If you change down at high engine speed, the rear wheel blocks and the engine races.

- Do not change into a low gear at high engine speed.

#### lnfo

If you hear unusual noises while riding, stop immediately, switch off the engine, and contact an authorized KTM workshop.

First gear is used for starting off and for steep inclines.

- Shift into a higher gear when conditions allow (incline, road situation, etc.). To do so, release the throttle
  while simultaneously pulling the clutch lever, shift into the next gear, release the clutch lever and open the
  throttle.
- If the choke function has been activated, deactivate it after the engine has warmed up.
- After reaching maximum speed by fully opening the throttle grip, turn the throttle back so it is <sup>3</sup>/<sub>4</sub> open. This will barely reduce the speed but fuel consumption will be considerably lower.
- Always open the throttle only as much as the engine can handle abrupt throttle opening increases fuel consumption.
- To shift down, apply the brakes and close the throttle at the same time.

- Pull the clutch lever and shift into a lower gear, release the clutch lever slowly, and either open the throttle or shift again.
- Switch off the engine if running at idle or stationary for a long time.
   Guideline

≥ 2 min

- Avoid frequent and longer slipping of the clutch. As a result the gear oil, engine and cooling system heat up.
- Ride at a low engine speed instead of at a high engine speed with a slipping clutch.

#### 8.5 Applying the brakes

Warning

- Danger of accidents Excessively forceful application of the brakes blocks the wheels.
- Adjust application of the brakes to the respective riding situation and riding surface conditions.

Warning

**Danger of accidents** A spongy pressure point on the front or rear brake reduces braking efficiency.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

## Warning

Danger of accidents Moisture and dirt impair the brake system.

- Brake carefully several times to dry out and remove dirt from the brake linings and the brake discs.
- On sandy, wet, or slippery surfaces, use the rear brake mostly if possible.
- Always finish braking before you go into a bend. Change down to a lower gear appropriate to your road speed.
- Use the braking effect of the engine on long downhill stretches. Change down one or two gears, but do not
  over-rev the engine. You will have to apply the brakes far less frequently as a result and the brake system will
  not overheat.

#### 8.6 Stopping, parking

## Warning

**Risk of misappropriation** People who act without authorization endanger themselves and others.

- Do not leave the vehicle unattended if the engine is running.
- Protect the vehicle against access by unauthorized persons.

#### Warning

Danger of burns Some vehicle components become very hot when the vehicle is operated.

- Do not touch any parts such as the exhaust system, radiator, engine, shock absorber, or brake system before the vehicle parts have cooled down.
- Let the vehicle parts cool down before you perform any work on the vehicle.

#### Note

Fire hazard Hot vehicle components pose a fire hazard and explosion risk.

- Do not park the vehicle near to materials which are highly flammable or explosive.
- Allow the vehicle to cool down before covering it.

#### Note

**Material damage** The vehicle may be damaged by incorrect procedure when parking. Significant damage may be caused if the vehicle rolls away or falls over. The components for parking the vehicle are designed only for the weight of the vehicle.

- Park the vehicle on a firm and level surface. \_
- Ensure that nobody sits on the vehicle when the vehicle is parked on a stand.
- Apply the brakes on the motorcycle. \_
- Shift gear to neutral. \_
- Press and hold the kill switch  $\otimes$  while the engine is idling until the engine stops.
- Turn tap handle of the fuel tap to the **OFF** position.
- Rest the vehicle on the plug-in stand.

#### 8.7 Transporting

#### Note

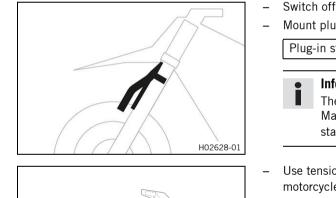

**Danger of damage** The parked vehicle can roll away or fall over.

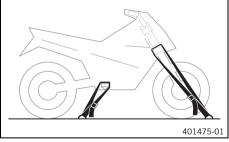

Park the vehicle on a firm and level surface. \_

#### Note

Fire hazard Hot vehicle components pose a fire hazard and explosion risk.

- Do not park the vehicle near to materials which are highly flammable or explosive.
- Allow the vehicle to cool down before covering it.

Switch off the engine.

Mount plug-in stand on the fork legs.

Plug-in stand (79029094000)

#### Info

The plug-in stand is included. Make sure the brake line runs in front of the plug-in stand and does not become wedged.

Use tension belts or other suitable devices to secure the motorcycle against falling over or rolling away.

#### Info

Only tighten the tension belts to the point that the plug-in stand is in contact with the fender and tires. Pay attention to the alignment of the plug-in stand to the fender.

#### 8.8 Refueling

## 1 Danger

**Fire hazard** Fuel is highly flammable.

- The fuel in the fuel tank expands when warm and can escape if overfilled.
- Do not refuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

#### Warning

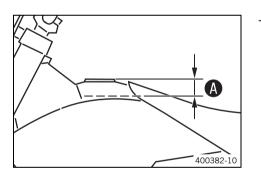

Danger of poisoning Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.

## Ag Note

Environmental hazard Improper handling of fuel is a danger to the environment.

- Do not allow fuel to enter the groundwater, the soil, or the sewage system.

-	Switch	off	the	engine.
---	--------	-----	-----	---------

- Open the filler cap. (🕮 p. 16)

Measurement of A	35 mm (1.38 in)			
Total fuel tank capacity, approx.	7.5 I (1.98	US gal)	Super unleaded (98 octane) mixed with 2-stroke engine oil (1:40) ( p. 130)	

Fill the fuel tank with fuel up to measurement **A**.

Engine oil, 2-stroke (🛤 p. 129)

– Close the filler cap. (🕮 p. 16)

## 9.1 Additional information

Any further work that results from the compulsory work or from the recommended work must be ordered separately and invoiced separately.

Different service intervals may apply in your country, depending on the local operating conditions. Individual service intervals and scopes may change in the course of technical developments. The most up-to-date service schedule can always be found on KTM Dealer.net. Your authorized KTM dealer will be happy to advise you.

#### 10.1 Checking the basic chassis setting with the rider's weight

#### • Info

When adjusting the basic chassis setting, first adjust the shock absorber and then the fork.

- For optimal motorcycle riding characteristics and to avoid damage to forks, shock absorbers, swingarm and frame, the basic settings of the suspension components must match the rider's weight.
- As delivered, KTM offroad motorcycles are adjusted for an average rider's weight (with full protective clothing).
   Guideline

Standard rider weight	75 85 kg (165
	187 lb.)

- If the rider's weight is above or below this range, the basic setting of the suspension components must be adjusted accordingly.
- Small weight differences can be compensated by adjusting the spring preload, but in the case of large weight differences, the springs must be replaced.

### 10.2 Air suspension AER 48

Air suspension **WP Suspension AER 48** is used in the fork. In this system, suspension is located in the left fork leg and damping in the right fork leg.

As fork springs are no longer required, a significant weight advantage is achieved when compared to conventional forks. The response on slightly uneven surfaces is significantly improved. In normal driving mode, suspension is provided exclusively by an air cushion. A steel spring is located in the left fork leg as an end stop.

#### Info

If the fork is frequently overloaded, then the air pressure in the fork must be increased to avoid damage to the fork and frame.

The air pressure in the fork can be quickly adjusted for the rider's weight, surface conditions and the rider's preference using a fork pump. The fork does not have to be dismantled. The time consuming mounting of harder or softer fork springs is not required. If the air chamber loses air due to a damaged seal, the fork will still not sag. In this case the air is retained in the fork. The suspension travel is maintained as far as possible. The damping becomes harder and the riding comfort reduces.

As with a conventional fork, the damping can be adjusted in rebound and compression stages.

The rebound adjuster is located at the lower end of the right fork leg.

The compression adjuster is located at the upper end of the right fork leg.

## 10.3 Compression damping of the shock absorber

The compression damping of the shock absorber is divided into two ranges: high-speed and low-speed. High-speed and low-speed refer to the compression speed of the rear wheel suspension and not to the vehicle speed.

The high-speed setting, for example, has an effect on the landing after a jump: the rear wheel suspension compresses quickly.

The low-speed setting, for example, has an effect when riding over long ground swells: the rear wheel suspension compresses slowly.

These two ranges can be adjusted separately, although the transition between high-speed and low-speed is gradual. Thus, changes in the high-speed range affect the compression damping in the low-speed range and vice versa.

10.4 Adjusting the low-speed compression damping of the shock absorber

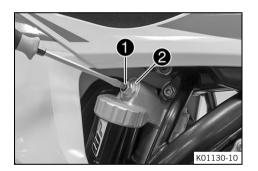

## Caution

**Risk of injury** Parts of the shock absorber will move around if the shock absorber is detached incorrectly. The shock absorber is filled with highly compressed nitrogen.

- Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

## Info

The effect of the low-speed setting can be seen in slow to normal compression of the shock absorber.

 Turn adjusting screw ① clockwise with a screwdriver as far as the last perceptible click.

## Info

Do not loosen fitting **2**!

 Turn counterclockwise by the number of clicks corresponding to the shock absorber type.

## Guideline

Compression damping, low-speed (125/150 SX EU)		
Comfort	17 clicks	
Standard	15 clicks	
Sport	13 clicks	
Compression damping, low-speed (125/150 SX US)		
Comfort 17 clicks		
Standard 15 clicks		
Sport	13 clicks	

## ● Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

## 10.5 Adjusting the high-speed compression damping of the shock absorber

## Caution

**Risk of injury** Parts of the shock absorber will move around if the shock absorber is detached incorrectly. The shock absorber is filled with highly compressed nitrogen.

- Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

## Info

The effect of the high-speed setting can be seen in fast compression of the shock absorber.

Turn adjusting screw **1** all the way clockwise with a socket wrench.

Turn counterclockwise by the number of turns corresponding to the shock absorber type.

Guideline

Compression damping, high-speed (125/150 SX EU)		
Comfort 2 turns		
Standard	1.5 turns	
Sport	1 turn	
Compression damping, high-speed (125/150 SX US)		
Comfort 2 turns		
Standard 1.5 turns		
Sport	1 turn	

Info

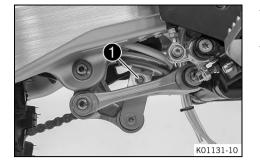

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

## 10.6 Adjusting the rebound damping of the shock absorber

## Caution

**Risk of injury** Parts of the shock absorber will move around if the shock absorber is detached incorrectly. The shock absorber is filled with highly compressed nitrogen.

- Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

- Turn adjusting screw ① clockwise up to the last perceptible click.
- Turn counterclockwise by the number of clicks corresponding to the shock absorber type.
   Guideline

Rebound damping (125/150 SX EU)		
Comfort	17 clicks	
Standard	15 clicks	
Sport	13 clicks	
Rebound damping (125/150 SX US)		
Comfort	17 clicks	
Standard 15 clicks		
Sport	13 clicks	

## Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

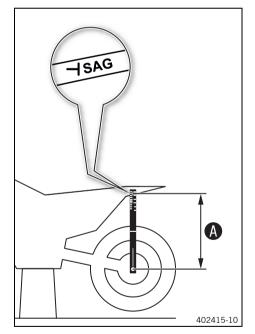

## 10.7 Measuring the rear wheel dimension unloaded

## Preparatory work

- Raise the motorcycle with a lift stand. (IP p. 46)

## Main work

\_

Position the sag gauge in the rear axle and measure the distance to marking **SAG** on the rear fender.

Sag gauge (00029090000)

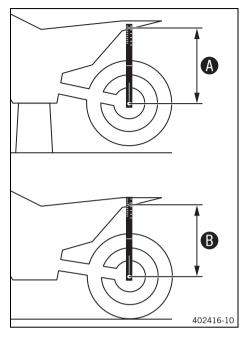

Pin for sag gauge (00029990010)

- Note down the value as dimension (A).

Finishing work

- Remove the motorcycle from the lift stand. (IP p. 46)

## 10.8 Checking the static sag of the shock absorber

- Measure dimension (A) of rear wheel unloaded. (
  () p. 37)
- Hold the motorcycle upright with the aid of an assistant.
- Again measure the distance between the rear axle and marking **SAG** on the rear fender using the sag gauge.
  - Note down the value as dimension **B**.

## Info

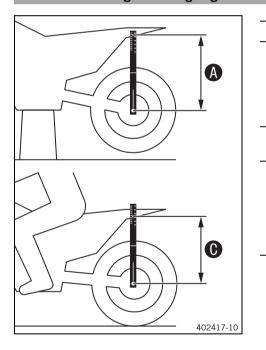

The static sag is the difference between measurements **A** and **B**.

-	Check	the	static	sag.
---	-------	-----	--------	------

[	Static sag (125/150 SX EU)	35 mm (1.38 in)
[	Static sag (125/150 SX US)	35 mm (1.38 in)

If the static sag is less or more than the specified value: - Adjust the spring preload of the shock absorber. (龥 p. 39)

## 10.9 Checking the riding sag of the shock absorber

- Measure dimension 🚯 of rear wheel unloaded. (🕮 p. 37)
- With another person holding the motorcycle, the rider, wearing full protective clothing, sits on the seat in a normal sitting position (feet on footrests) and bounces up and down a few times.
  - ✓ The rear wheel suspension levels out.
- Another person again measures the distance between the rear axle and marking **SAG** on the rear fender using the sag gauge.
- Note down the value as dimension **()**.

The riding sag is the difference between measurements (A) and (C).

Check the riding sag.

## Guideline

Ri	iding sag (125/150 SX EU)	105 mm (4.13 in)
Ri	iding sag (125/150 SX US)	105 mm (4.13 in)

» If the riding sag differs from the specified measurement:

– Adjust the riding sag. 🔌 (🕮 p. 40)

## 10.10 Adjusting the spring preload of the shock absorber $\checkmark$

## Caution

**Risk of injury** Parts of the shock absorber will move around if the shock absorber is detached incorrectly. The shock absorber is filled with highly compressed nitrogen.

- Please follow the description provided. (Your authorized KTM workshop will be glad to help.)

## Info

Before changing the spring preload, make a note of the present setting, e.g., by measuring the spring length.

# 

## Preparatory work

- Raise the motorcycle with a lift stand. (
  p. 46)
- Remove the shock absorber. 🔌 (🕮 p. 55)
- After removing the shock absorber, clean it thoroughly.

## Main work

- Loosen screw 🚺.
- Turn adjusting ring ② until the spring is no longer under tension.

Holding wrench (90129051000)

- Measure the overall spring length while the spring is not under tension.
- Tighten the spring by turning adjusting ring 2 to measurement A.

## Guideline

Spring preload (125/150 SX EU)	7 mm (0.28 in)
Spring preload (125/150 SX US)	6 mm (0.24 in)

# Info Depe

Depending on the static sag and/or the riding sag, it may be necessary to increase or decrease the spring preload.

## - Tighten screw 🚺.

## Guideline

Screw, shock	M5	5 Nm (3.7 lbf ft)
absorber adjusting		
ring		

## **Finishing work**

- Install the shock absorber. 🔧 (🕮 p. 56)
- Remove the motorcycle from the lift stand. (IP p. 46)

•

## 10.11 Adjusting the riding sag 🔧

## Preparatory work

- Raise the motorcycle with a lift stand. (I p. 46)
- Remove the shock absorber. 🔌 (🕮 p. 55)
  - After removing the shock absorber, clean it thoroughly.

## Main work

- Choose and mount a suitable spring.

Guideline

Spring rate (125/150 SX EU)	
Weight of rider: 65 75 kg (143 165 lb.)	36 N/mm (206 lb/in)
Weight of rider: 75 85 kg (165 187 lb.)	39 N/mm (223 Ib/in)
Weight of rider: 85 95 kg (187 209 lb.)	42 N/mm (240 lb/in)
Spring rate (125/150 SX US)	
Weight of rider: 65 75 kg (143 165 lb.)	36 N/mm (206 lb/in)
Weight of rider: 75 85 kg (165 187 lb.)	39 N/mm (223 lb/in)
Weight of rider: 85 95 kg (187 209 lb.)	42 N/mm (240 lb/in)

## Info

The spring rate is shown on the outside of the spring.

## **Finishing work**

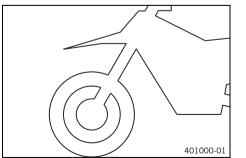

- Install the shock absorber. 🔌 (🕮 p. 56)
- Remove the motorcycle from the lift stand. (
  P. 46)
- Check the static sag of the shock absorber. (
  p. 38)
- Check the riding sag of the shock absorber. (🕮 p. 38)

## 10.12 Checking the basic setting of the fork

Info

For various reasons, no exact riding sag can be determined for the fork.

B00292-10

- Smaller differences in the rider's weight can be compensated for by the fork air pressure.
  - However, if the fork frequently bottoms out (hard end stop on compression), the fork air pressure must be increased, within the specified values, to avoid damage to the fork and frame.
- If the fork feels unusually hard after extended periods of operation, the fork legs need to be bled.

## 10.13 Adjusting the fork air pressure

## Warning

**Danger of accident** Modifications to the suspension setting may seriously alter the handling characteristic.

Extreme modifications to the suspension setting may cause a serious deterioration in the handling characteristic and overload components.

- Only make adjustments within the recommended range.
- Ride slowly to start with after making adjustments to get the feel of the new handling characteristic.

## Info

Check or adjust the air pressure under the same conditions at the earliest 5 minutes after switching off the engine.

The air suspension is located in the left fork leg. The pressure and rebound damping is located in the right fork leg.

# 

Preparatory work

- Raise the motorcycle with a lift stand. (🕮 p. 46)

## Main work

- Remove protection cap **1**.
  - Push fork pump **2** together fully.

Fork airpump (79412966000)

## Info

\_

The fork pump is included as part of the motorcycle's separate enclosure.

- Connect the fork pump to the left fork leg.
  - ✓ The fork pump indicator switches on automatically.
  - $\checkmark$  A little air escapes from the fork leg when connecting.

## Info

This is due to the volume of the hose and not due to a defect in the fork pump or the fork. Read the accompanying **KTM PowerParts** instructions.

- Adjust the air pressure as specified.

## Guideline

Air pressure (125/150 SX EU)	8.3 bar (120 psi)
Air pressure (125/150 SX US)	8.4 bar (122 psi)
Changing of the air pressure in steps of	0.2 bar (3 psi)
Minimum air pressure	7 bar (102 psi)
Maximum air pressure	12 bar (174 psi)

## Info

Never adjust the air pressure to a value outside the stated range.

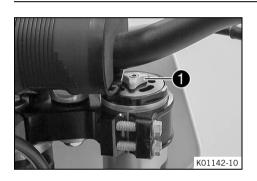

- Disconnect the fork pump from the left fork leg.
  - ✓ When disconnecting, excess pressure will escape from the hose the fork leg itself does not lose any air.
  - The fork pump indicator switches off automatically after 80 seconds.
  - Mount protection cap.

## **Finishing work**

- Remove the motorcycle from the lift stand. (I p. 46)

## 10.14 Adjusting the compression damping of the fork

- Info
  - The hydraulic compression damping determines the fork suspension behavior.

- Turn adjusting screw 1 clockwise all the way.
  - Adjusting screw **1** is located at the upper end of the right fork leg.
- Turn counterclockwise by the number of clicks corresponding to the fork type.

## Guideline

Compression damping (125/150 SX EU)		
Comfort	17 clicks	
Standard	12 clicks	
Sport	7 clicks	
Compression damping (125/150 SX US)		
Comfort 17 clicks		
Standard 12 clicks		
Sport	7 clicks	

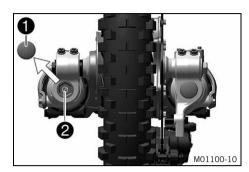

## Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

## 10.15 Adjusting the rebound damping of the fork

# • Info

The hydraulic rebound damping determines the fork suspension behavior.

Remove protection cap ①.
Turn adjusting screw ② clockwise all the way.

# • Info

Adjusting screw **2** is located at the lower end of the right fork leg.

 Turn counterclockwise by the number of clicks corresponding to the fork type.

Guideline

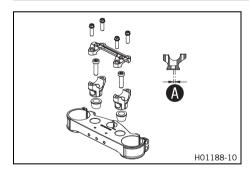

Rebound damping (125/150 SX EU)		
Comfort	17 clicks	
Standard	12 clicks	
Sport	7 clicks	
Rebound damping (125/150 SX US)		
Comfort	17 clicks	
Standard 12 clicks		
Sport	7 clicks	

## Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

- Mount protection cap **1**.

## 10.16 Handlebar position

The holes on the handlebar supports are placed at a distance of  $\bigstar$  from the center.

Hole distance A	3.5 mm (0.138 in)

The handlebar can be mounted in 2 different positions. In this way, the handlebar can be mounted in the most comfortable position for the rider.

## 10.17 Adjusting the handlebar position 🔌

## Warning

Danger of accidents A repaired handlebar poses a safety risk.

If the handlebar is bent or straightened, the material becomes fatigued. The handlebar may break as a result.

- Change the handlebar if the handlebar is damaged or bent.

## Preparatory work

- Remove the handlebar cushion.

## Main work

 Remove screws ①. Remove the handlebar clamp. Remove the handlebar and lay it to one side.

## Info

- Cover the components to protect them against damage. Do not kink the cables and lines.
- Remove screws 2. Take off handlebar supports 3.
- Position rubber bushings ④ and push through nuts ⑤ from below.
- Place the handlebar supports in the required position.

## • Info

The handlebar supports are longer and higher on one side. Position the left and right handlebar supports evenly.

Mount and tighten screws **2**.

Guideline

Screw, handle- bar support	M10	40 Nm (29.5 lbf ft) <b>Loctite®243™</b>
-------------------------------	-----	--

Position the handlebar.

## Info

Make sure the cables and wiring are positioned correctly.

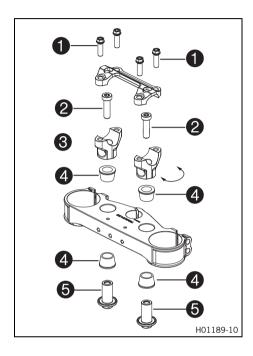

- Position the handlebar clamp.
- Mount screws 1 but do not tighten yet.
- First bolt the handlebar clamp with screws ① onto the longer, higher side of the handlebar supports so that both parts touch. Guideline

Screw, handlebar	M8	20 Nm (14.8 lbf ft)
clamp		

Tighten screws 1 evenly.

Guideline

Screw, handlebar	M8	20 Nm (14.8 lbf ft)
clamp		

Finishing work

Mount the handlebar cushion.

◀

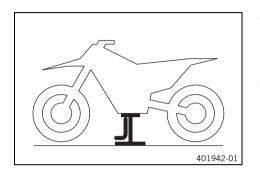

## 11.1 Raising the motorcycle with a lift stand

## Note

Material damage The vehicle may be damaged by incorrect procedure when parking.

Significant damage may be caused if the vehicle rolls away or falls over. The components for parking the vehicle are designed only for the weight of the vehicle.

- Park the vehicle on a firm and level surface.
- Ensure that nobody sits on the vehicle when the vehicle is parked on a stand.

- Raise the motorcycle at the frame underneath the engine.

Lift stand (78129955100)

- ✓ Neither wheel is in contact with the ground.
- Secure the motorcycle against falling over.

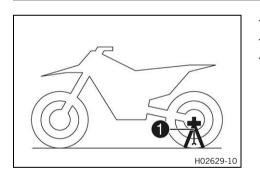

## 11.2 Removing the motorcycle from the lift stand

## Note

Material damage The vehicle may be damaged by incorrect procedure when parking.

Significant damage may be caused if the vehicle rolls away or falls over. The components for parking the vehicle are designed only for the weight of the vehicle.

- Park the vehicle on a firm and level surface.
- Ensure that nobody sits on the vehicle when the vehicle is parked on a stand.

- Remove the motorcycle from the lift stand.
- Remove the lift stand.
- To park the motorcycle, insert plug-in stand 1 into the left side of the wheel spindle.

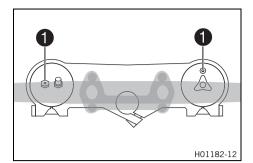

## • Info

Remove the plug-in stand before riding.

## 11.3 Bleeding the fork legs

## Preparatory work

Raise the motorcycle with a lift stand. (🕮 p. 46)

## Main work

\_

- Release bleeder screws 1.
  - ✓ Any excess pressure escapes from the interior of the fork. Tighten the bleeder screws.

### **Finishing work**

- Remove the motorcycle from the lift stand. (IP p. 46)

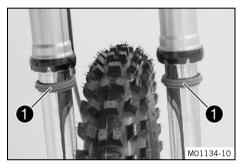

## 11.4 Cleaning the dust boots of the fork legs

## Preparatory work

- Raise the motorcycle with a lift stand. (B) p. 46)
- Remove the fork protector. (🕮 p. 49)

\_

Push dust boots 1 of both fork legs downward.

## Info

The dust boots remove dust and coarse dirt particles from the inside fork tubes. Over time, dirt can accumulate behind the dust boots. If this dirt is not removed, the oil seals behind can start to leak.

## Warning

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.
- Clean and oil the dust boots and inner fork tubes of both fork legs.

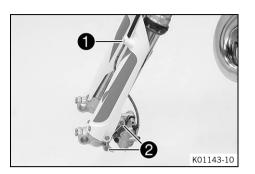

Universal oil spray (🕮 p. 132)

- Press the dust boots back into their normal position.
- Remove excess oil.

## **Finishing work**

- Install the fork protector. (
  p. 49)
- Remove the motorcycle from the lift stand. (E) p. 46)

## 11.5 Removing the fork legs 🔦

- Raise the motorcycle with a lift stand. (
  P. 46)
- Remove the front wheel. 🔧 (🕮 p. 89)

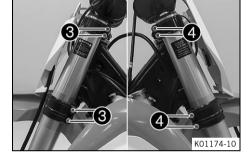

## Main work

- Remove screws 1 and take off the clamp.
- Remove screws 🛿 and take off the brake caliper.
- Allow the brake caliper and brake line to hang tension-free to the side.

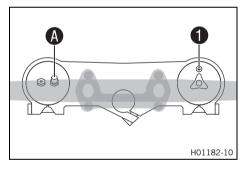

## • Info

Do not activate the hand brake lever while the front wheel is removed.

- Unscrew screws **3**. Take out the left fork leg.
- Unscrew screws 4. Take out the right fork leg.

11.6 Installing the fork legs 🔌

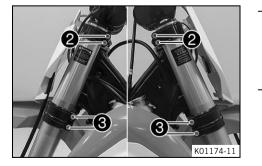

## Main work

Position the fork legs.

- ✓ Air release screw ① of the right fork leg is positioned to the front.
- Valve A of the left fork leg faces the front.

## lnfo

Grooves are milled into the side of the upper end of the fork legs. The second milled groove (from the top) must be flush with the top edge of the upper triple clamp. The air suspension is located in the left fork leg. The pressure and rebound damping is located in the right fork leg.

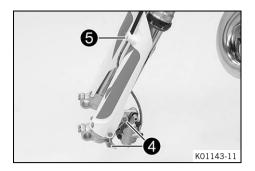

## Tighten screws **2**.

Guideline

Screw, top triple clamp	M8	17 Nm (12.5 lbf ft)
----------------------------	----	---------------------

## Tighten screws 🕄.

Guideline		
Screw, bottom triple clamp	M8	12 Nm (8.9 lbf ft)
clamp		

Position the brake caliper. Mount and tighten screws 4.
 Guideline

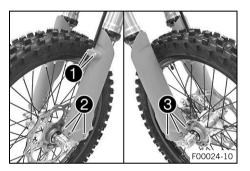

Screw, front brake caliper	M8	25 Nm (18.4 lbf ft) <b>Loctite®243™</b>

Position the brake line and clamp. Mount and tighten screws ⑤.

## Finishing work

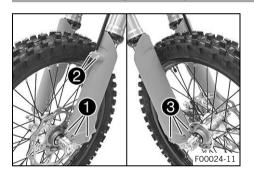

Install the front wheel. ◄ (≅ p. 90)

## 11.7 Removing the fork protector

Remove screws ①. Remove the clamp.
Remove screws ②. Take off the left fork protector.
Remove screws ③. Take off the right fork protector.

11.8 Installing the fork protector

Position the fork protection on the left fork leg. Mount and tighten screws 1.

Guideline

\_

Remaining screws,	M6	10 Nm (7.4 lbf ft)
chassis		

- Position the brake line and clamp. Mount and tighten screws **2**.
- Position the fork protector on the right fork leg. Mount and tighten screws 3.

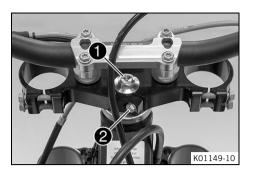

Guideline

Remaining screws,	M6	10 Nm (7.4 lbf ft)
chassis		

## 11.9 Removing the lower triple clamp 🔧

## **Preparatory work**

- Raise the motorcycle with a lift stand. (
  p. 46)
- Remove the front wheel. 🔌 (🕮 p. 89)
- Remove the fork legs. 🔧 (🕮 p. 48)
- Remove the start number plate. (
  p. 54)
- Remove front fender. (🕮 p. 54)
- Remove the handlebar cushion.

## Main work

## Remove screw 1.

- Remove screw **2**.
- Pull off the upper triple clamp with the handlebar and hang to the side.

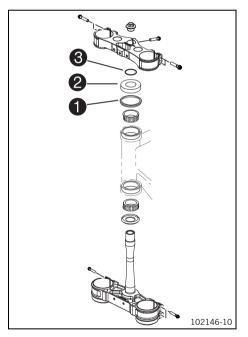

Protect the components against damage by covering them. Do not kink the cables and lines.

- Remove O-ring 3. Remove protective ring 4.
- Take off the lower triple clamp with the steering stem.
- Remove the upper steering head bearing.

## 11.10 Installing the lower triple clamp 🔦

## Main work

 Clean the bearing and sealing elements, check for damage, and grease.

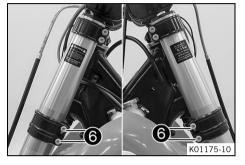

High viscosity grease (🕮 p. 131)

- Insert the lower triple clamp with the steering stem. Mount the upper steering head bearing.
- Check whether upper steering head seal 
   is correctly positioned.
- Slide on protective ring **2** and O-ring **3**.

- Position the upper triple clamp with the handlebar.
- Mount screw 4 but do not tighten yet.

- Position the fork legs. \_
  - ✓ Air release screw **⑤** of the right fork leg is positioned to the front.

✓ Valve ▲ of the left fork leg faces the front.

## Info

Í

The air suspension **AER** valve is located in the left fork leg.

Grooves are milled into the side of the upper end of the fork legs. The second milled groove (from the top) must be flush with the top edge of the upper triple clamp.

## Tighten screws 6.

## **Finishing work**

- Check that the wiring harness, throttle cables, and brake and clutch lines can move freely and are routed correctly.
- Install front fender. (🕮 p. 54)
- Install the front wheel. 🔌 (🕮 p. 90)
- Check the play of the steering head bearing. (
  p. 52)
- Remove the motorcycle from the lift stand. (
  P. 46)
- Install the start number plate. (🕮 p. 54)
- Mount the handlebar cushion.

## 11.11 Checking the play of the steering head bearing

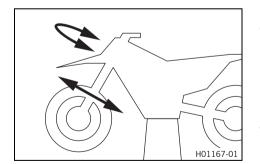

## Warning

**Danger of accidents** Incorrect steering head bearing play impairs the handling characteristic and damages components.

 Correct incorrect steering head bearing play immediately. (Your authorized KTM workshop will be glad to help.)

## lnfo

If the vehicle is operated for a lengthy period with play in the steering head bearing, the bearings and the bearing seats in the frame can become damaged over time.

## Preparatory work

- Raise the motorcycle with a lift stand. (🕮 p. 46)

## Main work

 Move the handlebar to the straight-ahead position. Move the fork legs to and fro in the direction of travel.

Play should not be detectable on the steering head bearing.

- If there is detectable play:
- Move the handlebar to and fro over the entire steering range.

It must be possible to move the handlebar easily over the entire steering range. There should be no detectable detent positions.

- » If detent positions are detected:
  - Adjust the steering head bearing play. ◀ ( p. 53)
  - Check the steering head bearing and change if necessary.

## **Finishing work**

Remove the motorcycle from the lift stand. (
\$\$ p. 46) \_

#### 11.12 Adjusting the steering head bearing play 🔧

Mount and tighten screw  $oldsymbol{8}$ .

Guideline

Screw, frame protec-	M5	3 Nm (2.2 lbf ft)
tor		

- Mount the new cable ties.

## **Finishing work**

\_

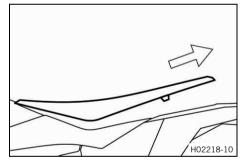

- Remove the motorcycle from the lift stand. (IP p. 46)

## 11.20 Removing the seat

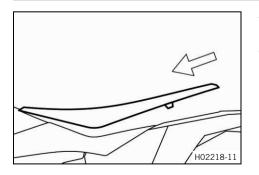

Remove screw 🚺.

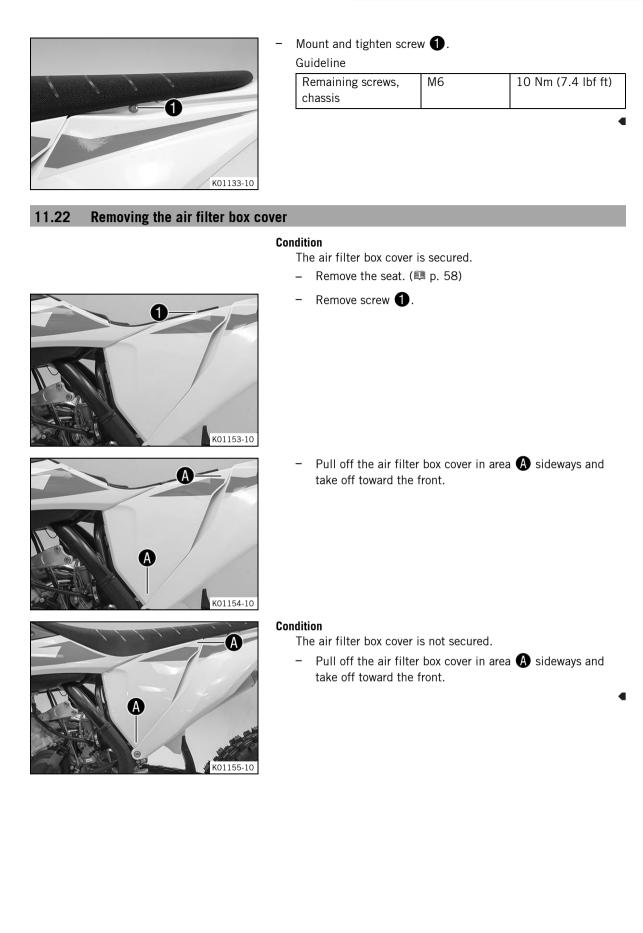

Raise the rear of the seat, pull the seat back, and lift it off.

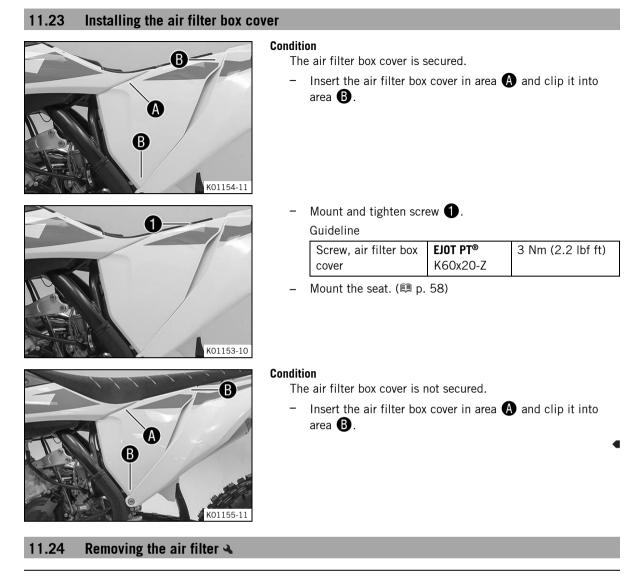

11.21 Mounting the seat

Mount the front of the seat on the collar bushing of the fuel tank, lower the seat at the rear, and push the seat forward.
Make sure that the seat is locked in correctly.

## Note

**Engine damage** Unfiltered intake air has a negative effect on the service life of the engine. Dust and dirt will enter the engine without an air filter.

<sup>-</sup> Never start to use the vehicle without an air filter.

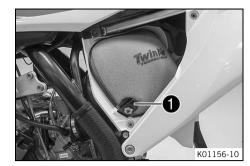

## § Note

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

## Preparatory work

- Remove the air filter box cover. (🕮 p. 59)

## Main work

- Detach retaining tab ①. Remove air filter with air filter support.
- Take off air filter from air filter support.

## 11.25 Cleaning the air filter and air filter box 🔦

## Note

- Environmental hazard Hazardous substances cause environmental damage.
- Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

## Info

Do not clean the air filter with fuel or petroleum since these substances attack the foam.

## **Preparatory work**

- Remove the air filter. 🔧 (🕮 p. 60)

## Main work

\_

\_

Wash the air filter thoroughly in special cleaning liquid and allow it to dry properly.

Air filter cleaner (🕮 p. 131)

## • Info Only

Only squeeze the air filter to dry it; never wring it out.

Oil the dry air filter with a high quality filter oil.

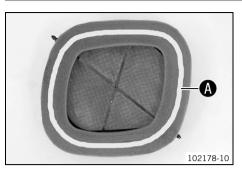

Oil for foam air filter (
p. 131)

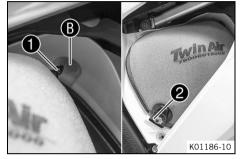

- Clean the air filter box.
- Clean the intake flange and check it for damage and tightness.

## **Finishing work**

- Install the air filter. 🔌 (🕮 p. 62)
- Install the air filter box cover. (I p. 60)

## 11.26 Installing the air filter 🔌

## Main work

- Mount the clean air filter on the air filter support.
- Grease the air filter in area 🚯.
  - Long-life grease (🕮 p. 131)
- Insert the air filter and position the top retaining pin (1) in bushing (3).

✓ The air filter is correctly positioned.

Secure the bottom retaining pin with holding tab  $\mathbf{2}$ .

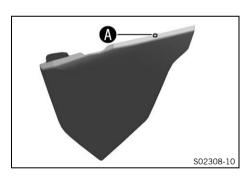

## Info

If the air filter is not mounted correctly, dust and dirt may enter the engine and result in damage.

## **Finishing work**

- Install the air filter box cover. (🕮 p. 60)

## 11.27 Preparing air filter box cover for securing A

## Preparatory work

Remove the air filter box cover. (🕮 p. 59)

## Main work

- Drill a hole at marking **A**. Guideline
- Diameter

6 mm (0.24 in)

## **Finishing work**

- Install the air filter box cover. (🕮 p. 60)

## 11.28 Removing the main silencer

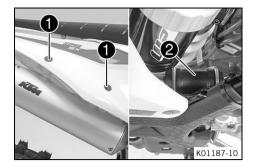

## Warning

Danger of burns The exhaust system gets very hot when the vehicle is driven.

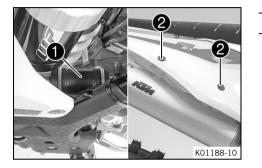

- Allow the exhaust system to cool down before performing any work on the vehicle.

Remove screws **1** with the washers.

Pull off the main silencer from the manifold at rubber sleeve **2**.

#### 11.29 Installing the main silencer

-	Position	the	main	sil	encer	with	rubber	sleeve	U.	
						-				

	Demoining concurs	MC	10 Nm (7 /
	Guideline		
-	Mount and tighten scre	ws 😢 with the v	vashers.

Remaining screws, M6 10 Nm ( chassis	7.4 lbf ft)
---	-------------

#### 11.30 Changing the glass fiber yarn filling in the main silencer 🔌

Danger of burns The exhaust system gets very hot when the vehicle is driven.

- Allow the exhaust system to cool down before performing any work on the vehicle.

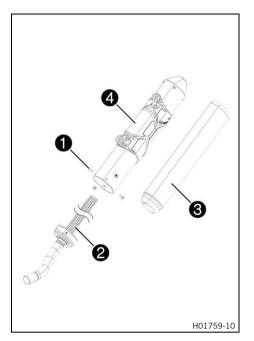

## Info

Warning

Over time, the fibers of the glass fiber yarn escape and the damper "burns" out. Not only is the noise level higher, the performance characteristic changes.

## Preparatory work

- Remove the main silencer. (
p. 62)

## Main work

- Remove screws 1. Pull out inner tube 2.
- Remove the glass fiber yarn filling 🕄 from the inner tube.
- Clean the parts that need to be reinstalled and check for damage.
- Fit the new glass fiber yarn filling **3** into the inner tube.
- Slide outer tube 4 over the inner tube with the new glass fiber yarn filling.
- Mount and tighten all screws 1.

Guideline

Screws on the main	M5	7 Nm (5.2 lbf ft)
silencer		

## Finishing work

- Install the main silencer. (I p. 63)

## 11.31 Removing the fuel tank 🔌

## Danger

**Fire hazard** Fuel is highly flammable.

The fuel in the fuel tank expands when warm and can escape if overfilled.

- Do not refuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

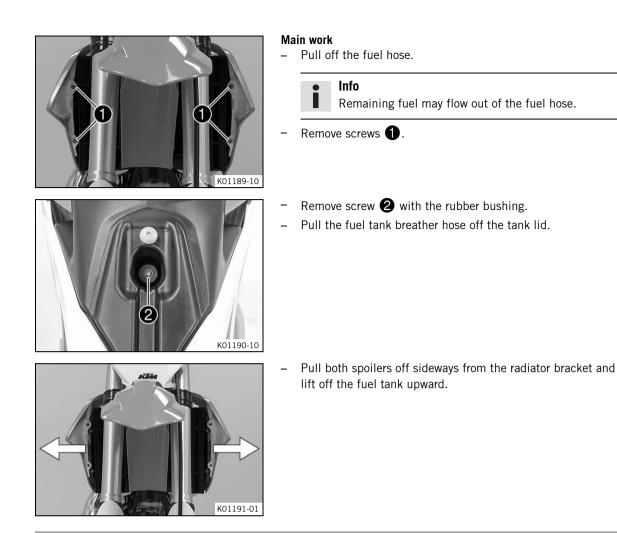

## Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.
- Keep fuels correctly in a suitable canister, and out of the reach of children.

## Preparatory work

- Remove the seat. (🕮 p. 58)
- Turn tap handle of the fuel tap to the **OFF** position.

## 11.32 Installing the fuel tank 🔦

## Danger

**Fire hazard** Fuel is highly flammable.

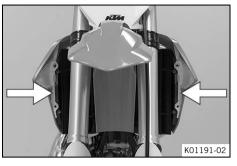

The fuel in the fuel tank expands when warm and can escape if overfilled.

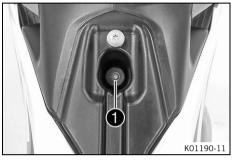

- Do not refuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

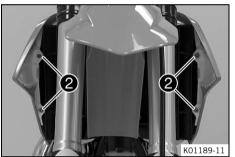

## Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.

## Main work

- Check the throttle cable routing. (
  p. 72)
- Position the fuel tank and fit the two spoilers to the sides of the radiator bracket.
- Make sure that no cables or throttle cables are trapped or damaged.
  - Attach the fuel tank breather hose.
- Mount and tighten screw 1 with the rubber bushing.
   Guideline

Γ	Remaining screws,	M6	10 Nm (7.4 lbf ft)
	chassis		

- Mount and tighten screws 2.
- Guideline

\_

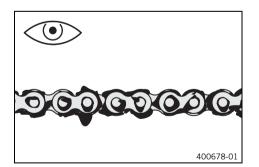

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
------------------------------	----	--------------------

Connect the fuel hose.

## **Finishing work**

– Mount the seat. (🕮 p. 58)

## 11.33 Checking the chain for dirt

- Check the chain for heavy soiling.
  - » If the chain is very dirty:
    - Clean the chain. (🕮 p. 67)

## 11.34 Cleaning the chain

## Warning

Danger of accidents Oil or grease on the tires reduces the road grip.

- Remove the lubricant from the tires using a suitable cleaning agent.

## Warning

- **Danger of accidents** Oil or grease on the brake discs reduces the braking effect.
- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

# Note

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

## Info

The service life of the chain depends largely on its maintenance.

400725-01

- Raise the motorcycle with a lift stand. (
p. 46)

## Main work

- Rinse off loose dirt with a soft jet of water.
- Remove old grease residue with chain cleaner.

Chain cleaner (🕮 p. 131)

After drying, apply chain spray.

Off-road chain spray (🕮 p. 131)

## **Finishing work**

## 11.35 Checking the chain tension

## Warning

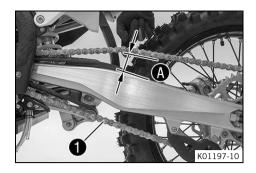

Danger of accidents Incorrect chain tension damages components and results in accidents.

If the chain is tensioned too much, the chain, engine sprocket, rear sprocket, transmission and rear wheel bearings wear more quickly. Some components may break if overloaded.

If the chain is too loose, the chain may fall off the engine sprocket or the rear sprocket. As a result, the rear wheel locks or the engine will be damaged.

- Check the chain tension regularly.
- Set the chain tension in accordance with the specification.

## Preparatory work

## Main work

- Pull the chain at the end of the chain sliding piece upward to measure chain tension **A**.

Guideline

The lower chain section	1 must be taut.
-------------------------	-----------------

## • Info

Chain wear is not always even, so you should repeat this measurement at different chain positions.

Chain tension	55 58 mm (2.17
	2.28 in)

 $\,\,{}^{\,\,}$  If the chain tension does not meet the specification:

– Adjust the chain tension. (🕮 p. 68)

## **Finishing work**

- Remove the motorcycle from the lift stand. (I p. 46)

## 11.36 Adjusting the chain tension

## Warning

Danger of accidents Incorrect chain tension damages components and results in accidents.

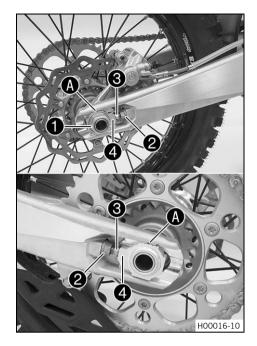

If the chain is tensioned too much, the chain, engine sprocket, rear sprocket, transmission and rear wheel bearings wear more quickly. Some components may break if overloaded.

If the chain is too loose, the chain may fall off the engine sprocket or the rear sprocket. As a result, the rear wheel locks or the engine will be damaged.

- Check the chain tension regularly.
- Set the chain tension in accordance with the specification.

## **Preparatory work**

- Raise the motorcycle with a lift stand. (
  P. 46)
- Check the chain tension. (🕮 p. 67)

 $\bigcirc$ 

## Main work

- Loosen nut 🚺.
- Loosen nuts 2.
- Adjust the chain tension by turning adjusting screws 3 to the left and right.

Guideline

 Chain tension
 55 ... 58 mm (2.17 ...

 2.28 in)
 2.28 in)

 Turn adjusting screws ③ on the left and right so that the markings on the left and right chain adjusters are in the same position relative to reference marks ④. The rear wheel is now correctly aligned.

- Tighten nuts **2**.
- Make sure that chain adjusters are fitted correctly on adjusting screws 3.
- Tighten nut 🚺.

## Guideline

Nut, rear wheel spin-	M25x1.5	80 Nm (59 lbf ft)
dle		

## Info

The wide adjustment range of the chain adjusters (32 mm) enables different secondary ratios with the same chain length. Chain adjusters **4** can be turned by 180°.

## **Finishing work**

- Remove the motorcycle from the lift stand. (I p. 46)

## 11.37 Checking the chain, rear sprocket, engine sprocket, and chain guide

400227-01

## **Preparatory work**

- Raise the motorcycle with a lift stand. (
p. 46)

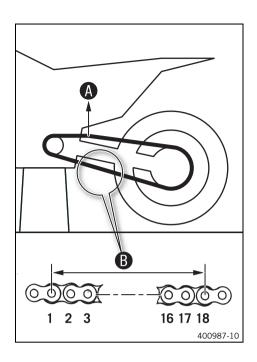

## Main work

- Shift the transmission to idle.
- Check the chain, rear sprocket and engine sprocket for wear.
  - » If the chain, rear sprocket or engine sprocket is worn:
    - Change the drivetrain kit. 🔌

## Info

The engine sprocket, rear sprocket and chain should always be replaced together.

Pull at the top part of the chain with the specified weight  $\mathbf{A}$ . Guideline

Weight, chain wear measure-	10 15 kg (22 33 lb.)
ment	

Measure distance **B** of 18 chain rollers in the lower chain section.

## Info

Chain wear is not always even, so you should repeat this measurement at different chain positions.

Maximum distance <b>B</b> from	272 mm (10.71 in)
18 chain rollers at the	
longest chain section	

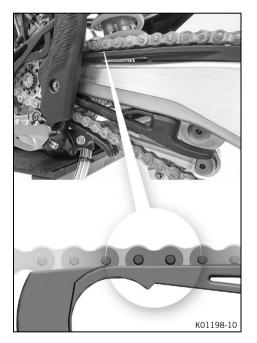

- If distance **B** is greater than the specified measurement: \_
  - Change the drivetrain kit. 🔧

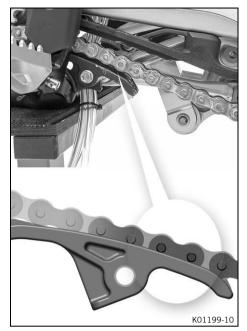

Info • 

When a new chain is mounted, the rear sprocket and engine sprocket should also be changed. New chains wear out faster on old, worn sprockets.

- Check the chain sliding guard for wear.
  - If the lower edge of the chain pins is in line with, or below, » the chain sliding guard:
    - Change the chain sliding guard. 🔧 \_
- Check that the chain sliding guard is firmly seated.
  - If the chain sliding guard is loose: »
    - Tighten the screws on the chain sliding guard. Guideline

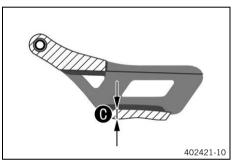

Screw, chain	M6	6 Nm (4.4 lbf ft)
sliding guard		Loctite <sup>®</sup> 243™

- Check the chain sliding piece for wear.
  - » If the lower edge of the chain pins is in line with or below the chain sliding piece:
    - Change the chain sliding piece. 🔌
- Check that the chain sliding piece is firmly seated.
  - » If the chain sliding piece is loose:
    - Tighten the screw on the chain sliding piece.

(	Guideline		
	Screw, chain slid-	M8	15 Nm
	ing piece		(11.1 lbf ft)

- Check the chain guide with a slide gauge for dimension **()**.

	8 8
Minimum thickness 🕑 of	6 mm (0.24 in)
the chain guide	

» If the measured value is less than the specification:
 – Change the chain guide. ◄

- Check that the chain guide is firmly seated.
  - » If the chain guide is loose:

Guideline

Tighten the screws on the chain guide.

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
Remaining nuts, chassis	M6	10 Nm (7.4 lbf ft)

# **Finishing work**

- Remove the motorcycle from the lift stand. (IP p. 46)

# **11 SERVICE WORK ON THE CHASSIS**

# 11.38 Checking the frame 🔧

- Check the frame for cracks and deformation.
- » If the frame exhibits cracks or deformation due to a mechanical impact:
  - Change the frame. 🔧

### 

Always replace a frame that has been damaged due to a mechanical impact. Repair of the frame is not authorized by KTM.

# 11.39 Checking the swingarm 🔌

- Check the swingarm for damage, cracking, and deformation.
  - » If the swingarm shows signs of damage, cracking, or deformation:
    - Change the swingarm. 🔦

Always change a damaged swingarm. Repair of the swingarm is not authorized by KTM.

# 40 Checking the threttle cohic routing

# 11.40 Checking the throttle cable routing

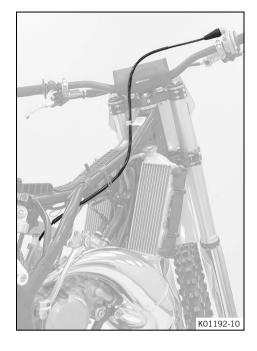

# Warning

**Danger of accidents** The throttle cable may slip out of the guide if routed incorrectly. The throttle slide will then no longer be closed and the speed can no longer be controlled.

 Make sure that the throttle cable routing and the play in throttle cable complies with the specification.

# **Preparatory work**

- Remove the seat. (🕮 p. 58)
- Turn tap handle of the fuel tap to the **OFF** position.
- Remove the fuel tank. 🔌 (🕮 p. 64)

## Main work

- Check the throttle cable routing.

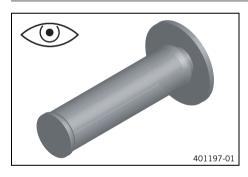

The throttle cable must be routed along the back of the handlebar, to the right of the frame, above the fuel tank bracket, and to the carburetor. The throttle cable must be fixed on the fuel tank bracket with a rubber band.

- If the throttle cable is not routed as specified:
- Correct the throttle cable routing.

# **Finishing work**

- Install the fuel tank. 🔌 (🕮 p. 65)
- Mount the seat. (🕮 p. 58)

# 11.41 Checking the rubber grip

 Check the rubber grips on the handlebar for damage, wear, and looseness.

# Info

The rubber grips are vulcanized onto a sleeve on the left and onto the handle tube of the throttle grip on the right. The left sleeve is clamped onto the handlebar. The rubber grip can only be replaced with the sleeve or the throttle tube.

- » If a rubber grip is damaged or worn:
  - Change the rubber grip.

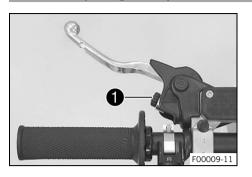

Check that screw ① is firmly seated. Guideline

# auidenne

Screw, fixed grip	M4	5 Nm (3.7 lbf ft) <b>Loctite<sup>®</sup>243™</b>
Diamond <b>A</b> mus	t be located at th	ne top.

# 11.42 Adjusting basic position of clutch lever

Adjust the basic setting of the clutch lever to your hand size by turning adjusting screw **1**.

# lnfo

Turn the adjusting screw counterclockwise to decrease the distance between the clutch lever and the handlebar. Turn the adjusting screw clockwise to increase the distance between the clutch lever and the handlebar. The range of adjustment is limited. Turn the adjusting screw by hand only, and do not apply any force.

Do not make any adjustments while riding.

# 11.43 Checking/correcting the fluid level of the hydraulic clutch

# Warning

Skin irritation Brake fluid causes skin irritation.

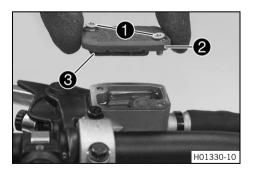

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

# lnfo

The fluid level rises with increasing wear of the clutch facing discs.

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and clutch lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint. Only use clean brake fluid from a sealed container.

- Move the clutch fluid reservoir mounted on the handlebar to a horizontal position.
  - Remove screws 1
  - Remove cover **2** with membrane **3**.

Check the fluid level.

Flu	id level below container	4 mm (0.16 in)	
rim	l		

- » If the fluid level does not meet specifications:
  - Correct the fluid level of the hydraulic clutch.

Brake fluid DOT 4 / DOT 5.1 (
p. 129)

Position the cover with the membrane. Mount and tighten the screws.

# Info

Clean up overflowed or spilled brake fluid immediately with water.

# 11.44 Changing the hydraulic clutch fluid 🔧

# Warning

Skin irritation Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

# Note

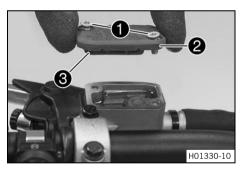

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

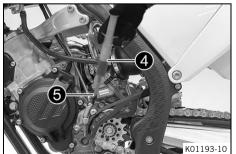

# Info

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and clutch lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint. Only use clean brake fluid from a sealed container.

- Move the clutch fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws 1.
- Remove cover **2** with membrane **3**.

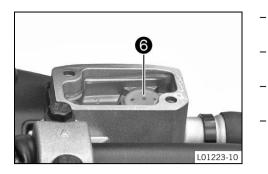

- Fill bleeding syringe **4** with the appropriate hydraulic fluid.

Syringe (50329050000)
Brake fluid DOT 4 / DOT 5.1 (🕮 p. 129)

On the clutch slave cylinder, remove bleeder screw (5) and mount bleeding syringe (4).

# **11 SERVICE WORK ON THE CHASSIS**

- Now inject the liquid into the system until it emerges from the drill hole (a) of the master cylinder without bubbles.
- Now and then, extract fluid from the master cylinder reservoir to prevent overflow.
- Remove the bleeding syringe. Mount and tighten screws bleeder screw.
- Correct the fluid level of the hydraulic clutch.

# Guideline

Fluid level bel	ow container	4 mm (0.16 in)	
rim			

Position the cover with the membrane. Mount and tighten the screws.

# Info

Clean up overflowed or spilled brake fluid immediately with water.

# 12.1 Checking the free travel of the hand brake lever

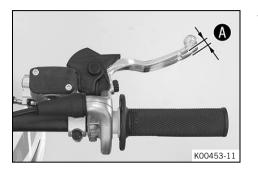

# Warning

**Danger of accidents** The brake system fails in the event of overheating.

- If there is no free travel on the hand brake lever, pressure builds up on the front brake circuit.
- Set the free travel on the hand brake lever in accordance with the specification.

\_

- Push the hand brake lever forward and check free travel ▲.

   Free travel of hand brake lever

   ≥ 3 mm (≥ 0.12 in)

   >

   If the free travel does not match the specification:
  - Adjust the basic position of the hand brake lever.
     (
     p. 77)

# 12.2 Adjusting the basic position of the hand brake lever

- Check the free travel of the hand brake lever. (🕮 p. 77)
- Adjust the basic position of the hand brake lever to your hand size by turning adjusting screw ①.

# • Info

Turn the adjusting screw clockwise to increase the distance between the hand brake lever and the handlebar.

Turn the adjusting screw counterclockwise to decrease the distance between the hand brake lever and the handlebar.

The range of adjustment is limited.

Only turn the adjusting screw by hand, and do not use force.

Do not make any adjustments while riding.

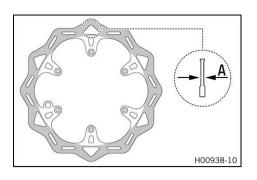

# 12.3 Checking the brake discs

# Warning

Danger of accidents Worn-out brake discs reduce the braking effect.

 Make sure that worn-out brake discs are replaced immediately. (Your authorized KTM workshop will be glad to help.)

Check the front and rear brake disc thickness at multiple points for the dimension  $(\mathbf{A})$ .

# • Info

Wear reduces the thickness of the brake disc around the contact surface of the brake linings.

Brake discs - wear limit	
front	2.5 mm (0.098 in)
rear	3.5 mm (0.138 in)

- » If the brake disc thickness is less than the specified value:
  - Change the front brake disc. 🔌
  - Change the rear brake disc. 🔌
- Check the front and rear brake discs for damage, cracking, and deformation.
  - » If the brake disc exhibits damage, cracking, or deformation:
    - Change the front brake disc. 🔌
    - Change the rear brake disc. 🔌

# 12.4 Checking the front brake fluid level

# Warning

**Danger of accidents** An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

# Warning

Danger of accidents Old brake fluid reduces the braking effect.

 Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

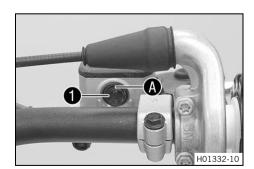

- Check the front brake linings. (
p. 80)

## Main work

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Check the brake fluid level in the viewer 1.
  - » If the brake fluid level is below the A marking:
    - Add front brake fluid. 🔧 (🕮 p. 79)

•

# 12.5 Adding front brake fluid 🔧

# Warning

**Danger of accidents** An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

# Warning

Skin irritation Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

# Warning

**Danger of accidents** Old brake fluid reduces the braking effect.

 Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

# Note

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

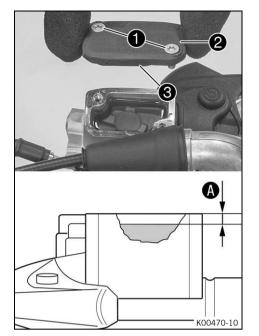

# Info

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint. Only use clean brake fluid from a sealed container.

## **Preparatory work**

# **12 BRAKE SYSTEM**

## Main work

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws 1.
- Remove cover **2** with membrane **3**.
- Add brake fluid to level **A**.

Guideline

Level 🚯 (brake fluid level below reservoir rim)	5 mm (0.2 in)
---	---------------

Brake fluid DOT 4 / DOT 5.1 (🕮 p. 129)

Position the cover with the membrane. Mount and tighten the screws.

# lnfo

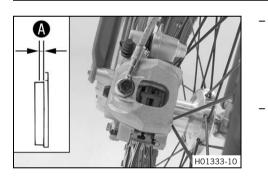

Clean up overflowed or spilled brake fluid immediately with water.

# 12.6 Checking the front brake linings

# Warning

**Danger of accidents** Worn-out brake linings reduce the braking effect.

 Ensure that worn-out brake linings are replaced immediately. (Your authorized KTM workshop will be glad to help.)

- Check the brake linings for minimum thickness  $\mathbf{A}$ .
  - Minimum thickness
     ≥ 1 mm (≥ 0.04 in)

     »
     If the minimum thickness is less than specified:

     –
     Change the front brake linings.
- Check the brake linings for damage and cracking.
- » If damage or wear is encountered:
  - Change the front brake linings. 🔧 (🕮 p. 80)

# 12.7 Changing the front brake linings 🔌

# Warning

**Danger of accidents** Incorrect maintenance will cause the brake system to fail.

- Ensure that service work and repairs are performed professionally. (Your authorized KTM workshop will be glad to help.)

# Warning

Skin irritation Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

# Warning

Danger of accidents Old brake fluid reduces the braking effect.

 Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

# Warning

Danger of accidents Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

# Warning

**Danger of accidents** Brake linings which have not been approved alter the braking efficiency.

Not all brake linings are tested and approved for KTM motorcycles. The structure and friction coefficient of the brake linings, and thus their brake power, may vary greatly from that of original brake linings. If brake linings are used that differ from the original equipment, compliance with the original homologation is not guaranteed. In this case, the vehicle no longer corresponds to its condition at delivery and the warranty shall be void.

- Only use brake linings approved and recommended by KTM.

# Note

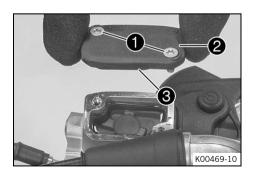

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

# Info

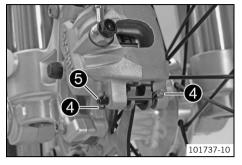

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

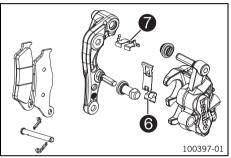

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint. Only use clean brake fluid from a sealed container.

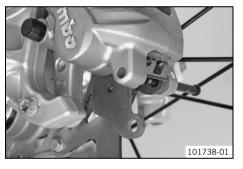

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws ①.
- Take off cover 2 with membrane 3.
- Manually press the brake caliper toward the brake disc to push back the brake pistons. Ensure that brake fluid does not flow out of the brake fluid reservoir, if necessary extract excess.

# **12 BRAKE SYSTEM**

# lnfo

Make sure that you do not press the brake caliper against the spokes when pushing back the brake pistons.

- Remove cotter pin (4), pull out pin (5), and remove the brake linings.
- Clean the brake caliper and brake caliper support.

Check that leaf spring in the brake caliper and sliding plate in the brake caliper support are seated correctly.

Insert the new brake linings, insert the pin, and mount the cotter pins.

# Always change the brake linings in pairs.

- Operate the hand brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point.
- Correct the brake fluid quantity to level **(A)**. Guideline

Level \Lambda (brake fluid level	5 mm (0.2 in)
below reservoir rim)	

Brake fluid DOT 4 / DOT 5.1 (🕮 p. 129)

Position cover with membrane. Mount and tighten the screws.

# Info

Clean up overflowed or spilled brake fluid immediately with water.

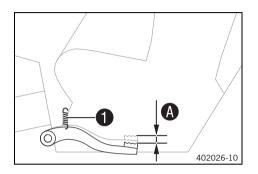

# 12.8 Checking the free travel of foot brake lever

# Warning

Danger of accidents The brake system fails in the event of overheating.

If there is no free travel on the foot brake lever, pressure builds up in the brake system on the rear brake.

- Set the free travel on the foot brake lever in accordance with the specification.

- Disconnect spring **1**.
- Move the foot brake lever back and forth between the end stop and the contact to the foot brake cylinder piston and check free travel  $(\mathbf{A})$ .

Guideline

Free travel at foot brake lever 3 ... 5 mm (0.12 ... 0.2 in)

- » If the free travel does not meet specifications:
- Reconnect spring 1.

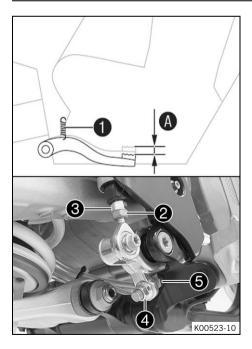

# 12.9 Adjusting the basic position of the foot brake lever 🔌

# Warning

Danger of accidents The brake system fails in the event of overheating.

If there is no free travel on the foot brake lever, pressure builds up in the brake system on the rear brake.

- Set the free travel on the foot brake lever in accordance with the specification.

- Detach spring 1.
- Loosen nut **2** and, with push rod **3**, turn it back until you have maximum free travel.
- To adjust the basic position of the foot brake lever to individual requirements, loosen nut 4 and turn screw 5 accordingly.

The range of adjustment is limited.

- Turn push rod ③ accordingly until you have free travel ④. If necessary, adjust the basic position of the foot brake lever.
   Guideline
  - Free travel at foot brake lever 3 ... 5 mm (0.12 ... 0.2 in)
  - Hold screw (5) and tighten nut (4). Guideline

Nut, foot brake lever	M8	20 Nm (14.8 lbf ft)
stop		

- Hold push rod 3 and tighten nut 2.

# Guideline

Remaining nuts, chassis	M6	10 Nm (7.4 lbf ft)
----------------------------	----	--------------------

Attach spring 🚺.

# 12.10 Checking the rear brake fluid level

# Warning

**Danger of accidents** An insufficient brake fluid level will cause the brake system to fail. If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

# Warning

Danger of accidents Old brake fluid reduces the braking effect.

- Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

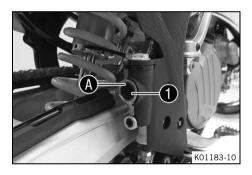

# Preparatory work

• Check the brake linings of the rear brake. (

P. 86)

- Stand the vehicle upright.
- Check the brake fluid level in level viewer 1.
  - » If the brake fluid has dropped below marking A:
    - Add rear brake fluid. 🔧 (🕮 p. 84)

# 12.11 Adding rear brake fluid 🔧

# Warning

Danger of accidents An insufficient brake fluid level will cause the brake system to fail.

If the brake fluid level drops below the specified marking or the specified value, the brake system is leaking or the brake linings are worn down.

 Check the brake system and do not continue riding until the problem is eliminated. (Your authorized KTM workshop will be glad to help.)

# Warning

Skin irritation Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

# Warning

Danger of accidents Old brake fluid reduces the braking effect.

 Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

# Note

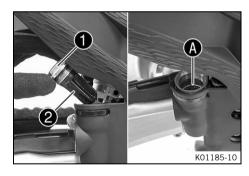

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

# Info

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint. Only use clean brake fluid from a sealed container.

# **Preparatory work**

- Check the brake linings of the rear brake. (
p. 86)

# Main work

- Stand the vehicle upright.
- Remove screw cap **1** with membrane **2** and the O-ring.
- Add brake fluid to level A.

Brake fluid DOT 4 / DOT 5.1 (
p. 129)

- Mount the screw cap with the membrane and the O-ring.

# Info

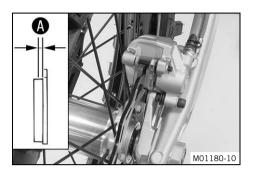

Clean up overflowed or spilled brake fluid immediately with water.

# 12.12 Checking the brake linings of the rear brake

# Warning

Danger of accidents Worn-out brake linings reduce the braking effect.

Ensure that worn-out brake linings are replaced immediately. (Your authorized KTM workshop will be glad to help.)

 Minimum thickness
 ≥ 1 mm (≥ 0.04 in)

 »
 If the minimum thickness is less than specified:

 –
 Change the rear brake linings. 

 (Image the rear brake linings.
 (Image p. 86)

Check the brake linings for minimum thickness (A).

- Check the brake linings for damage and cracking.
  - » If damage or wear is encountered:
    - Change the rear brake linings. 🔌 (🕮 p. 86)

# 12.13 Changing the rear brake linings 🔌

## Warning

**Danger of accidents** Incorrect maintenance will cause the brake system to fail.

 Ensure that service work and repairs are performed professionally. (Your authorized KTM workshop will be glad to help.)

# Warning

Skin irritation Brake fluid causes skin irritation.

- Keep brake fluid out of the reach of children.
- Wear suitable protective clothing and safety glasses.
- Do not allow brake fluid to come into contact with the skin, the eyes or clothing.
- Consult a doctor immediately if brake fluid has been swallowed.
- Rinse the affected area with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water immediately and consult a doctor if brake fluid comes into contact with the eyes.
- If brake fluid spills on to your clothing, change the clothing.

# Warning

Danger of accidents Old brake fluid reduces the braking effect.

 Make sure that brake fluid for the front and rear brake is changed in accordance with the service schedule. (Your authorized KTM workshop will be glad to help.)

# Note

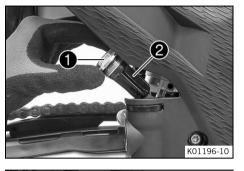

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

# Info

Never use DOT 5 brake fluid. It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

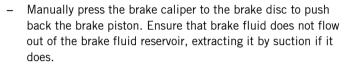

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint. Only use clean brake fluid from a sealed container.

- Stand the vehicle upright.

- Remove screw cap 🚺 with membrane 2 and the O-ring.

## Info

Make sure when pushing back the brake piston that you do not press the brake caliper against the spokes.

- Remove cotter pins (3), pull out pin (4), and remove the brake linings.
- Clean the brake caliper and brake caliper support.
  - Check that leaf spring (5) in the brake caliper and sliding plate (6) in the brake caliper support are seated correctly.

## Info

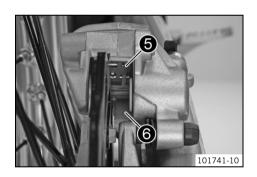

The arrow on the leaf spring points in the rotation direction of the brake disc.

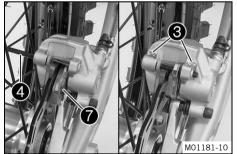

Insert the new brake linings, insert pin 4, and mount cotter pins 3.

# Info

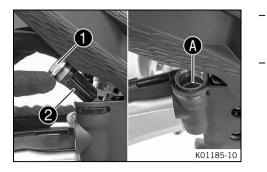

Always change the brake linings in pairs. Make sure that decoupling plate **7** is mounted on the piston side brake lining.

 Operate the foot brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point.

# **12 BRAKE SYSTEM**

Add brake fluid to level 🗛.

Brake fluid DOT 4 / DOT 5.1 (
p. 129)

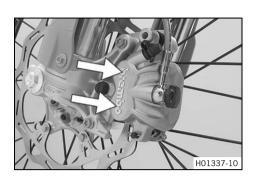

Mount and tighten screw cap ① with membrane ② and the O-ring.

# • Info

Clean up overflowed or spilled brake fluid immediately with water.

•

# 13.1 Removing the front wheel 🔦

## Preparatory work

- Raise the motorcycle with a lift stand. (
p. 46)

## Main work

 Press the brake caliper onto the brake disc by hand in order to push back the brake pistons.

Make sure that you do not press the brake caliper against the spokes when pushing back the brake pistons.

- Loosen screw 1 by several rotations.
- Loosen screws **2**.
- Press on screw **1** to push the wheel spindle out of the axle clamp.
- Remove screw 1.

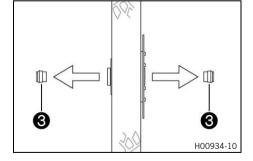

# Warning

**Danger of accidents** Damaged brake discs reduce the braking effect.

- Always lay the wheel down in such a way that the brake disc is not damaged.
- Holding the front wheel, withdraw the wheel spindle. Take the front wheel out of the fork.

Do not pull the hand brake lever when the front wheel is removed.

# · Remove spacers **3**.

89

# 13.2 Installing the front wheel 🔌

# Warning

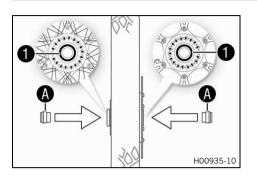

8

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.

»

- Always keep the brake discs free of oil and grease.
  - Clean the brake discs with brake cleaner when necessary.

00454-11

- Check the wheel bearing for damage and wear.
  - If the wheel bearing is damaged or worn:
    - Change front wheel bearing. 🔌
- Clean and grease shaft seal rings 
   and contact surface 
   of the spacers.
   A state of the spacers

Long-life grease (🕮 p. 131)

- Insert the spacers.
- Clean and grease the wheel spindle.

Long-life grease (🕮 p. 131)

- Lift the front wheel into the fork, position it, and insert the wheel spindle.
  - ✓ The brake linings are correctly positioned.
- Mount and tighten screw 2.

Guideline

Screw, front wheel	M20x1.5	35 Nm (25.8 lbf ft)
spindle		

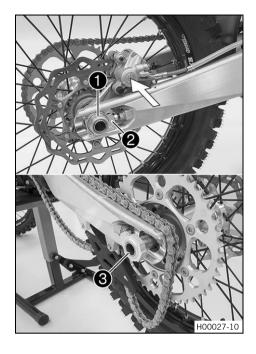

- Operate the hand brake lever several times until the brake linings are seated correctly against the brake disc.
- Remove the motorcycle from the lift stand. (IP p. 46)
- Operate the front brake and compress the fork a few times firmly.
  - ✓ The fork legs straighten.
- Tighten screws 🚯.

Guideline

	Screw, fork stub	M8	15 Nm (11.1 lbf ft)
--	------------------	----	---------------------

# 13.3 Removing the rear wheel 🔌

# Preparatory work

# Main work

- Press the brake caliper onto the brake disc by hand in order to push back the brake piston.

# Info

Make sure when pushing back the brake piston that you do not press the brake caliper against the spokes.

# - Remove nut 🚺.

- Remove chain adjuster **2**. Pull out wheel spindle **3** far enough to allow the rear wheel to be pushed forward.
  - Push the rear wheel forward as far as possible. Remove the chain from the rear sprocket.

# Info

Cover the components to protect them against damage.

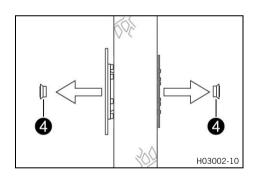

# Warning

**Danger of accidents** Damaged brake discs reduce the braking effect.

- Always lay the wheel down in such a way that the brake disc is not damaged.
- Holding the rear wheel, withdraw the wheel spindle. Take the rear wheel out of the swingarm.

# Info

Do not operate the foot brake lever when the rear wheel is removed.

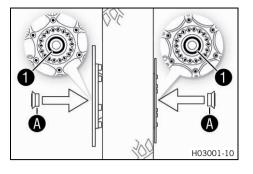

## Remove spacers 4.

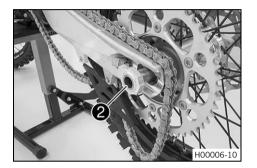

13.4 Installing the rear wheel 🔌

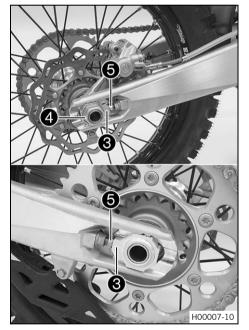

# Warning

**Danger of accidents** Oil or grease on the brake discs reduces the braking effect.

- Always keep the brake discs free of oil and grease.
- Clean the brake discs with brake cleaner when necessary.

## Main work

- Check the wheel bearing for damage and wear.
  - » If the wheel bearing is damaged or worn:
    - Change the rear wheel bearing. 🔌
- Clean and grease shaft seal rings 1 and contact surface A of the spacers.

Insert the spacers.

- Clean and grease the wheel spindle.

Long-life grease (🕮 p. 131)

- Position the rear wheel and insert wheel spindle 2.
- ✓ The brake linings are correctly positioned.
- Mount the chain.
- Position chain adjuster 3. Mount nut 4, but do not tighten it yet.
- Make sure that chain adjusters ③ are fitted correctly on adjusting screws ⑤.
- Check the chain tension. (🕮 p. 67)
- Tighten nut 4.

Guideline

Nut, rear wheel spin-	M25x1.5	80 Nm (59 lbf ft)
dle		

# Info

- The wide adjustment range of the chain adjusters (32 mm (1.26 in)) enables different secondary ratios with the same chain length. Chain adjusters **3** can be turned by 180°.
- Operate the foot brake lever repeatedly until the brake linings are in contact with the brake disc and there is a pressure point.

# **Finishing work**

- Remove the motorcycle from the lift stand. (IP p. 46)

# 13.5 Checking the tire condition

# Info

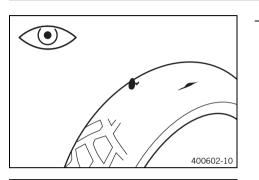

Only mount tires approved and/or recommended by KTM.

Other tires could have a negative effect on handling characteristics.

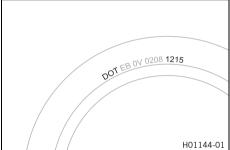

The type, condition, and air pressure of the tires all have a major impact on the handling of the motorcycle.

The tires mounted on the front and rear wheels must have a similar profile.

Worn tires have a negative effect on handling characteristics, especially on wet surfaces.

- Check the front and rear tires for cuts, run-in objects, and other damage.
  - » If the tires have cuts, run-in objects, or other damage:
     Change the tires. ◄

Check the tire age.

Info The tire date of manufacture is usually contained in the tire label and is indicated by the last four digits of the **DOT** number. The first two digits indicate the week of manufacture and the last two digits the year of manufacture. KTM recommends that the tires be changed after 5

years at the latest, regardless of the actual state of wear.

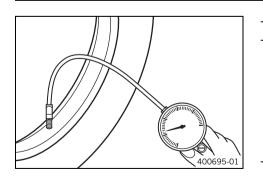

- If the tires are more than 5 years old:
  - Change the tires. 🔦

13.6 Checking the tire air pressure

# Info

Low tire air pressure leads to abnormal wear and overheating of the tire.

Correct tire air pressure ensures optimal riding comfort and maximum tire service life.

- Remove the dust cap.
- Check the tire air pressure when the tires are cold.

Tire air pressure off road	
front	1.0 bar (15 psi)
rear	1.0 bar (15 psi)

If the tire pressure does not meet specifications:
 Correct the tire pressure.

Mount the dust cap.

# 13.7 Checking spoke tension

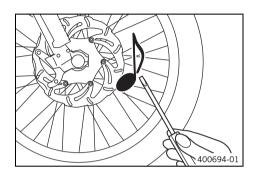

# Warning

**Danger of accidents** Incorrectly tensioned spokes impair the handling characteristic and result in secondary damage.

The spokes break due to being overloaded if they are too tightly tensioned. If the tension in the spokes is too low, then lateral and radial run-out will form in the wheel. Other spokes will become looser as a result.

 Check spoke tension regularly, and in particular on a new vehicle. (Your authorized KTM workshop will be glad to help.)

Strike each spoke briefly using a screwdriver blade.

# Info

The frequency of the sound depends on the spoke length and spoke diameter.

If you hear different tone frequencies from different spokes of equal length and diameter, this is an indication of different spoke tensions.

You should hear a high note.

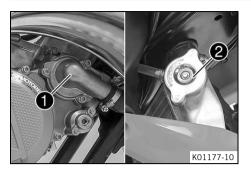

- » If the spoke tension differs:
  - Correct the spoke tension. 🔌
- Check the spoke torque.

# Guideline

Spoke nipple, front wheel	M4.5	6 Nm (4.4 lbf ft)
Spoke nipple, rear wheel	M4.5	6 Nm (4.4 lbf ft)
Torque wrench set (58429094000)		

•

# 14.1 Cooling system

Water pump **1** in the engine ensures forced circulation of the coolant.

The pressure resulting from the warming of the cooling system is regulated by a valve in radiator cap **2**. This ensures that operating the vehicle at the specified coolant temperature will not result in a risk of malfunctions.

120 °C (248 °F)

Cooling is effected by the air stream.

The lower the speed, the less the cooling effect. Dirty cooling fins also reduce the cooling effect.

# 14.2 Radiator cover

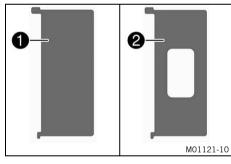

# lnfo

Do not use radiator covers in difficult operating conditions.

The radiator cover is mounted in front of the left radiator between the radiator shield and radiator.

The radiator cover keeps the coolant temperature in the correct range.

Coolant temperature 65 ... 70 °C (149 ... 158 °F)

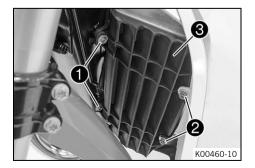

The radiator cover is installed in front of the left radiator, depending on the ambient temperature.

Full radiator cover	< 7 °C (< 45 °F)
Half radiator cover <b>2</b>	7 16 °C (45 61 °F)
No radiator cover	> 16 °C (> 61 °F)

# lnfo

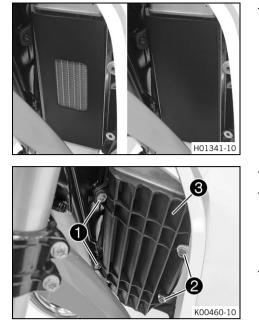

Do not use both radiator covers at the same time.

# 14.3 Installing the radiator cover

- Remove screws 1.
  - Remove screws 2.
- Take off radiator shield 3.

# 14 COOLING SYSTEM

- Position the matching radiator cover (🕮 p. 95).
  - The larger catch is located at the top left.

Do not use both radiator covers at the same time.

- Position radiator shield 3.
- Mount and tighten screws 2.
   Guideline

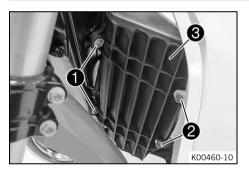

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
	•	

• Mount and tighten screws **1**.

Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
------------------------------	----	--------------------

# 14.4 Removing the radiator cover

- Remove screws 1.
- Remove screws 2.
- Take off radiator shield 3.
- Remove the radiator cover.
- Position radiator shield 3.
- Mount and tighten screws 2.

Guideline

Guidalina

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
------------------------------	----	--------------------

Mount and tighten screws 1.

duldeline

# 14.5 Checking the antifreeze and coolant level

# Warning

**Danger of scalding** During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses
  or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

# Warning

 $\label{eq:Danger of poisoning} \quad \mbox{Coolant is toxic and a health hazard.}$ 

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

# Condition The engine is cold. Stand the motorcycle upright on a horizontal surface. Remove the radiator cap. Check the coolant antifreeze. -25 ... -45 °C (-13 ... -49 °F) \* If the antifreeze in the coolant does not match the specified value: Correct the coolant antifreeze. Check the coolant level in the radiator. Coolant level (A above the radiator fins) 10 mm (0.39 in)

- » If the coolant level does not match the specified value:
  - Correct the coolant level.

Coolant	(🕮 p.	129)	

Mount the radiator cap.

# 14.6 Checking the coolant level

# Warning

Danger of scalding During motorcycle operation, the coolant gets very hot and is under pressure.

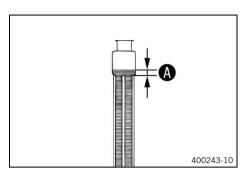

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses
  or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

# Warning

Danger of poisoning Coolant is toxic and a health hazard.

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

# Condition

The engine is cold.

- Stand the motorcycle upright on a horizontal surface.
- Remove the radiator cap.
- Check the coolant level in the radiator.

Coolant level \Lambda above the radiator fins	10 mm (0.39 in)
---	-----------------

- » If the coolant level does not match the specified value:
   Correct the coolant level.
- Coolant (興 p. 129) Mount the radiator cap.

# 14.7 Draining the coolant 🔦

# Warning

**Danger of scalding** During motorcycle operation, the coolant gets very hot and is under pressure.

- Do not open the radiator, the radiator hoses or other cooling system components if the engine or the cooling system are at operating temperature.
- Allow the cooling system and the engine to cool down before you open the radiator, the radiator hoses
  or other components of the cooling system.
- In the event of scalding, rinse the area affected immediately with lukewarm water.

# Warning

Danger of poisoning Coolant is toxic and a health hazard.

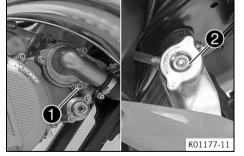

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

# Condition

The engine is cold.

- Position the motorcycle upright.
- Place a suitable container under the water pump cover.
- Remove screw **1**. Take off radiator cap **2**.
- Completely drain the coolant.
- Mount and tighten screw 
   with a new seal ring.
   Guideline

Drain plug, water	M6	8 Nm (5.9 lbf ft)
pump cover		

# 14.8 Refilling with coolant 🔦

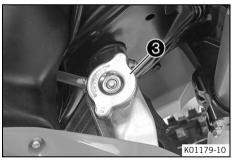

# Warning

**Danger of poisoning** Coolant is toxic and a health hazard.

- Keep coolant out of the reach of children.
- Do not allow coolant to come into contact with the skin, the eyes and clothing.
- Consult a doctor immediately if coolant is swallowed.
- Rinse the affected area immediately with plenty of water in the event of contact with the skin.
- Rinse eyes thoroughly with water and consult a doctor immediately if coolant gets into the eyes.
- Change clothing if coolant spills onto your clothing.

- Make sure that screw 1 is tightened.
- Position the motorcycle upright.
- Completely fill the radiator with coolant.
  - Coolant (🕮 p. 129)
- Loosen screw 2 until coolant escapes without bubbles.
- Mount and tighten screw 2.
   Guideline

Bleeder screw, cylin-	M6	8 Nm (5.9 lbf ft)
der head		

- Completely fill the radiator with coolant.

Coolant (🕮 p. 129)

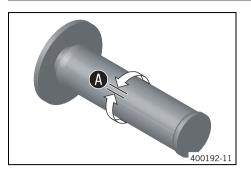

- Mount radiator cap 3.

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.
- Allow the engine to warm up and cool down again.
- Check the coolant level. (🕮 p. 97)

# 15.1 Checking the play in the throttle cable

- Check the throttle grip for smooth operation.
- Move the handlebar to the straight-ahead position. Move the throttle grip back and forth slightly to determine the play in throttle cable **A**.

Play in throttle cable	2 3 mm (0.08
	0.12 in)

- » If the throttle cable play does not meet specifications:

# Danger

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.
- Start the engine and let it run idle. Move the handlebar to and fro over the entire steering range.

The idle speed must not change.

- » If the idle speed changes:

# 15.2 Adjusting the play in the throttle cable 🔌

# lnfo

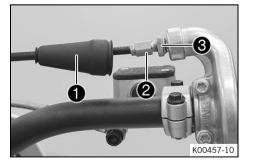

If the correct routing of the throttle cable has already been secured, the fuel tank does not need to be removed.

# Preparatory work

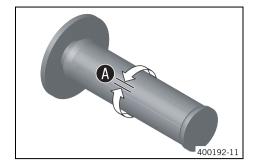

- Remove the seat. (🕮 p. 58)
- Turn tap handle of the fuel tap to the **OFF** position.
- Remove the fuel tank. 🔌 (🕮 p. 64)

# Main work

- Move the handlebar to the straight-ahead position.
- Push back sleeve 1.
- Ensure that the throttle cable sleeve is pushed all the way into barrel adjuster 2.
- Loosen nut 🕄 .

# TUNING THE ENGINE 15

 Turn barrel adjuster 2 so that there is play A in the throttle cable at the throttle grip.

Guideline

Play in throttle cable	2 3 mm (0.08
	0.12 in)

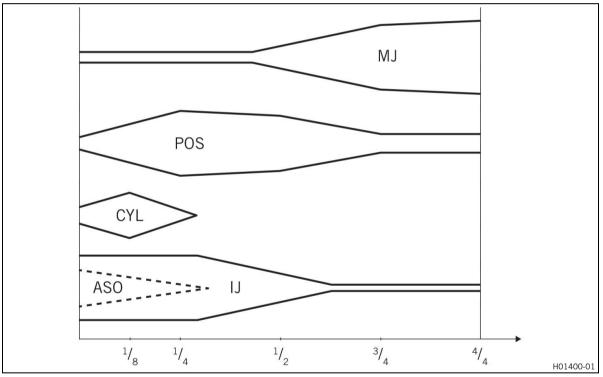

- Tighten nut 3.
- Slide on sleeve 1.

## **Finishing work**

- Check the throttle grip for smooth operation.
- Install the fuel tank. 🔧 (🕮 p. 65)
- Mount the seat. (🕮 p. 58)
- Check the play in the throttle cable. (
  p. 100)

# 15.3 Carburetor setting

# Effects of the carburetor setting

The different carburetor components must be tuned both to one another and for the use intended.

# Main jet MJ

The main jet MJ has the greatest influence with the throttle slide open (full throttle).

If the insulator of a new spark plug is very light or white after a brief ride at full throttle, or if the engine knocks, a larger main jet needs to be used. If the insulator is dark brown or sooty, a smaller main jet needs to be used.

# **Needle position POS**

The needle position has the greatest influence in the mid throttle slide range.

If the engine stutters when accelerating with a partially open throttle slide, the jet needle must be lowered. If the engine knocks when accelerating at the full power rpm range, the jet needle must be raised.

# Cylindrical part of the needle CYL

The cylindrical part of the needle has the greatest influence when the throttle slide is almost closed.

# Idling jet IJ

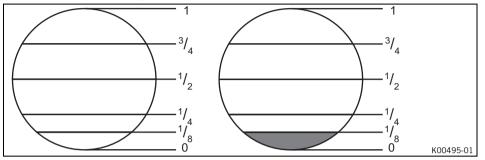

The idling jet has the greatest influence in the low to mid throttle slide range.

If the engine stutters when idling or accelerating with a partially open throttle slide, a smaller idling jet must be used. If the engine knocks in this power range, then a larger idling jet must be used.

# Idle air adjusting screw open ASO

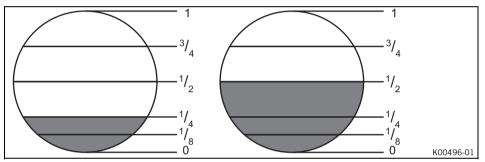

The idle air adjusting screw has the greatest influence during idling.

Influence of throttle slide adjustment

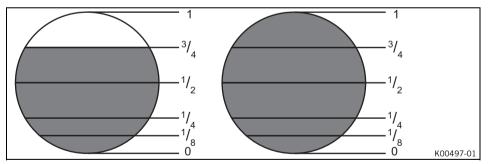

The idling jet has the greatest influence when the throttle slide is closed. The first cylindrical part of the needle and the clip position have only minimal influence.

When the throttle slide is 1/8 open, the first cylindrical part of the needle, the idling jet and the clip position have the greatest influence.

When the throttle slide is 1/4 open, the idling jet and the clip position have the greatest influence. The influence of the first cylindrical part of the needle is less.

When the throttle slide is 1/2 open, the position of the needle has the greatest influence. The influence of the main jet and the idling jet is only minimal.

When the throttle slide is 3/4 open, the influence of the main jet is greatest. The clip position and the idling jet have only minimal influence.

When the throttle slide is fully open, the influence of the main jet is greatest. The clip position and the idling jet have only minimal influence.

## **Needle overview**

The jet needles available are shown in the following table.

	1	2	3	4
А	6BFY42-71	6BFY43-71	6BFY44-71	2,71 mm
В	6BFY42-72	6BFY43-72	6BFY44-72	2.72 mm
С	6BFY42-73	6BFY43-73	6BFY44-73	2.73 mm
D	6BFY42-74	6BFY43-74	6BFY44-74	2.74 mm
E	6BFY42-75	6BFY43-75	6BFY44-75	2.75 mm
F	6BFY42-76	6BFY43-76	6BFY44-76	2.76 mm
				402674-0

Column 2 corresponds to a needle in the standard position.

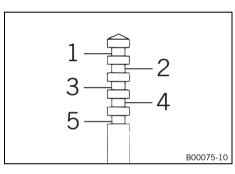

Column 1 corresponds to a needle which is half a clip leaner.

Column **3** corresponds to a needle which is half a clip richer.

Column **4** specifies the diameter of the first cylindrical part of the needle. The smaller the diameter of the first cylindrical part of the needle, the richer the carburation. The larger the diameter of the first cylindrical part of the needle, the leaner the carburation. The first cylindrical part of the needle has the greatest influence in the lowest load adjustment.

# • Info

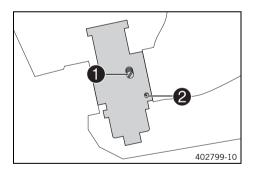

The top right jet needle **A3** corresponds to the richest setting of the carburetor, and the bottom left jet needle **F1** corresponds to the leanest. The optimal carburetor tuning is shown under the respective model.

## **Clip position**

1... 5Clip position from aboveThe five possible clip positions are shown here.The carburetor tuning depends on the defined ambient and operating conditions.

# 15.4 Carburetor – idle

The idle setting of the carburetor has a big influence on the starting behavior, stable idling, and the response to throttle opening. This means that an engine with a correctly set idle speed is easier to start than if the idle speed is set wrongly.

## Info

The carburetor and its components are subject to increased wear caused by engine vibration. Wear can result in mal-functioning.

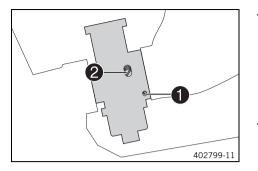

The factory setting for the carburetor is set for the following values.

Height above sea level	301 750 m (988 2,461 ft)	
Ambient tempera- ture	16 24 °C (61 75 °F)	
Super unleaded (98 octane) mixed with 2-stroke engine oil (1:40) ( p. 130)		

The idle speed is adjusted with adjusting screw 1.

The idle mixture is adjusted using the idle air adjusting screw  $\mathbf{2}$ .

# 15.5 Carburetor – adjusting the idle speed 🔌

Screw in idle air adjusting screw **1** all the way and turn it to the specified basic position.

## Info

- The basic adjustment is shown under the respective model.
- Run the engine until warm.

# Guideline

Warm-up time

# **Danger**

**Danger of poisoning** Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

≥ 5 min

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.
- Adjust the idle speed with adjusting screw 2.
   Guideline

Choke function deactivated – The choke lever is pushed in to the stop. ( p. 17)	
Idle speed	1,400 1,500 rpm

- Turn idle air adjusting screw **1** slowly in a clockwise direction until the idle speed begins to fall.
- Note the position and turn the idle air adjusting screw slowly counterclockwise until the idle speed again begins to fall.
- Adjust to the point between these two positions with the highest idle speed.

# Info

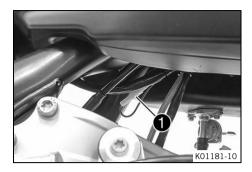

If there is a big engine speed rise, reduce the idle speed to a normal level and repeat the above steps. If the procedure described here does not lead to satisfactory results, the cause may be a wrongly dimensioned idling jet. If you can turn the idle air adjusting screw to the end

If you can turn the idle air adjusting screw to the end without any change of engine speed, mount a smaller idling jet.

After changing the jet, start from the beginning with the adjusting steps.

Following extreme air temperature or altitude changes, adjust the idle speed again.

# 15.6 Plug-in connector of ignition timing map adjustment

Plug-in connector **1** of the ignition timing map adjustment is located on the frame under the fuel tank.

# Possible states

- Soft The plug-in connector of the ignition timing map adjustment is disconnected to achieve better rideability.
- Performance The plug-in connector of the ignition timing map adjustment is joined to achieve higher performance.

# 15.7 Changing the ignition timing map

# Switching the ignition timing map from Performance to Soft

Disconnect plug-in connector 1 of the ignition timing map adjustment. (Figure K01181-10 P. 105)
 Soft – better rideability

## Switching the ignition timing map from Soft to Performance

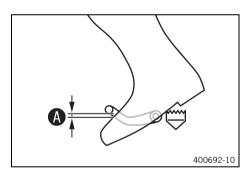

- Join plug-in connector 🕕 of the ignition timing map adjustment. (Figure K01181-10 🕮 p. 105)
  - Performance better performance

# 15.8 Checking the basic position of the shift lever

# Info

When driving, the shift lever must not touch the rider's boot when in the basic position.

When the shift lever keeps touching the boot, the transmission will be subject to an excessive load.

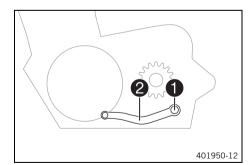

Sit on the vehicle in the riding position and determine distance A between the upper edge of your boot and the shift lever.

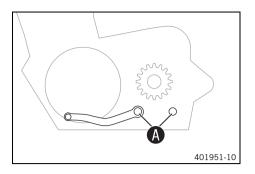

Distance between shift lever	10 20 mm (0.39
and upper edge of boot	0.79 in)

- » If the distance does not meet specifications:
  - Set the basic position of the shift lever. 🔌 (🕮 p. 105)

15.9 Adjusting the basic position of the shift lever 🔌

Remove screw 1 with the washers and take off shift lever 2.

- Clean gear teeth (A) of the shift lever and shift shaft.
- Mount the shift lever on the shift shaft in the required position and engage the gearing.

## • Info The

The range of adjustment is limited. The shift lever must not come into contact with any other vehicle components during the shift procedure.

Mount and tighten screw 🕕 with washers.

# Guideline

\_

Screw, shift M6	14 Nm (10.3 lbf ft)
lever	Loctite®243™

#### 16.1 Emptying the carburetor float chamber 🔌

## 1 Danger

Fire hazard Fuel is highly flammable.

The fuel in the fuel tank expands when warm and can escape if overfilled.

- Do not refuel the vehicle in the vicinity of open flames or lit cigarettes.
- Switch off the engine for refueling.
- Make sure that no fuel is spilled; particularly not on hot parts of the vehicle.
- If any fuel is spilled, wipe it off immediately.
- Observe the specifications for refueling.

### Warning

Danger of poisoning Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.
- Keep fuels correctly in a suitable canister, and out of the reach of children.

### Note

**Environmental hazard** Improper handling of fuel is a danger to the environment.

- Do not allow fuel to enter the groundwater, the soil, or the sewage system.

### Info

Carry out this work with a cold engine.

Water in the float chamber results in malfunctioning.

K00472-10

### Preparatory work

- Turn tap handle of the fuel tap to the **OFF** position.
  - ✓ Fuel no longer flows from the fuel tank to the carburetor.

#### Main work

- Place a cloth under the carburetor to capture the draining fuel.
- Remove screw plug **1**.
- Fully drain the fuel.
- Mount and tighten the screw plug.

## **16 SERVICE WORK ON THE ENGINE**

#### 16.2 Checking the gear oil level

### • Info

The gear oil level must be checked when the engine is cold.

#### Preparatory work

- Stand the motorcycle upright on a horizontal surface.

#### Main work

- Remove screw for checking gear oil level 1.
- Check the gear oil level.

A small quantity of gear oil must run out of the drilled hole.

- » If no gear oil runs out:
  - Add gear oil. 🔌 (🛤 p. 109)
- Mount and tighten the gear oil monitoring screw. Guideline

Screw, gear oil level	M6	8 Nm (5.9 lbf ft)
check		

### 16.3 Changing the gear oil 🔌

### Warning

Danger of scalding Engine and gear oil get very hot when the motorcycle is ridden.

- Wear suitable protective clothing and safety gloves.
  - In the event of scalding, rinse the area affected immediately with lukewarm water.

### B Note

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

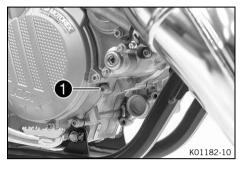

### Info

Drain the gear oil while the engine is at operating temperature.

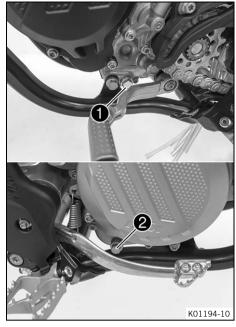

#### Preparatory work

- Park the motorcycle on a level surface.

- Place a suitable container under the engine.

#### SERVICE WORK ON THE ENGINE 16

#### Main work

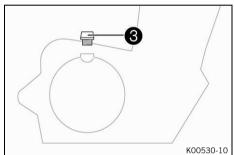

- Remove the gear oil drain plug with magnet **①**. \_
- Remove gear oil drain plug **2**.
- Let the gear oil drain fully. \_
- Clean the gear oil drain plug thoroughly. \_
- Clean the sealing surface on the engine.
- Mount and tighten gear oil drain plug with the magnet 1 and \_ the new seal ring.

### Guideline

Gear oil drain plug with magnet	M12x1.5	20 Nm (14.8 lbf ft)
	•	

Mount gear oil drain plug **2** with the new seal ring and tighten. Guideline

Gear oil drain plug M1	0x1 15 Nm (11.1 lbf ft)
------------------------	-------------------------

Remove filler plug 3 with the O-ring, and fill up with gear oil. \_

Gear oil	0.80 l (0.85 qt.)	Engine oil (15W/50) (톟 p. 129)	
----------	----------------------	--------------------------------------	--

Mount and tighten the filler plug together with the O-ring.

### Danger

Danger of poisoning Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.
- Start the engine and check for tightness. \_

#### **Finishing work**

Check the gear oil level. (
p. 108) \_

#### 16.4 Adding gear oil 🔌

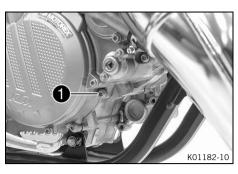

Info

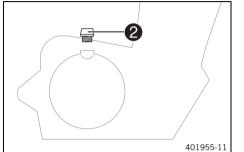

Too little gear oil or poor-quality gear oil results in premature wear to the transmission. Gear oil must only be topped up when the engine is cold.

#### **Preparatory work**

- Park the motorcycle on a level surface.

#### **SERVICE WORK ON THE ENGINE** 16

#### Main work

\_

Remove screw for checking gear oil level **1**.

- Remove filler plug **2** with O-ring. \_
- Add gear oil until it emerges from the drill hole of the gear oil \_ monitoring screw.

Engine oil (15W/50) (🕮 p. 129)

Mount and tighten the gear oil monitoring screw. Guideline

dudeline			
Screw, gear oil level	M6	8 Nm (5.9 lbf ft)	
check			

Mount and tighten oil filler plug **2** with the O-ring. \_

#### **Finishing work**

Danger

Danger of poisoning Exhaust gases are toxic and inhaling them may result in unconsciousness and death.

- Always make sure there is sufficient ventilation \_ when running the engine.
- Use an effective exhaust extraction system when starting or running the engine in an enclosed space.
- Start the engine and check for tightness. \_

### 17.1 Cleaning the motorcycle

### Note

**Material damage** Components become damaged or destroyed if a pressure cleaner is used incorrectly. The high pressure forces water into the electrical components, connectors, throttle cables, and bearings, etc. Pressure which is too high causes malfunctions and destroys components.

- Do not direct the water jet directly on to electrical components, connectors, throttle cables or bearings.
- Maintain a minimum distance between the nozzle of the pressure cleaner and the component.
   Minimum clearance
   60 cm (23.6 in)

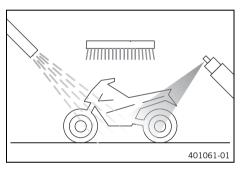

### & Note

Environmental hazard Hazardous substances cause environmental damage.

 Dispose of oils, grease, filters, fuel, cleaning agents, brake fluid, etc., correctly and in compliance with the applicable regulations.

### Info

If you clean the motorcycle regularly, its value and appearance will be maintained over a long period. Avoid direct sunlight on the motorcycle during cleaning.

- Close off the exhaust system to prevent water from entering.
- Remove coarse dirt particles by spraying gently with water.
- Spray very dirty areas with a normal motorcycle cleaner and then clean with a soft brush.

Motorcycle cleaner (🕮 p. 131)

### Info

Use warm water containing normal motorcycle cleaner and a soft sponge.

Never apply motorcycle cleaner to the dry vehicle; always rinse with water first.

- After rinsing the motorcycle with a gentle water spray, allow it to dry thoroughly.
- Empty the carburetor float chamber. 🔧 (🕮 p. 107)
- Remove the plug from the exhaust system.

## Warning

**Danger of accidents** Moisture and dirt impair the brake system.

- Brake carefully several times to dry out and remove dirt from the brake linings and the brake discs.
- After cleaning, take a short ride until the engine reaches operating temperature.

#### Info

The heat produced causes water at inaccessible locations in the engine and brake system to evaporate.

- After the motorcycle has cooled off, lubricate all moving parts and bearings.
  - Clean the chain. (🕮 p. 67)

Treat bare metal parts (except for brake discs and exhaust system) with anti-corrosion materials.

Preserving materials for paints, metal and rubber (
p. 132)

- Treat all plastic parts and powder-coated parts with a mild cleaning and care product.

Special cleaner for glossy and matte paint finishes, metal and plastic surfaces (
p. 132)

◀

### 18.1 Storage

Warning

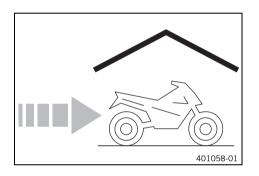

**Danger of poisoning** Fuel is poisonous and a health hazard.

- Avoid skin, eye and clothing contact with fuel.
- Immediately consult a doctor if you swallow fuel.
- Do not inhale fuel vapors.
- In case of skin contact, rinse the affected area with plenty of water.
- Rinse the eyes thoroughly with water, and consult a doctor in case of fuel contact with the eyes.
- Change your clothing in case of fuel spills on them.
- Keep fuels correctly in a suitable canister, and out of the reach of children.

### Info

If you plan to garage the motorcycle for a longer period, perform the following steps or have them performed.

Before storing the motorcycle, check all parts for function and wear. If service, repairs, or replacements are necessary, you should do this during the storage period (less workshop overload). In this way, you can avoid long workshop waiting times at the start of the new season.

 When refueling for the last time before taking the motorcycle out of service, add fuel additive.

Fuel additive (🕮 p. 131)

– Refuel. (🕮 p. 31)

- Clean the motorcycle. (🕮 p. 111)
- Change the gear oil. 🔌 (🕮 p. 108)
- Check the antifreeze and coolant level. (
  p. 96)
- Empty the carburetor float chamber. 🔧 (🕮 p. 107)
- Check the tire air pressure. (🕮 p. 93)
- Store the vehicle in a dry location that is not subject to large fluctuations in temperature.

### Info

KTM recommends jacking up the motorcycle.

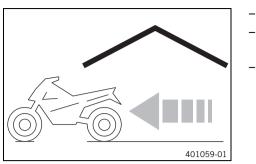

- Raise the motorcycle with a lift stand. (
  P. 46)
- Cover the vehicle with a tarp or similar cover that is permeable to air.

### Info

Do not use non-porous materials since they prevent humidity from escaping, thus causing corrosion. Avoid running the engine for a short time only. Because the engine will not warm up sufficiently, the water vapor produced during combustion will condense, causing engine parts and the exhaust system to rust.

# **18 STORAGE**

### 18.2 Preparing for use after storage

- Remove the motorcycle from the lift stand. (IP p. 46)

4

Take a test ride.

Faults	Possible cause	Action
Engine turns but does not start	Operating error	<ul> <li>Carry out the start procedure.</li> <li>(         p. 27)     </li> </ul>
	Motorcycle was out of use for a long time and there is old fuel in the float chamber	- Empty the carburetor float chamber. (톜 p. 107)
	Fuel feed interrupted	<ul> <li>Check the fuel tank breather.</li> </ul>
		<ul> <li>Clean the fuel tap.</li> </ul>

If the engine is not running smoothly, use a smaller main jet.

### 20.4 Capacities

### 20.4.1 Gear oil

Gear oil	0.80 l (0.85 qt.)	Engine oil (15W/50) (🕮 p. 129)

### 20.4.2 Coolant

Coolant	1.2   (1.3 qt.)	Coolant (🕮 p. 129)

### 20.4.3 Fuel

Total fuel tank capacity, approx.	7.5 I (1.98 US gal)	Super unleaded (98 octane) mixed with 2-stroke engine oil (1:40)
		(學 p. 130)

### 20.5 Chassis

Frame	Central tube frame made of chrome molybdenum ste tubing	
Fork	WP Suspension Upside down AER 48	
Suspension travel		
front	310 mm (12.2 in)	
rear	300 mm (11.81 in)	
Fork offset	22 mm (0.87 in)	
Shock absorber	WP Suspension 5018 DCC Link	
Brake system	Disc brakes, brake calipers on floating bearings	
Brake discs - diameter	· · · ·	
front	260 mm (10.24 in)	

rear	220 mm (8.66 in)
Brake discs - wear limit	
front	2.5 mm (0.098 in)
rear	3.5 mm (0.138 in)
Tire air pressure off road	
front	1.0 bar (15 psi)
rear	1.0 bar (15 psi)
Secondary ratio (All 125 models)	13:50
Secondary ratio (All 150 models)	13:48
Chain	5/8 x 1/4"
Rear sprockets available	48, 50, 52
Steering head angle	63.9°
Wheelbase	1,485 ± 10 mm (58.46 ± 0.39 in)
Seat height unloaded	950 mm (37.4 in)
Ground clearance unloaded	375 mm (14.76 in)
Weight without fuel, approx.	87.5 kg (192.9 lb.)
Maximum permissible front axle load	145 kg (320 lb.)
Maximum permissible rear axle load	190 kg (419 lb.)
Maximum permissible overall weight	335 kg (739 lb.)

### 20.6 Tires

Front tire	Rear tire	
<b>80/100 - 21 51M TT</b> Dunlop GEOMAX MX3S	<b>100/90 - 19 57M TT</b> Dunlop GEOMAX MX3S

### Brake fluid DOT 4 / DOT 5.1

#### Standard/classification

– DOT

#### Guideline

- Use only brake fluid that complies with the specified standard (see specifications on the container) and that exhibits the corresponding properties.

#### **Recommended supplier**

- Castrol
- REACT PERFORMANCE DOT 4

#### Motorex®

- Brake Fluid DOT 5.1

### Coolant

#### Guideline

- Only use high-grade, silicate-free coolant with corrosion inhibitor additive for aluminum motors. Low grade and unsuitable antifreeze causes corrosion, deposits and frothing.
- Do not use pure water as only coolant is able to meet the requirements needed in terms of corrosion protection and lubrication properties.
- Only use coolant that complies with the requirements stated (see specifications on the container) and that has the relevant properties.

Antifreeze protection to at least	-25 °C (-13 °F)
-----------------------------------	-----------------

The mixture ratio must be adjusted to the necessary antifreeze protection. Use distilled water if the coolant needs to be diluted.

The use of premixed coolant is recommended.

Observe the coolant manufacturer specifications for antifreeze protection, dilution and miscibility (compatibility) with other coolants.

### Recommended supplier

### Motorex®

### - COOLANT M3.0

### Engine oil (15W/50)

#### Standard/classification

- JASO T903 MA2 (🕮 p. 133)
- SAE (🕮 p. 133) (15W/50)

#### Guideline

Use only engine oils that comply with the specified standards (see specifications on the container) and that
possess the corresponding properties.

#### **Recommended supplier**

- Motorex®
- Top Speed 4T

### Engine oil, 2-stroke

- Standard/classification
- JASO FD (🕮 p. 133)

### Guideline

Only use high grade 2-stroke engine oil of a reputable brand.

Fully synthetic

Recommended supplier Motorex®

Cross Power 2T

### Fork oil (SAE 4) (48601166S1)

### Standard/classification

– SAE (🕮 p. 133) (SAE 4)

#### Guideline

 Use only oils that comply with the specified standards (see specifications on the container) and that exhibit the corresponding properties.

### Shock absorber fluid (SAE 2.5) (50180751S1)

#### Standard/classification

– SAE (🕮 p. 133) (SAE 2.5)

#### Guideline

 Use only oils that comply with the specified standards (see specifications on the container) and that exhibit the corresponding properties.

#### Super unleaded (ROZ 98 / RON 98 / PON 94)

#### Standard/classification

- DIN EN 228 (ROZ 98 / RON 98 / PON 94)

#### Super unleaded (98 octane) mixed with 2-stroke engine oil (1:40)

Standard/classification

- DIN EN 228
- JASO FD (📖 p. 133) (1:40)

#### Mixture ratio

1:40         Engine oil, 2-stroke (範 p. 129)           Super unleaded (ROZ 98 / RON 98 / PON 94) (顧	p. 130)
---	---------

Recommended supplier Motorex<sup>®</sup>

- Cross Power 2T

### Air filter cleaner

Recommended supplier Motorex®

- Racing Bio Dirt Remover

### **Chain cleaner**

Recommended supplier Motorex® – Chain Clean

### Fuel additive

Recommended supplier Motorex® – Fuel Stabilizer

### High viscosity grease

Recommended supplier SKF<sup>®</sup> - LGHB 2

### Long-life grease

Recommended supplier Motorex® – Bike Grease 2000

### Motorcycle cleaner

Recommended supplier Motorex® – Moto Clean

### Multi-purpose grease (00062010051)

Recommended supplier Klüber Lubrication® – CENTOPLEX 2 EP

### **Off-road chain spray**

Recommended supplier Motorex<sup>®</sup> – Chainlube Offroad

#### Oil for foam air filter

Recommended supplier Motorex®

- Racing Bio Liquid Power

### Preserving materials for paints, metal and rubber

Recommended supplier Motorex® – Moto Protect

### Special cleaner for glossy and matte paint finishes, metal and plastic surfaces

Recommended supplier Motorex<sup>®</sup> – Quick Cleaner

### Universal oil spray

Recommended supplier Motorex® – Joker 440 Synthetic

### **JASO T903 MA2**

Different technical development directions required a separate specification for motorcycles – the **JASO T903 MA2** standard.

Earlier, engine oils from the automobile industry were used for motorcycles because there was no separate motorcycle specification.

Whereas long service intervals are demanded for automobile engines, the focus for motorcycle engines is on high performance at high engine speeds.

In most motorcycle engines, the transmission and clutch are lubricated with the same oil.

The JASO T903 MA2 standard meets these special requirements.

### SAE

The SAE viscosity classes were defined by the Society of Automotive Engineers and are used for classifying oils according to their viscosity. The viscosity describes only one property of oil and says nothing about quality.

### **JASO FD**

JASO FD is a classification for a 2-stroke engine oil that was specifically developed for the extreme demands of racing. Thanks to first rate synthetic esters and specially designed additives, superb combustion is achieved even under extreme operating conditions.
