# **OWNER'S MANUAL 2010**

## **690 Rally Factory Replica**

Art. no. 3211513en

Congratulations on your decision to buy a KTM motorcycle. You are now the owner of a state-of-the-art sports motorcycle that will give you enormous pleasure if you service and maintain it accordingly.

We wish you great pleasure riding the vehicle!

Enter the serial numbers of your vehicle below.

Chassis number (* p. 7)	Dealer's stamp
Engine number ( p. 7)	
Key number ( <b>▼</b> p. 7)	

The owner's manual corresponded to the latest state of this series at the time of printing. Slight deviations resulting from continuing development and design of our motorcycles can however not be completely excluded.

All specifications are non-binding. KTM Sportmotorcycle AG specifically reserves the right to modify or delete technical specifications, prices, colors, forms, materials, services, designs, equipment, etc., without prior notice and without specifying reasons, to adapt these to local conditions, as well as to stop production of a particular model without prior notice. KTM accepts no liability for delivery options, deviations from illustrations and descriptions, as well as misprints and other errors. The models portrayed partly contain special equipment that does not belong to the regular scope of delivery.

## Symbols used

The meaning of specific symbols is described below.

Indicates an expected reaction (e.g. of a work step or a function).

Indicates an unexpected reaction (e.g. of a work step or a function).

All work marked with this symbol requires specialist knowledge and technical understanding. In the interest of your own safety, have these jobs done in an authorized KTM workshop! There, your motorcycle will be serviced optimally by specially trained experts using the specialist tools required.

Identifies a page reference (more information is provided on the specified page).

## **Formats used**

The typographical and other formats used are explained below.

**Specific name** Identifies a proprietary name.

Name Identifies a protected name.

**Brand™** Identifies a trademark.

#### **Use definition**

KTM sport motorcycles are designed and built to withstand the normal stresses and strains of competitive use. The motorcycles comply with currently valid regulations and categories of the top international motorsport organizations.

#### Info

The motorcycle is authorized for public road traffic in the homologous (reduced) version only. In the derestricted version, the motorcycle must be used only on closed off properties remote from public road traffic.

## **Maintenance**

A prerequisite for perfect operation and prevention of wear is that the engine and chassis maintenance and adjustment work described in the owner's manual are properly carried out. Poor adjustment and tuning of the engine and chassis can lead to damage and breakage of components.

Using the motorcycle in extreme conditions such as very muddy or wet terrain can lead to above-average wear of components such as the transmission train or the brakes. For this reason, it may be necessary to service or replace worn parts before the limit specified in the service schedule is reached.

Pay careful attention to the prescribed running-in period, inspection and maintenance intervals. If you observe these exactly, you will ensure a much longer service life for your motorcycle.

## **Warranty**

The work prescribed in the service schedule must be carried out in an authorized KTM workshop only and confirmed in the customer's service record, since otherwise no warranty claims will be recognized. No warranty claims can be granted for damage resulting from manipulations and/or alterations to the vehicle.

#### Fuel, oils, etc.

You should use the fuels, oils and greases according to specifications as listed in the owner's manual.

## Spare parts, accessories

For your own safety, only use spare parts and accessory products that have been approved and/or recommended by KTM and have them installed by an authorized KTM workshop. KTM accepts no liability for other products and any resulting damage or loss. Some spare parts and accessory products are specified in parentheses in the descriptions. Your KTM dealer will be glad to advise you.

The current KTM PowerParts for your vehicle can be found on the KTM website.

International KTM Website: http://www.ktm.com

### **Work rules**

Special tools are necessary for certain tasks. The tools are not contained in the vehicle but can be ordered under the number in parentheses. Example: valve spring mounter (59029019000)

During assembly, non-reusable parts (e.g. self-locking screws and nuts, seals, seal rings, O-rings, pins, lock washers) must be replaced by new parts.

If a thread locker is used on screw connections (e.g. **Loctite®**), the specific manufacturer instructions on its application must be observed.

Parts that are to be reused after disassembly should be cleaned and checked for damage and wear. Change damaged and worn parts. Ensure that the vehicle is roadworthy after completing repair and maintenance work.

#### **Transport**

#### **Note**

Danger of damage The parked vehicle may roll away or fall over.

- Always place the vehicle on a firm and even surface.

#### **Note**

**Fire hazard** Some vehicle components become very hot when the vehicle is operated.

- Do not park the vehicle near flammable or explosive substances. Do not place objects on the vehicle while it is still warm from being run. Always let the vehicle cool first.
- Switch off engine.
- Use straps or other suitable devices to secure the motorcycle against accidents or falling over.

#### **Environment**

Offroad motorcycling is a wonderful sport and we naturally hope that you will be able to enjoy it to the fullest. However, it is a potential problem for the environment and can lead to conflicts with other persons. But if you use your motorcycle responsibly, you can ensure that such problems and conflicts do not have to occur. To protect the future of motorcycle sport, make sure that you use your motorcycle legally, display environmental consciousness, and respect the rights of others.

## **Notes/warnings**

Pay close attention to the notes/warnings.

#### Info

Various information and warning labels are affixed to the vehicle. Do not remove information/warning labels. If they are missing, you or others may not recognize potential hazards and may therefore be injured.

## **Grades of risks**

#### **Danger**

Identifies a danger that will immediately and invariably lead to fatal or serious permanent injury if the appropriate measures are not taken.

#### **Warning**

Identifies a danger that is likely to lead to fatal or serious injury if the appropriate measures are not taken.

#### Note

Identifies a danger that will lead to considerable machine and material damage if the appropriate measures are not taken.

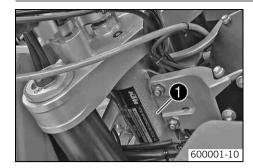

#### Warning

Identifies a danger that will lead to environmental damage if the appropriate measures are not taken.

#### **Owner's manual**

- It is important that you read this owner's manual carefully and completely before making your first trip. It contains useful information and tips to help you operate and handle your motorcycle. Only then will you find out how to customize the motorcycle ideally for your own use and how you can protect yourself from injury. The owner's manual also contains important information on servicing the motorcycle.
- The owner's manual is an important component of the motorcycle and should be handed over to the new owner if the vehicle is sold.

## **Chassis number**

Chassis number • is embossed in the steering head at the right.

## Type label

Type label **1** is fixed to the right of the steering head.

## **Key number**

The key number **1** is stamped on the key strap.

## **Engine number**

The engine number  $\ensuremath{\mathbf{0}}$  is stamped on the left side of the engine under the engine sprocket.

## **Fork part number**

The fork part number lacktriangle is stamped on the inner side of the fork stub.

## **Shock absorber part number**

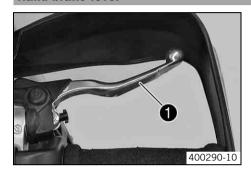

Shock absorber part number  $oldsymbol{0}$  is attached to the back of the shock absorber at the bottom.

## **Clutch lever**

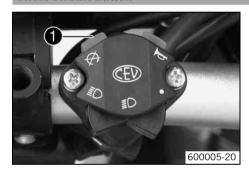

The clutch lever **①** is fitted on the left side of the handlebar. The clutch is hydraulically operated and self-adjusting.

## **Hand brake lever**

The hand brake lever **1** is fitted on the right side of the handlebar. The front brake is engaged using the hand brake lever.

## **Short circuit button**

The short circuit button • is fitted on the left side of the handlebar and has no function upon delivery.

## **Ignition switch**

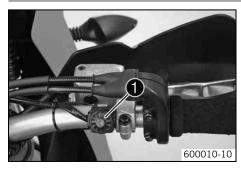

The ignition switch **1** is located to the left of the indicator lamp on the instrument support.

## **Possible states**

- Ignition off Ignition switch flipped up. In this position, the ignition circuit is interrupted, a running engine stops, and a non-running engine will not start.
- Ignition on Ignition switch flipped down. In this position, the ignition circuit is closed, and the engine can be started.

## **Electric starter button**

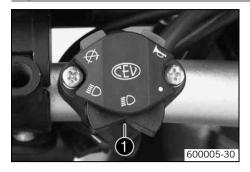

The electric starter button **①** is fitted on the right side of the handlebar.

## **Possible states**

- Electric starter button (3) in basic position.
- Electric starter button ③ pressed In this position, the electric starter is actuated.

## **Light switch**

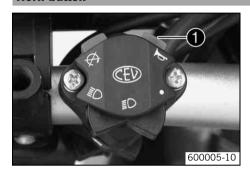

The light switch **1** is fitted on the left side of the handlebar.

#### Possible states

•	Light off — Light switch is turned to the right. In this position, the light is switched off.
<b>≣</b> D	Low beam on – Light switch is in the central position. In this position, the low beam and tail light are switched on.
<b>≣</b> O	High beam on – Light switch is turned to the left. In this position, the high beam and the tail light are switched on.

## **Horn button**

The horn button • is fitted on the left side of the handlebar.

#### Possible states

- Horn button 

  in neutral position.
- Horn button ₩ pressed The horn is operated in this position.

## **Turn signal switch**

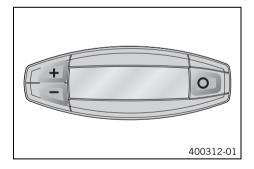

The turn signal switch **1** is fitted on the left side of the handlebar.

#### Possible states

	Turn signal off – Turn signal switch is in the central position.
<b>+</b>	Turn signal light, left, on – Turn signal switch turned to the left.
-	Turn signal, right, on – Turn signal switch turned to the right.

## **Speedometer**

- Press the key 

  ☐ to change the display mode or change to one of the Setup menus.

## Info

When the vehicle is delivered, only the **SPEED/H** and **SPEED/ODO** display modes are activated.

## **Speedometer activation and test**

Activating the speedometer:

The speedometer is activated when one of the keys is pressed or a signal is received from the wheel speed sensor.

Display test

For the function test of the display, all display segments light up briefly.

**WS** (wheel size)

After the display function test, the wheel size **WS** is displayed briefly.

#### Info

2205 mm corresponds to the size of the 21" front wheel with a series production tire.

The display then changes to the last selected mode.

400314-01

## **Tripmaster switch**

## (Option: Tripmaster switch)

You can use the trip master switch to control the functions of the speedometer from the handlebar.

#### Info

The trip master is an optional accessory.

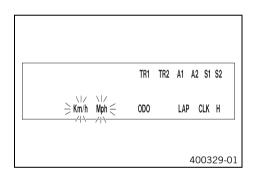

## **Setting kilometers or miles**

#### Info

If you change the unit, the value **ODO** is retained and converted accordingly.

The values TR1, TR2, A1, A2 and S1 are cleared when the unit of measure is changed.

#### Condition

The motorcycle is standing.

- Press the button briefly and repeatedly until appears at the bottom right of the display.
- Press the button 
   of for 3 5 seconds.
  - ✓ The Setup menu opens and the active functions are displayed.
- Press the button or repeatedly until the Km/h/Mph display flashes.

#### Km/h adjusting

Press the button ±.

## Mph adjusting

- Press the button ■.
- Press the button O for 3 5 seconds.
  - ✓ The settings are saved and the Setup menu closed.

## Info

If no button is pressed for 20 seconds, or if no impulse comes from the wheel speed sensor, the settings are automatically saved and the Setup menu closed.

## **Setting the clock**

#### Condition

The motorcycle is standing.

- Press the button O briefly and repeatedly until CLK appears at the bottom right of the display.
- Press the button 
   □ for 3 5 seconds.
  - ✓ The hour display flashes.
- Set the hour display with the button  $\pm$  and/or button  $\equiv$ .
- Press the button 
   Driefly.
  - ✓ The next segment of the display flashes and can be set.

#### Info

The seconds can only be set to zero.

- Press the button O for 3 5 seconds.
  - ✓ The settings are saved and the Setup menu closed.

## Info

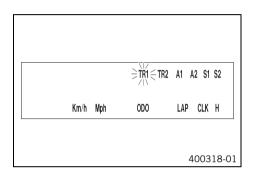

If no button is pressed for 20 seconds, or if no impulse comes from the wheel speed sensor, the settings are automatically saved and the Setup menu closed.

## **Adjusting the speedometer functions**

#### Info

When the vehicle is delivered, only the SPEED/H and SPEED/ODO display modes are activated.

#### Condition

The motorcycle is standing.

- Press the button O for 3 5 seconds.
  - ✓ The Setup menu is displayed and the activated functions are shown.
- - The selected function flashes.

#### **Activating a function**

- Press the button ±.
  - ✓ The symbol remains on the screen and the display changes to the next function.

#### **Deactivating the function**

- Press the button =.
  - The symbol on the screen goes out and the display changes to the next function.
- All desired functions are activated or deactivated accordingly.
- Press the button O for 3 5 seconds.
  - ✓ The settings are stored and the Setup menu is closed.

#### Info

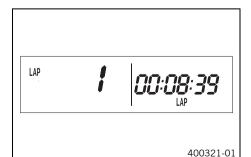

If no button is pressed for 20 seconds, or if a pulse arrives from the wheel speed sensor, the settings are stored automatically and the Setup menu is closed.

## Querying the lap time

#### Info

This function can be called only if lap times are measured.

#### **Condition**

The motorcycle is standing.

- Press the button briefly and repeatedly until LAP appears at the bottom right of the display.
- Press the button 
   Directly.
  - ✓ LAP 1 appears on the left side of the display.
- The button has no function
- Press the button O briefly.
  - Next display mode

#### Info

If an impulse is received from the wheel speed sensor, the left side of the display changes back to the **SPEED** mode.

## **Display mode SPEED (speed))**

400317-02

The time is displayed in The current speed is displayed in the **SPEED** display mode. The current speed can be displayed in **Km/h** or **Mph**.

#### Info

Make the country-specific settings.

When an impulse comes from the front wheel, the left side of the speedometer display changes to the **SPEED** mode and the current speed is shown.

## **Display mode SPEED/H (service hours)**

#### Condition

- The motorcycle is stationary
- Press the button O briefly and repeatedly until H appears at the bottom right of the display.

In display mode  $\mathbf{H}$ , the service hours of the engine are displayed.

The service hour counter stores the total traveling time.

#### Info

The service hour counter is necessary for ensuring that maintenance work is carried out at the right intervals.

If the speedometer is in  ${\bf H}$  display mode at the start of the journey, it automatically changes to the  ${\bf ODO}$  display mode.

The **H** display mode is suppressed during the journey.

Press the button ±.	No function
Press the button ■.	No function
Press the button of for 3 - 5 seconds.	The display changes to the Setup menu of the speedometer functions.
Press the button O briefly.	Next display mode

#### Display mode SPEED/CLK (clock)

 Press the button opiniefly and repeatedly until CLK appears at the bottom right of the display.

The time is displayed in **CLK** display mode.

Press the button ±.	No function
Press the button =.	No function
Press the button of for 3 - 5 seconds.	The display changes to the Setup menu of the clock.
Press the button O briefly.	Next display mode

## Display mode SPEED/LAP (lap time)

 Press the button 
 opriefly and repeatedly until LAP appears at the bottom right of the display.

In the **LAP** display mode, up to 10 lap times can be timed with the stop watch.

#### Info

If the lap time continues after you press the button  $\blacksquare$ , 9 memory locations are already occupied.

Lap 10 must be timed with the button #.

Press the button ±.	Starts or stops the clock.
Press the button =.	Stops the current lap time and saves it, and the stop watch starts the next lap.

CONTROLS \_\_\_\_\_\_\_

Press the button of for 3 - 5 seconds.	The stop watch and the lap time are reset.
Press the button obriefly.	Next display mode

## **Display mode SPEED/ODO (odometer)**

Press the button briefly and repeatedly until appears at the bottom right of the display.

In **QDO** display mode, the total number of kilometers ridden is displayed.

Press the button ±.	No function
Press the button $\blacksquare$ .	No function
Press the button of for 3 - 5 seconds.	_
Press the button O briefly.	Next display mode

## Display mode SPEED/TR1 (trip master 1)

 Press the button D briefly and repeatedly until TR1 appears at the top right of the display.

**TR1** (trip master 1) runs constantly and counts to 999.9.

You can use it to measure trips or the distance between refueling stops.

**TR1** is coupled with **A1** (average speed 1) and **S1** (stop watch 1).

#### Info

If 999.9 is exceeded, the values of  $\mathbf{TR1}$ ,  $\mathbf{A1}$  and  $\mathbf{S1}$  are automatically reset to 0.0.

Press the button $\pm$ .	No function
Press the button =.	No function
Press the button of for 3 - 5 seconds.	The TR1, A1 and S1 displays are reset to 0.0.
Press the button O briefly.	Next display mode

## **Display mode SPEED/TR2 (trip master 2)**

 Press the button D briefly and repeatedly until TR2 appears at the top right of the display.

**TR2** (trip master 2) runs constantly and counts up to 999.9.

The displayed value can be set manually with the button  $\blacksquare$  and the button  $\blacksquare$ . A very practical function for rides by the road book.

## Info

The **TR2** value can also be corrected manually during the journey with the button  $\blacksquare$  and the button  $\blacksquare$ .

If 999.9 is exceeded, the value of **TR2** is automatically reset to 0.0.

Press the button ±.	Increases value of TR2.
Press the button =.	Reduces value of TR2.
Press the button of for 3 - 5 seconds.	Deletes value of <b>TR2</b> .
Press the button O briefly.	Next display mode

## Display mode SPEED/A1 (average speed 1)

**A1** (average speed 1) shows the average speed calculated on the basis of **TR1** (trip master 1) and **\$1** (stop watch 1).

The calculation of this value is activated by the first impulse of the wheel speed sensor and ends 3 seconds after the last impulse.

Press the button ±.	No function
Press the button $\blacksquare$ .	No function
Press the button of for 3 - 5 seconds.	The TR1, A1 and S1 displays are reset to 0.0.
Press the button obriefly.	Next display mode

## Display mode SPEED/A2 (average speed 2)

400325-01

**A2** (average speed 2) shows the average speed on the basis of the current speed if the stop watch **S2** (stop watch 2) is running.

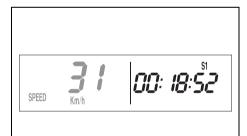

#### Info

The displayed value can differ from the actual average speed if **\$2** was not timed after the ride.

Press the button ±.	No function
Press the button =.	No function
Press the button of for 3 - 5 seconds.	_
Press the button O briefly.	Next display mode

## Display mode SPEED/S1 (stop watch 1)

Press the button briefly and repeatedly until \$1 appears at the top right of the display.

**\$1** (stop watch 1) displays the journey time on the basis of **TR1** and continues when an impulse is received from the wheel speed sensor.

The calculation of this value starts with the first impulse of the wheel speed sensor and ends 3 seconds after the last impulse.

	Press the button $\pm$ .	No function
	Press the button $\blacksquare$ .	No function
	Press the button of for 3 - 5 seconds.	Displays of TR1, A1 and S1 are reset to 0.0.
Press the button O N briefly.		Next display mode

#### Display mode SPEED/S2 (stop watch 2)

400327-01

- **\$2** (stop watch 2) is a manual stop watch.

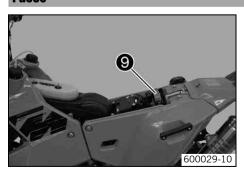

If **\$2** is running in the background, the **\$2** display flashes in the speedometer display.

Press the button $\pm$ .	Starts or stops <b>\$2</b> .	
Press the button $\blacksquare$ .	No function	
Press the button of for 3 - 5 seconds.	Displays of <b>\$2</b> and <b>A2</b> are reset to 0.0.	
Press the button O briefly.	Next display mode	

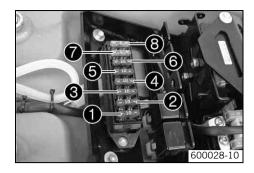

Table of functions				
Display	Press the button ±.	Press the button —.	Press the button © for 3 - 5 seconds.	Press the button O briefly.

## Fuses

The fuse box  $\ensuremath{\mathbf{9}}$  is located under the seat.

Fuse **1** - Electric starter system

Fuse 2 - Radiator fan

Fuse **3** - Lighting **Sentinel** (optional)

Fuse 4 - Roadbook

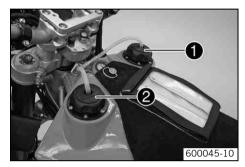

Fuse **6** - Not assigned

Fuse 6 - Lighting

Fuse **7** - **GPS** (optional)

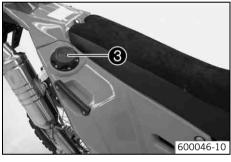

Fuse 3 - Iritrac (optional)

## **Fuel tank**

This model has three separate fuel tanks controlled by a fuel tap. Two fuel tanks are located in front of the seat and one fuel tank is located beneath the seat.

The right fuel tank is filled via filler cap **1** and the left fuel tank is filled via filler cap **2**.

The rear fuel tank is filled via filler cap 3.

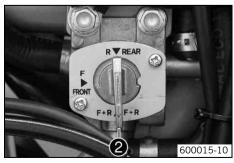

## **Fuel tap**

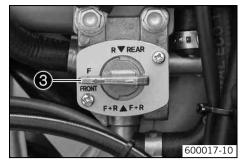

Fuel tap • is located on the right over the fork pivot.

The fuel tap can be used to control the individual fuel tanks. The fuel tap does not have an **OFF** position since the fuel pump does not let fuel pass when the engine is stopped.

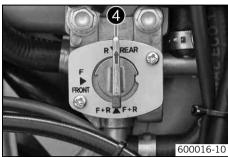

## **Possible states**

• **F+R** – If tap handle ② of the fuel tap points down, fuel is taken from all three fuel tanks. All fuel tanks empty out completely.

• **F FRONT** – If tap handle **3** of the fuel tap points toward the rear, fuel is taken from the two front fuel tanks. Only the front fuel tanks empty out completely.

• **R REAR** – If tap handle **4** of the fuel tap points up, fuel is taken from the rear fuel tank. Only the rear fuel tank empties out completely.

## Choke

The choke knob • is fitted on the left side of the frame.

Activating the choke function frees an opening through which the engine can draw extra fuel. This gives a richer fuel-air mixture, which is needed for a cold start.

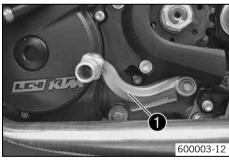

#### Info

If the engine is warm, the choke function must be deactivated.

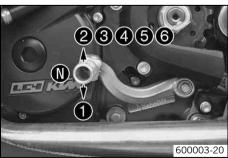

## **Possible states**

- Choke function activated The choke knob has been pulled out slightly and turned.
- Choke function deactivated The choke knob is engaged in the guide.

## **Shift lever**

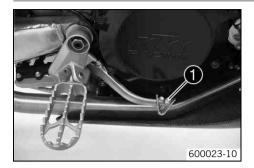

The shift lever **1** is mounted on the left side of the engine.

The gear positions can be seen in the photograph.

The neutral or idle position is between the first and second gears.

## Foot brake lever

Foot brake lever **1** is located in front of the right footrest. The rear brake is engaged with the foot brake lever.

## Side stand

#### Note

**Danger of damage** The parked vehicle may roll away or fall over.

Always place the vehicle on a firm and even surface.

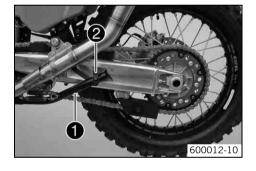

#### Note

Material damage Damage and destruction of components by excessive load.

The side stand is designed for the weight of the motorcycle only. Do not sit on the motorcycle when it is supported by the side stand only. The side stand and/or the frame could be damaged and the motorcycle could fall over.

To park the motorcycle, remove the rubber band ②, fold down the side stand ① with your foot and rest the motorcycle against it.

When you are riding, the side stand  $\bullet$  must be folded up and secured with the rubber band ②.

## **Steering lock**

The steering lock • is fitted on the left of the steering head.

The steering lock is used to lock the steering. Steering, and therefore riding, is no longer possible.

## **Locking the steering**

#### Note

Danger of damage The parked vehicle may roll away or fall over.

- Always place the vehicle on a firm and even surface.

- Park the motorcycle.
- Turn the handlebar as far as possible to the right.
- Insert the key in the steering lock, turn it to the left, press it in and turn it to the right. Remove the key.
  - ✓ Steering is no longer possible.

#### Info

Never leave the key in the steering lock.

## **Unlocking the steering**

 Insert the key in the steering lock, turn it to the left, pull it out and turn it to the right. Remove the key.

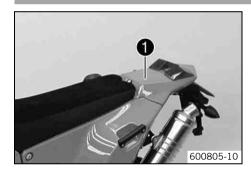

#### Info

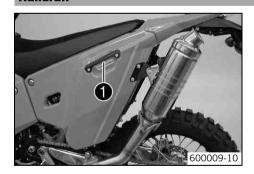

Never leave the key in the steering lock.

## **Tool set**

The tool set is contained in the accessories box and can be stored in compartment **①** beneath the additional lamps.

## Handrail

There is one handrail • attached at the left and one at the right (at the rear tank). The handrail is used for maneuvering the motorcycle.

#### **Advice on first use**

## Danger

**Danger of accidents** Danger arising from the rider's judgement being impaired.

Do not use the vehicle if you are inexperienced or if you have consumed alcohol or drugs.

#### **Warning**

**Risk of injury** Missing or poor protective clothing present an increased safety risk.

Wear protective clothing (helmet, boots, gloves, pants and jacket with protectors) every time you ride the vehicle. Always
wear protective clothing, which must be undamaged and meet legal requirements.

#### Warning

Danger of crashing Poor vehicle handling due to different tire tread patterns on front and rear wheels.

- The front and rear wheels must be fitted with tires with similar tread patterns to prevent loss of control over the vehicle.

#### Warning

**Danger of accidents** Critical riding behavior due to inappropriate riding.

Adapt your riding speed to the road conditions and your riding ability.

#### Varning

**Danger of accidents** Accident risk caused by presence of a passenger.

Your vehicle is not designed to carry passengers. Do not ride with a passenger.

## **Warning**

**Danger of accidents** Failure of brake system.

If the foot brake lever is not released, the brake linings drag permanently. The rear brake can fail due to overheating. Take
your foot off the foot brake lever if you do not want to brake.

#### Warning

**Danger of accidents** Unstable riding behavior.

Do not exceed the maximum permissible weight and axle loads.

#### Warning

**Risk of misappropriation** Usage by unauthorized persons.

Never leave the vehicle while the engine is running. Secure the vehicle against use by unauthorized persons.

#### Info

When using your motorcycle, remember that others may feel disturbed by excessive noise.

- Make sure that the pre-delivery inspection work has been carried out by an authorized KTM workshop.

You receive a delivery certificate and the service record at vehicle handover.

- Before your first trip, read the entire operating instructions carefully.
- Get to know the controls.
- Adjust the basic setting of the clutch lever. (\*\* p. 41)
- Adjust the free travel of the hand brake lever. ( p. 42)
- Adjust the free travel of the foot brake lever. ⁴ ( p. 46)
- Get used to handling the motorcycle on a suitable piece of land before making a longer trip.

#### nfo

Offroad, you should be accompanied by another person on another machine so that you can help each other.

- Try also to ride as slowly as possible and in a standing position to get a better feeling for the vehicle.
- Do not make any offroad trips that over-stress your ability and experience.
- Hold the handlebar firmly with both hands and keep your feet on the footrests when riding.
- If you carry any baggage, make sure it is fixed firmly as close as possible to the center of the vehicle and ensure even weight distribution between the front and rear wheels.

#### Info

Motorcycles react sensitively to any changes of weight distribution.

Do not exceed the overall maximum permitted weight and the axle loads.
 Guideline

Maximum permissible overall weight	400 kg (882 lb.)
Maximum permissible front axle load	190 kg (419 lb.)
Maximum permissible rear axle load	250 kg (551 lb.)

Check the spoke tension. (\* p. 54)

#### Info

The spoke tension must be checked after the vehicle has been operated for half an hour.

- Run the engine in.

## **Running in the engine**

During the run-in phase, do not exceed the specified speed in the respective gear.
 Guideline

Run-in time	2 h
1st gear	45 km/h (28 mph)
2nd gear	60 km/h (37.3 mph)
3rd gear	80 km/h (49.7 mph)
4th gear	95 km/h (59 mph)
5th gear	105 km/h (65.2 mph)
6th gear	110 km/h (68.4 mph)

## **Checks before putting into operation**

#### Info

Make sure that the motorcycle is in a perfect technical condition before use.

#### Info

In the interests of riding safety, make a habit of making a general check before you ride.

- Check the engine oil level. (\* p. 66)
- Check the chain tension. (\* p. 40)
- Check the chain dirt accumulation. ( ♥ p. 39)
- Check the tire condition. (\* p. 53)
- Check the tire air pressure. (\* p. 53)
- Check the front brake fluid level. (\* p. 43)
- Check the rear brake fluid level. (\* p. 47)
- Check the front brake linings. (\* p. 44)
- Check the rear brake linings. (\* p. 48)
- Check brake system function.
- Check the coolant level. (\* p. 62)
- Check that all controls are correctly adjusted and free to move.
- Check the functioning of the electrical equipment.

## **Starting**

#### **Danger**

**Danger of poisoning** Exhaust gases are poisonous and inhaling them may result in unconsciousness and/or death.

 When running the engine, always make sure there is sufficient ventilation, and do not start or run the engine in an enclosed space without an effective exhaust extraction system.

#### **Note**

Engine failure High engine speeds in cold engines have a negative effect on the service life of the engine.

- Always warm up the engine at low engine speeds.

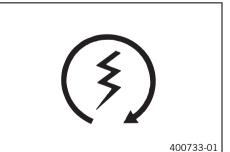

#### Info

If the motorcycle is unwilling to start, the cause can be old fuel in the float chamber. The flammable elements of the fuel evaporate after a long time of standing.

If the float chamber is filled with fresh fuel, the engine starts immediately.

Press the starter for a maximum of 5 seconds. Wait for a least 5 seconds before trying again.

#### Condition

Motorcycle was not operated: ≥ 1 week

- Empty the carburetor float chamber.
- Remove the motorcycle from the stand.
- Shift gear to neutral.
- Flip the ignition switch down.

#### Condition

Engine is cold

- Pull the choke knob out slightly and turn it.
- Press the electric starter button.

#### Info

Do not open the throttle.

## Starting up

## Info

Switch on the light before riding the motorcycle. You will then be seen earlier by other motorists. When you are riding, the side stand must be folded up and secured with the rubber band.

- Pull the clutch lever, engage 1st gear, release the clutch lever slowly and simultaneously open the throttle carefully.

## Shifting, riding

#### Warning

Danger of accidents If you change down at high engine speed, the rear wheel can lock up.

Do not change into a low gear at high engine speed. The engine races and the rear wheel can lock up.

#### Info

First gear is used for starting off or for steep inclines.

If you hear unusual noises while riding, stop immediately, switch off the engine and contact an authorized KTM workshop.

- When conditions allow (incline, road situation, etc.), you can shift into a higher gear. To do so, release the throttle while simultaneously pulling the clutch lever, shift into the next gear, release the clutch and open the throttle.
- If the choke function was activated, deactivate it after the engine has warmed up.
- After reaching maximum speed by fully opening the throttle grip, turn the throttle back so it is ¾ open. This will barely reduce the speed but fuel consumption will be considerably lower.
- Always open the throttle only as much as the engine can handle abrupt throttle opening increases fuel consumption.
- To shift down, brake if necessary and close the throttle at the same time.
- Pull the clutch lever and shift into a lower gear, release the clutch lever slowly and open the throttle or shift again.
- Switch off the engine if you expect to be standing for a long time.

Guideline

≥ 2 min

- Avoid frequent and longer slipping of the clutch. This heats the engine oil, the engine and the cooling system.
- Ride with a lower engine speed instead of with a high engine speed and a slipping clutch.

## **Braking**

#### Warning

**Danger of accidents** If you brake too hard, the wheels can lock.

Adapt your braking to the traffic situation and the road conditions.

#### Warning

**Danger of accidents** Reduced braking efficiency caused by spongy pressure point of front or rear brake.

- Check the brake system and do not continue riding. (Your authorized KTM workshop will be glad to help.)

## **Warning**

**Danger of accidents** Reduced braking efficiency due to wet or dirty brakes.

- Clean or dry dirty or wet brakes by riding and braking gently.
- On sandy, wet or slippery surfaces, use the rear brake.
- Braking should always be completed before you go into a bend. Change down to a lower gear appropriate to your road speed.
- On long downhill stretches, use the braking effect of the engine. Change down one or two gears, but do not overstress the engine.
   In this way, you have to brake far less and the brakes do not overheat.

## Stopping, parking

### Warning

**Risk of misappropriation** Usage by unauthorized persons.

Never leave the vehicle while the engine is running. Secure the vehicle against use by unauthorized persons.

#### Warning

**Danger of burns** Some vehicle components get very hot when the vehicle is in use.

Do not touch hot components such as exhaust system, radiator, engine, shock absorber and brakes. Allow these components to cool down before starting work on them.

#### Note

Danger of damage The parked vehicle may roll away or fall over.

- Always place the vehicle on a firm and even surface.

#### Note

Fire hazard Some vehicle components become very hot when the vehicle is operated.

 Do not park the vehicle near flammable or explosive substances. Do not place objects on the vehicle while it is still warm from being run. Always let the vehicle cool first.

#### **Note**

**Material damage** Damage and destruction of components by excessive load.

- The side stand is designed for the weight of the motorcycle only. Do not sit on the motorcycle when it is supported by the side stand only. The side stand and/or the frame could be damaged and the motorcycle could fall over.
- Apply the brakes and shift into neutral.
- With the engine idling, flip the ignition switch up until the engine stops.
- Park the motorcycle on a firm surface.

## Refueling

## **Danger**

**Fire hazard** Fuel is highly flammable.

- Never refuel the vehicle near open flames or burning cigarettes, and always switch off the engine first. Be careful that no fuel is spilt, especially on hot vehicle components. Clean up spilt fuel immediately.
- Fuel in the fuel tank expands when warm and can escape if the tank is overfilled. See the notes on refueling.

## **Warning**

**Danger of poisoning** Fuel is poisonous and a health hazard.

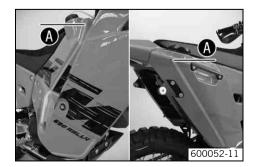

Avoid contact of the fuel with skin, eyes and clothing. Do not inhale fuel vapors. If fuel gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If fuel is swallowed, contact a doctor immediately. Change clothing that has come into contact with fuel.

#### **Warning**

**Environmental hazard** Improper handling of fuel is a danger to the environment.

Do not allow fuel to get into the ground water, the ground, or the sewage system.

- Switch off engine.
- Unscrew the filler cap.
- Fill the fuel tank with fuel no higher than mark  $oldsymbol{\Theta}$ .

Fuel tank capacity		
Fuel tank half,   9.0 l   (2.38 US gal)   approx.		Super unleaded (ROZ 95 / RON 95 / PON 91) ( p. 95)
Fuel tank half, front right, approx.	9.0 l (2.38 US gal)	Super unleaded (ROZ 95 / RON 95 / PON 91) ( p. 95)
Rear fuel tank, approx.	18.0 l (4.76 US gal)	Super unleaded (ROZ 95 / RON 95 / PON 91) (

Total fuel capacity,	36.0 l (9.51 US gal)	Super unleaded (ROZ 95 / RON 95 / PON 91) (* p. 95)
approx.		

- Replace the filler cap and turn clockwise until the tank is tightly closed.

## Info

Run the fuel tank breather hoses without kinks.

SERVICE PLAN

## Important maintenance work to be carried out by an authorized KTM workshop.

		KO5N	K15A	K45A	T1A
Engine	Change the engine oil and filter, clean the oil screens. 🌂 (* p. 66)	•	•	•

**NB1A:** Depending on conditions of use according to requirements.

## Jacking up the motorcycle

#### Note

**Danger of damage** The parked vehicle may roll away or fall over.

- Always place the vehicle on a firm and even surface.
- Jack up the motorcycle at the motor protection device near the link fork. The wheels must no longer touch the ground.

Work stand (54829055000)

Secure the motorcycle against falling over.

## Removing the motorcycle from the work stand

#### Note

Danger of damage The parked vehicle may roll away or fall over.

- Always place the vehicle on a firm and even surface.
- Remove the motorcycle from the work stand.
- Remove the work stand.

## Checking the basic chassis setting with the rider's weight

#### lnf∩

When adjusting the basic chassis setting, first adjust the shock absorber and then the fork.

- For optimal motorcycle riding characteristics and to avoid damage to forks, shock absorbers, swingarm and frame, the basic settings of the suspension components must match your body weight.
- As delivered, KTM offroad motorcycles are adjusted for a standard rider weight (with full protective clothing).
   Guideline

Standard rider weight

75... 85 kg (165... 187 lb.)

- If your weight is above or below the standard range, you have to adjust the basic setting of the suspension components accordingly.
- Small weight differences can be compensated by adjusting the spring preload, but in the case of large weight differences, the springs must be replaced.

## **Compression damping of shock absorber**

The compression damping can be adjusted via opening • on the left side of the rear tank.

The shock absorber can regulate compression damping separately in the low-speed and high-speed ranges (Dual Compression Control).

The terms low-speed and high-speed refers to the movement of the shock absorber during compression and not to the riding speed of the motorcycle.

Changes in the settings in the low-speed range have an impact on the high-speed range and vice versa.

#### Adjusting the compression damping of the shock absorber

#### Dange

**Danger of accidents** Disassembly of pressurized parts can lead to injury.

The shock absorber is filled with high density nitrogen. Adhere to the description provided. (Your authorized KTM workshop will be glad to help.)

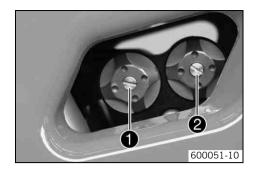

#### Info

The compression damping is differentiated into a low speed and high speed setting.

The low-speed setting can be seen during the slow to normal compression of the shock absorber.

The high-speed setting can be seen during the fast compression of the shock absorber.

- Turn the adjusting screw of the low-speed damping and the high-speed damping clockwise to the last perceptible click.
- Turn back counterclockwise by the number of clicks or turns corresponding to the shock absorber type.

#### Guideline

Compression damping, low-speed		
Standard 15 clicks		
Compression damping, high-speed		
Standard	20 turns	

#### Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

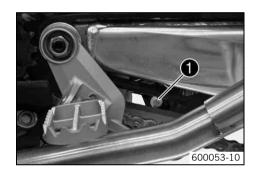

## Adjusting rebound damping of the shock absorber

#### **Danger**

**Danger of accidents** Disassembly of pressurized parts can lead to injury.

- The shock absorber is filled with high density nitrogen. Adhere to the description provided. (Your authorized KTM workshop will be glad to help.)

- Turn the adjusting screw 1 clockwise up to the last perceptible click.
- Turn back counterclockwise the number of clicks corresponding to the shock absorber type.

#### Guideline

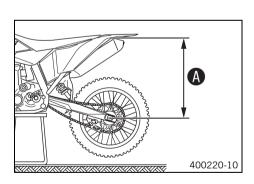

Rebound damping	
Standard	20 clicks

#### Info

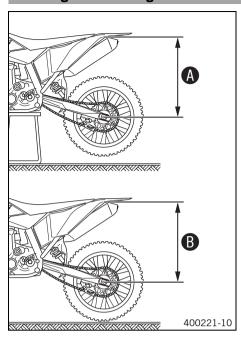

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

## Measuring the unloaded rear wheel sag

- Jack up the motorcycle. (\* p. 29)
- Measure the distance as vertically as possible between the rear axle and a fixed point, for example, a mark on the side cover.
- Make a note of the value as measurement **A**.
- Remove the motorcycle from the work stand. (\* p. 29)

## Checking the static sag of the shock absorber

- Measure distance of rear wheel unloaded. (\* p. 30)
- Ask someone to help you by holding the motorcycle upright.
- Measure the distance between the rear axle and the fixed point again.
- Make a note of the value as measurement **B**.

## i

#### Info

The static sag is the difference between measurements  $oldsymbol{0}$  and  $oldsymbol{0}$ .

Check the static sag.

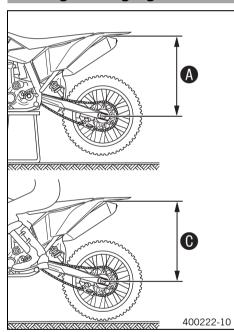

Static sag

33 mm (1.3 in)

- » If the static sag is less or more than the specified value:
  - Adjust the spring preload of the shock absorber.

     ( p. 31)

## Checking the riding sag of the shock absorber

- Measure distance ♠ of rear wheel unloaded. (▼ p. 30)
- With another person holding the motorcycle, the rider, wearing full protective clothing, sits on the seat in a normal sitting position (feet on footrests) and bounces up and down a few times until the rear suspension levels out.
- The other person now measures the distance between the rear axle and a fixed point.
- Make a note of the value as measurement •.

#### Info

The riding sag is the difference between measurements  $oldsymbol{\Theta}$  and  $oldsymbol{\Theta}$ .

Check the riding sag.

Riding sag

107 mm (4.21 in)

- » If the riding sag differs from the specified measurement:
  - Adjust the riding sag. ◀ (\* p. 32)

## Adjusting the spring preload of the shock absorber &

## **Danger**

**Danger of accidents** Disassembly of pressurized parts can lead to injury.

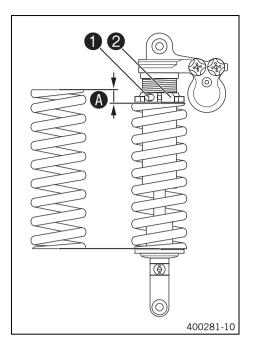

The shock absorber is filled with high density nitrogen. Adhere to the description provided. (Your authorized KTM workshop will be glad to help.)

#### Info

Before changing the spring preload, make a note of the present setting, e.g., by measuring the length of the spring.

- Remove shock absorber. (\* p. 32)
- After removing the shock absorber, clean it thoroughly.

- Loosen screw ①.
- Turn adjusting ring 2 until the spring is no longer under tension.

Combination wrench (50329080000)

Hook wrench (T106S)

- Measure the overall spring length when not under tension.
- Tighten the spring by turning adjusting ring 2 to measurement 4.
   Guideline

Spring preload	
Standard	14 mm

## Info

Depending on the static sag and/or the riding sag, it may be necessary to increase or decrease the spring preload.

- Tighten screw 1.

Guideline

Screw, shock absorber adjusting ring	M6	5 Nm (3.7 lbf ft)

Install the shock absorber. (\* p. 33)

## Adjusting the riding sag 🔧

- Remove shock absorber. (\* p. 32)
- After removing the shock absorber, clean it thoroughly.
- Choose and mount a suitable spring.

Guideline

Spring rate	
Weight of rider: 65 75 kg (143 165 lb.)	88 N/mm (502 lb/in)
Weight of rider: 75 85 kg (165 187 lb.)	92 N/mm (525 lb/in)
Weight of rider: 85 95 kg (187 209 lb.)	97 N/mm (554 lb/in)

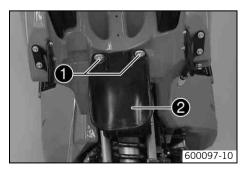

#### Info

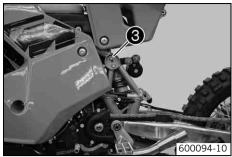

The spring rate is shown on the outside of the spring. Smaller weight differences can be compensated by changing the spring preload.

- Install the shock absorber. (\* p. 33)
- Check the static sag of the shock absorber. (\* p. 31)
- Check the riding sag of the shock absorber. (\* p. 31)
- Adjust the rebound damping of the shock absorber. (\* p. 30)

## **Removing the shock absorber**

- Jack up the motorcycle. (\* p. 29)
- Fold up the fuel tank at the rear. (\* p. 57)
- Remove screws 1 and splash protector 2.

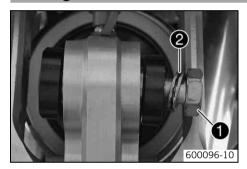

Remove screw 3.

- Remove screw 4.
- Remove shock absorber.

## Installing the shock absorber

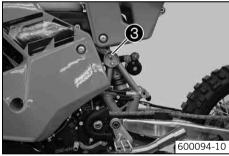

- Position the shock absorber.
- Mount the screw with the washers at the bottom of the shock absorber but do not tighten it yet.

## Info

Ensure that the washers 2 are properly positioned.

Mount and tighten screw 3.

## Guideline

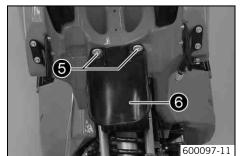

Screw, top shock absorber	M10	45 Nm (33.2 lbf ft)	Loctite® 243 <sup>TM</sup>
---------------------------	-----	------------------------	----------------------------

Tighten screw 4.

## Guideline

Screw, bottom shock	M10	45 Nm	Loctite® 243™
absorber		(33.2 lbf ft)	

Position the splash protector **3**. Mount and tighten screws **5**.
 Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)

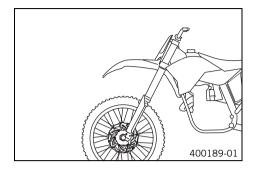

Remove the motorcycle from the work stand. (\* p. 29)

## **Checking basic setting of fork**

#### Info

For various reasons, no exact riding sag can be determined for the forks.

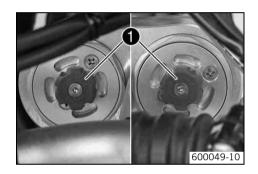

- As with the shock absorber, smaller weight differences can be compensated by the spring preload.
- However, if your fork is often overloaded (hard end stop on compression), you must fit harder springs to avoid damage to the fork and frame.

## Adjusting the compression damping of the fork

## Info

The hydraulic compression damping determines the fork suspension behavior.

Turn adjusting screws • clockwise until they stop.

#### Info

Adjusting screws **①** are located at the top end of the fork legs. Make the same adjustment on both fork legs.

Turn back counterclockwise by the number of clicks corresponding to the fork type.
 Guideline

Compression damping	
Standard	12 clicks

#### Info

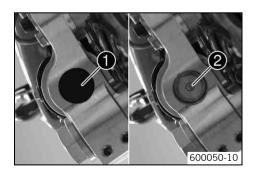

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

## Adjusting rebound damping of fork

#### Info

The hydraulic rebound damping determines the fork rebound behavior.

- Remove protection covers 1.
- Turn adjusting screws 2 clockwise until they stop.

#### Info

Adjusting screws ② are located at the bottom end of the fork legs. Make the same adjustment on both fork legs.

Turn back counterclockwise by the number of clicks corresponding to the fork type.

Guideline

Rebound damping	
Standard	20 clicks

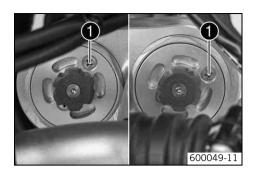

#### Info

Turn clockwise to increase damping; turn counterclockwise to reduce damping.

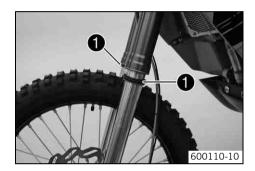

Mount protection covers ①.

# **Bleeding fork legs**

- Jack up the motorcycle. (\* p. 29)
- Remove bleeder screws briefly.
  - ✓ Any excess pressure escapes from the interior of the fork.
- Mount and tighten bleeder screws.
- Remove the motorcycle from the work stand. (\* p. 29)

# Cleaning dust boots of fork legs

- Dismount the front fender (\* p. 35)
- Push dust boots of both fork legs downwards.

### Info

The dust boots should remove dust and coarse dirt particles from the fork tubes. Over time, dirt can penetrate behind the dust boots. If this dirt is not removed, the oil seals behind can start to leak.

#### Warning

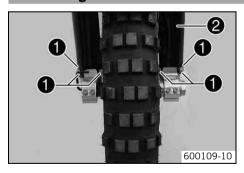

**Danger of accidents** Reduced braking efficiency due to oil or grease on the brake discs.

- Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.
- Clean and oil the dust boots and inner fork tube of both fork legs.

Universal oil spray (\* p. 96)

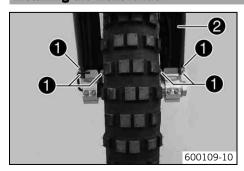

- Press the dust boots back into their normal position.
- Remove excess oil.
- Install front fender. (\* p. 35)

# **Dismounting the front fender**

Remove screws 1. Remove front fender 2.

# Installing the front fender

Position the front fender ②. Mount and tighten screws ①.
 Guideline

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
---------------------------	----	--------------------

# Checking the steering head bearing play

### Warning

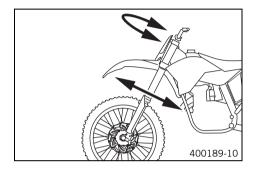

**Danger of accidents** Unstable vehicle handling from incorrect steering head bearing play.

- Adjust the steering head bearing play without delay. (Your authorized KTM workshop will be glad to help.)

#### Info

If the bike is ridden with play in the steering head bearing, the bearing and the bearing seats in the frame can become damaged with time.

- Jack up the motorcycle. (\* p. 29)
- Remove the steering damper.
- Move the handlebar to the straight-ahead position. Move the fork legs to and fro in the direction of travel.

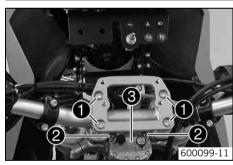

No play should be noticeable in the steering head bearing.

- » If there is noticeable play present:
  - Adjust the play of the steering head bearing. 4 (\* p. 36)
- Move the handlebar to and fro over the entire steering range.

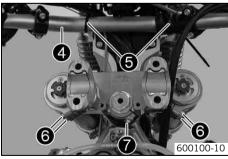

The handlebar must be able to move easily over the entire steering range. No resting locations should be noticeable.

- » If click positions are noticeable:
  - Adjust the play of the steering head bearing. 
     ♠ (▼ p. 36)
  - Check the steering head bearing and replace if required.
- Install the steering damper.
- Remove the motorcycle from the work stand. (\* p. 29)

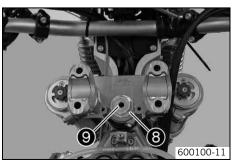

### Adjusting the play of the steering head bearing 4

- Remove screws **1**. Remove the holding plate with handlebar clamps.
- Remove screws 2. Remove the steering damper 3.
- Remove the trim. (♥ p. 54)

- Fix the handlebar 4 onto the instrument support with cable ties 6.
- Loosen screws 6 and 7.

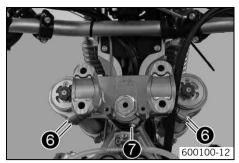

- Loosen the nut 8 and screw 9.
- Retighten the screw **9**.

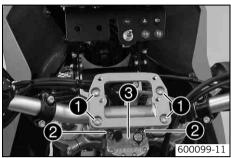

Guideline

Screw, top steering head M20x1.5 12 Nm (8.9 lbf ft)

Lock the screw 
 and nut 
 .

Lock nut, top steering head	M20x1.5	25 Nm (18.4 lbf ft)
-----------------------------	---------	------------------------

Tighten screw **7**.Guideline

Screw, top steering stem	M8	20 Nm
		(14.8 lbf ft)

Fully tighten screw 6.

Guideline

Screw, top triple clamp	M8	17 Nm
		(12.5 lbf ft)

Position the steering damper **3**. Mount and tighten screws **2**.
 Guideline

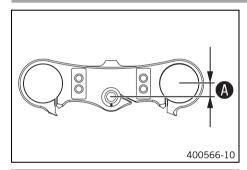

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)

- Open the cable binders and position the handlebar.
- Position the holding plate with handlebar clamps. Mount and tighten screws ①.
   Guideline

Screw, handlebar clamp	M8	16 Nm
·		(11.8 lbf ft)

Mount the trim. (\* p. 55)

# **Fork offset**

The fork offset **4** has an impact on the handling of the vehicle. It is calculated from the center of the fork leg to the center of the steering head bearing. The fork offset can optionally be adjusted.

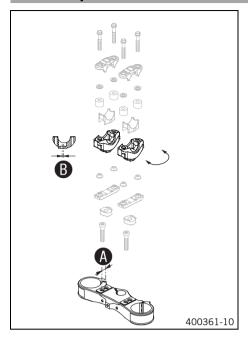

When mark 1 is visible in drill hole 1 (as delivered), you will achieve better handling in bends.

Fork offset	
Mark 1 visible	20 mm (0.79 in)

If mark  ${\bf 1}$  is not visible in drill hole  ${\bf 0}$ , you will achieve better riding stability on fast stretches.

Fork offset	
No mark	22 mm (0.87 in)

### **Handlebar** position

On the upper triple clamp, there are 2 holes at a distance of **1** to each other.

Distance 6 between holes 15 mm (0.59 in)

The holes on the handlebar support are placed at a distance of **3** from the center.

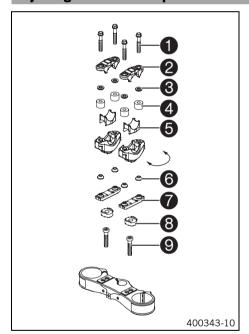

Distance **3** between holes 3.5 mm (0.138 in)

The handlebar can be mounted in 4 different positions. This enables you to mount the handlebar in the position most suitable for the rider.

The handlebar supports can also be mounted at 2 different heights (with and without spacer).

Thick spacer	9 mm (0.35 in)

# Adjusting the handlebar position 🔏

- Remove the four screws ①. Remove the holding plate with handlebar clamps ②
   with intermediate rubber pieces ③ and elastomers ④.
- Remove the handlebar and lay it to one side.

#### Info

Protect the motorcycle and its attachments from damage by covering them. Do not bend the cables and lines.

- Remove the lower shells 6.
- Remove the clamp bar with the rubber cones .
- Remove the two screws 9. Remove the handlebar support.
- Place the handlebar support in the required position. Mount and tighten the two screws 9.

Guideline

Screw, handlebar support	M10	40 Nm	Loctite® 243™
		(29.5 lbf ft)	

# Condition

Spacer 8 mounted:

Use a M10x35 screw

#### Condition

Without a spacer 8:

Use a M10x25 screw

### Info

Position the left and right handlebar supports evenly.

- Insert rubber cones 6 and clamp bar 7.
- Insert lower shells 6.
- Position the handlebar.

#### Info

Make sure cables and wiring are positioned correctly.

Position the holding plate with handlebar clamp ② with intermediate rubber pieces ③ and elastomers ④.

Elastomer kit green - soft quality (SXS05125203)

Elastomer kit yellow - medium quality (standard) (SXS05125204)

Elastomer kit red - hard quality (SXS05125205)

### Info

The elastomers are available in different versions.

- Mount and evenly tighten the four screws lacktriangle.

### Guideline

Screw, handlebar clamp	M8	16 Nm
		(11.8 lbf ft)

### Info

Make sure the gap width is even.

# Adjusting the throttle cable

- Remove the front fuel tank. (\* p. 56)
- Check the throttle cable routing.
- Move the handlebar to the straight-ahead position.
- To adjust, loosen lock nut ①, turn adjusting screw ② accordingly and retighten the lock nut.

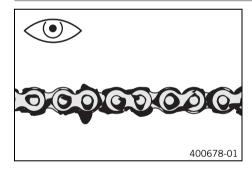

#### Info

Ensure that the throttle grip automatically returns to the idle position after it is released.

Install the fuel tank. (\* p. 56)

# **Checking chain dirt**

- Check the chain for coarse dirt accumulation.
  - If the chain is very dirty:
    - Clean the chain. (♥ p. 39)

# **Cleaning the chain**

# **Warning**

**Danger of accidents** Oil or grease on the tires reduces their grip.

- Remove oil and grease with a suitable cleaning material.

#### Warning

**Danger of accidents** Reduced braking efficiency due to oil or grease on the brake discs.

- Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.

### **Warning**

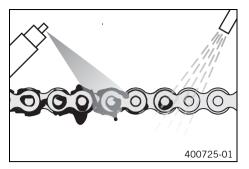

**Environmental hazard** Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

# Info

The service life of the chain depends largely on its maintenance.

- Clean the chain regularly and then treat with chain spray.

Chain cleaner (♥ p. 96)
Off-road chain spray (♥ p. 96)

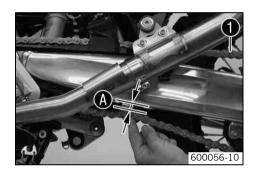

# **Checking the chain tension**

### Warning

**Danger of accidents** Danger caused by incorrect chain tension.

If the chain tension is too high, the components of the secondary power train (chain, engine sprocket, rear sprocket, bearings in transmission and rear wheel) are under additional load. Apart from premature wear, in extreme cases the chain can rupture or the countershaft of the transmission can break. On the other hand, if the chain is loose, it can fall off the engine sprocket or the rear sprocket and block the rear wheel or damage the engine. Check the chain tension and correct if necessary.

- Rest the motorcycle on its side stand on a horizontal surface.
- Make sure that the chain adjusters are mounted correctly on the adjusting screws.
- Push the chain at the end of the chain sliding piece up and determine the chain tension between the swingarm and the top edge of the chain.

### Info

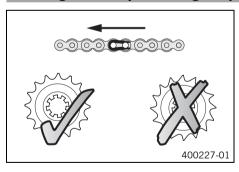

The upper chain section • must be taut.

Chain wear is not always even, so you should repeat this measurement at different chain positions.

Chain tension	
The chain tension is measured while the vehicle is resting on the side stand.	5 mm

- » If the chain tension does not meet specifications:
  - Adjust the chain tension. (\* p. 41)

# Checking the rear sprocket/engine sprocket for wear

- Check the rear sprocket/engine sprocket for wear.
  - If the rear sprocket/engine sprocket are worn:
    - Replace rear sprocket/engine sprocket.

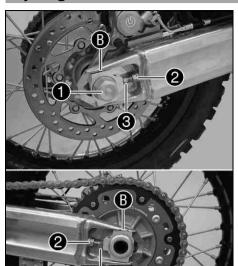

### Info

When mounting the chain joint, always make sure that the closed side of the joint faces forward (riding direction).

The engine sprocket, rear sprocket and chain should always be replaced together.

- Check the chain guides for firm seating and wear.

### **Adjusting chain tension**

- Rest the motorcycle on its side stand on a horizontal surface.
- Loosen nut ①.
- Loosen nuts 2.
- Adjust the chain tension by turning the left and right adjusting screws so that
  the markings on the left and right chain adjusters are in the same position relative
  to the reference marks . The rear wheel is then correctly aligned.

#### Guideline

Chain tension	
The chain tension is measured while the vehicle is resting on the side stand.	5 mm

- Tighten nuts ②.
- Make sure that the chain adjusters are fitted correctly on the adjusting screws 3.
- Tighten nut ①.

#### Guideline

Nut, rear wheel spindle	M25x1.5	90 Nm (66.4 lbf ft)

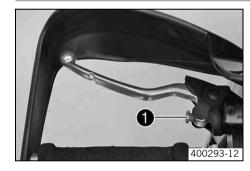

#### Info

The wide adjustment range of the chain adjusters (32 mm) enables different secondary transmissions with the same chain length.

The chain adjusters can be turned by 180°.

### Adjusting basic setting of clutch lever

 Adjust the basic setting of the clutch lever to your hand size by turning adjusting screw 1.

### Info

Turn the adjusting screw clockwise to increase the distance between the clutch lever and the handlebar.

Turn the adjusting screw counterclockwise to decrease the distance between the clutch lever and the handlebar.

The range of adjustment is limited.

Turn the adjusting screw by hand only, and do not apply any force.

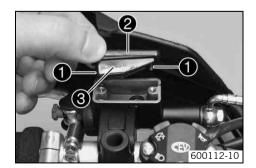

Do not make any adjustments while riding!

### Checking the fluid level of the hydraulic clutch

### Info

The fluid level rises with increasing wear of the clutch lining disc. Do not use brake fluid.

- Move the clutch fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws ①.
- Remove cover ② with membrane ③.
- Check the fluid level.

Fluid level under top level of container 4 mm (0.16 in)

- » If the coolant level does not meet specifications:
  - Correct the fluid level of the hydraulic clutch.

Hydraulic fluid (15) (\* p. 95)

- Position the cover with the membrane. Mount and tighten screws.

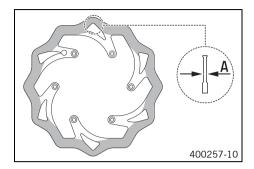

### **Checking brake discs**

### **Warning**

**Danger of accidents** Reduced braking efficiency due to worn brake disc(s).

Change the worn brake disc(s) without delay. (Your authorized KTM workshop will be glad to help.)

 Check the thickness of the front and rear brake discs in several places to ensure that it conforms to measurement .

#### Info

Wear reduces the thickness of the brake disc around the area used by the brake linings.

Brake discs - wear limit	
Front	4.5 mm (0.177 in)
Rear	3.5 mm (0.138 in)

- » If the brake disc thickness is less than the specified value.
  - Change brake disc.
- Check the front and rear brake discs for damage, cracks, and deformation.
  - » If damage, cracks, or deformation are visible on the brake disc:
    - Change brake disc.

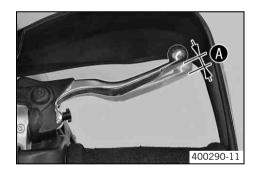

### Checking the free travel of the hand brake lever

#### Warning

**Danger of accidents** Brake system failure.

If there is no free travel on the hand brake lever, pressure builds up in the front brake circuit. The front brake can fail due
to overheating. Adjust free travel on hand brake lever according to specifications.

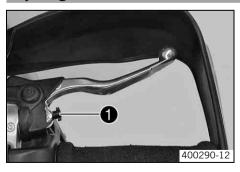

Pull the hand brake lever and check the free travel A.

Free travel of hand brake lever  $\geq 3 \text{ mm} (\geq 0.12 \text{ in})$ 

- » If the free travel does not meet specifications:
  - Adjust the free travel of the hand brake lever. ( p. 42)

# Adjusting free travel of hand brake lever

- Check the free travel of the hand brake lever. ( p. 42)
- Adjust the free travel of the hand brake lever with the adjustment screw •.

#### Info

Turn the adjustment screw clockwise to reduce free travel. The pressure point moves away from the handlebar.

Turn the adjustment screw counterclockwise to increase free travel. The pressure point moves towards the handlebar.

The range of adjustment is limited.

Turn the adjusting screw by hand only, and do not apply any force.

Do not make any adjustments while riding!

## Checking the front brake fluid level

### Warning

**Danger of accidents** Failure of the brake system.

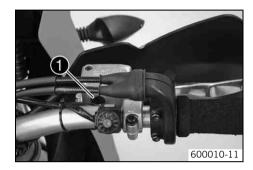

If the brake fluid level falls below the MIN mark, this indicates a leakage in the brake system or worn-out brake linings.
 Check the brake system and do not continue riding. (Your authorized KTM workshop will be glad to help.)

#### Warning

**Danger of accidents** Reduced braking effect caused by old brake fluid.

 Change the brake fluid of the front and rear brakes according to the service schedule. (Your authorized KTM workshop will be glad to help.)

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Check the brake fluid level in the viewer ①.
  - » If the brake fluid level is below the MIN mark:
    - Add front brake fluid. 🔌 (🕶 p. 43)

# Adding front brake fluid 🔌

### **Warning**

**Danger of accidents** Failure of the brake system.

- If the brake fluid level falls below the **MIN** mark, this indicates a leakage in the brake system or worn-out brake linings. Check the brake system and do not continue riding. (Your authorized KTM workshop will be glad to help.)

### Warning

**Skin irritation** Brake fluid can cause skin irritation on contact.

- Avoid contact with skin and eyes, and keep out of the reach of children.
- Wear suitable protective clothing and goggles.
- If brake fluid gets into your eyes, rinse thoroughly with water and contact a doctor immediately.

### **Warning**

**Danger of accidents** Reduced braking effect caused by old brake fluid.

 Change the brake fluid of the front and rear brakes according to the service schedule. (Your authorized KTM workshop will be glad to help.)

### Warning

**Environmental hazard** Hazardous substances cause environmental damage.

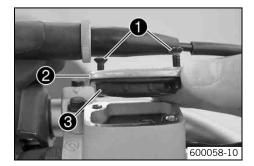

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

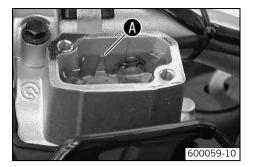

#### Info

Never use DOT 5 brake fluid! It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint! Use only clean brake fluid from a sealed container!

- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws ①.
- Remove cover ② with membrane ③.

Add brake fluid to level A.

Brake fluid DOT 4 / DOT 5.1 (\* p. 94)

Position the cover with the membrane. Mount and tighten screws.

### Info

Clean up overflowed or spilt brake fluid immediately with water.

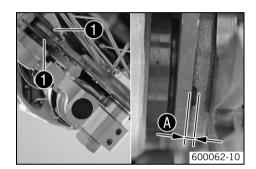

# **Checking the front brake linings**

### **Warning**

**Danger of accidents** Reduced braking efficiency caused by worn brake linings.

Change worn brake linings immediately. (Your authorized KTM workshop will be glad to help.)

Check the brake linings for minimum thickness **4**.

#### Info

The brake lining wear marks 1 must be clearly visible.

Minimum thickness

 $\geq 1 \text{ mm } (\geq 0.04 \text{ in})$ 

- » If the minimum thickness is less than specified:
  - Change the front brake linings. ⁴ ( p. 45)
- Check the brake linings for damage and cracking.
  - » If damage or tearing is visible:
    - Change the front brake linings. ⁴ (▼ p. 45)

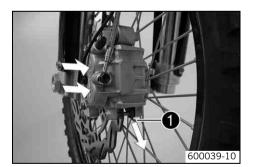

# Removing front brake linings 🔧

### **Warning**

**Danger of accident** Brake system failure.

- Maintenance work and repairs must be carried out professionally. (Your authorized KTM workshop will be glad to help.)

 Press the brake caliper onto the brake disc by hand in order to push back the brake pistons.

#### Info

Make sure when pushing back the brake pistons that you do not press the brake caliper against the spokes.

Remove the lock pin 1.

- Remove the bolt ② with a suitable tool and disassemble the brake linings ③.
- Remove screws 

   and take off brake caliper.
- Clean brake caliper and brake caliper support.

## Installing the front brake linings &

### Warning

**Danger of accidents** Reduced braking efficiency due to oil or grease on the brake discs.

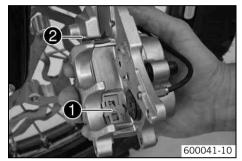

Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.

### Warning

**Danger of accidents** Reduced braking efficiency due to use of non-approved brake linings.

Brake linings available from accessory suppliers are often not tested and approved for use on KTM vehicles. The construction and friction factor of the brake linings and therefore the brake power can differ considerably from the original KTM brake linings. If brake linings are used that differ from the originals, there is no guarantee that they comply with the original license. The vehicle no longer corresponds to the condition at delivery, and the warranty is no longer valid.

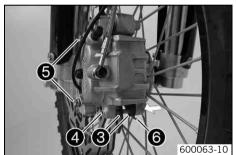

- Check the brake discs. (\* p. 42)
- Check that leaf spring 1 in the brake caliper and sliding plate 2 in the brake caliper support are seated correctly.

#### Info

The arrow on the leaf spring points in the rotation direction of the brake

- Position brake linings 3 and insert bolts 4 by hand.
- Position brake caliper, mount and tighten screws **6**.
   Guideline

Screw, front brake caliper	M8	30 Nm	Loctite® 243™
		(22.1 lbf ft)	

- Mount the bolt 4 with a suitable tool and insert the lock pin 6.
- Operate the hand brake lever repeatedly until the brake linings lie on the brake disc and there is a pressure point.

# Changing the front brake linings 4

#### Warning

**Skin irritation** Brake fluid can cause skin irritation on contact.

- Avoid contact with skin and eyes, and keep out of the reach of children.
- Wear suitable protective clothing and goggles.
- If brake fluid gets into your eyes, rinse thoroughly with water and contact a doctor immediately.

### **Warning**

**Danger of accidents** Reduced braking effect caused by old brake fluid.

 Change the brake fluid of the front and rear brakes according to the service schedule. (Your authorized KTM workshop will be glad to help.)

### **Warning**

**Environmental hazard** Hazardous substances cause environmental damage.

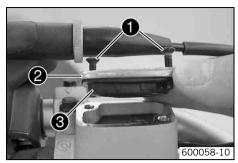

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

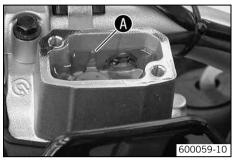

#### Info

Never use DOT 5 brake fluid! It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint! Use only clean brake fluid from a sealed container!

- Remove the front brake linings. ⁴ ( p. 44)
- Move the brake fluid reservoir mounted on the handlebar to a horizontal position.
- Remove screws ①.
- Remove cover **2** with membrane **3**.
- Press the brake piston back to its basic position and make sure that no brake fluid overflows from the brake fluid reservoir.
- Install the front brake linings. ⁴ (♥ p. 45)
- Add brake fluid to level A.

Brake fluid DOT 4 / DOT 5.1 (\* p. 94)

Position the cover with the membrane. Mount and tighten screws.

#### Info

Clean up overflowed or spilt brake fluid immediately with water.

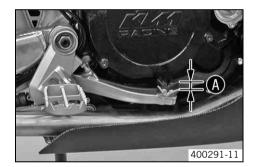

# **Checking free travel of foot brake lever**

### **Warning**

**Danger of accidents** Brake system failure.

If there is no free travel on the foot brake lever, pressure builds up on the rear brake circuit. The rear brake can fail due to
overheating. Adjust free travel on foot brake lever according to specifications.

 Move the foot brake lever back and forth between the end stop and the contact to the foot brake cylinder piston and check free travel .
 Guideline

Free play at foot brake lever 3... 5 mm (0.12... 0.2 in)

- » If the free travel does not meet specifications:
  - Adjust the free travel of the foot brake lever. 4 (\* p. 46)

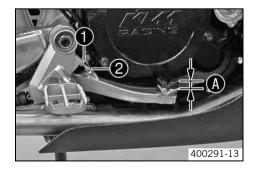

# Adjusting free travel of foot brake lever 🔏

# Warning

**Danger of accidents** Brake system failure.

If there is no free travel on the foot brake lever, pressure builds up on the rear brake circuit. The rear brake can fail due to
overheating. Adjust free travel on foot brake lever according to specifications.

Loosen the nut **1** and use the screw **2** to adjust the free travel **3**.
 Guideline

Free play at foot brake lever 3... 5 mm (0.12... 0.2 in)

Hold screw ② and tighten nut ①.

Guideline

Remaining nuts, chassis M6 10 Nm (7.4 lbf ft)

### **Checking rear brake fluid level**

### Warning

**Danger of accidents** Failure of the brake system.

If the brake fluid level falls below the MIN mark, this indicates a leakage in the brake system or worn-out brake linings.
 Check the brake system and do not continue riding. (Your authorized KTM workshop will be glad to help.)

#### Warning

**Danger of accidents** Reduced braking effect caused by old brake fluid.

 Change the brake fluid of the front and rear brakes according to the service schedule. (Your authorized KTM workshop will be glad to help.)

- Stand the vehicle upright.
- Check the brake fluid level in the brake fluid reservoir ①.
  - » When the fluid level reaches the **MIN** mark **①**:
    - Add rear brake fluid. 4 (\* p. 47)

# Adding rear brake fluid 🔧

### **Warning**

**Danger of accidents** Failure of the brake system.

If the brake fluid level falls below the MIN mark, this indicates a leakage in the brake system or worn-out brake linings.
 Check the brake system and do not continue riding. (Your authorized KTM workshop will be glad to help.)

### Warning

**Skin irritation** Brake fluid can cause skin irritation on contact.

- Avoid contact with skin and eyes, and keep out of the reach of children.
- Wear suitable protective clothing and goggles.
- If brake fluid gets into your eyes, rinse thoroughly with water and contact a doctor immediately.

# **Warning**

**Danger of accidents** Reduced braking effect caused by old brake fluid.

 Change the brake fluid of the front and rear brakes according to the service schedule. (Your authorized KTM workshop will be glad to help.)

### Warning

**Environmental hazard** Hazardous substances cause environmental damage.

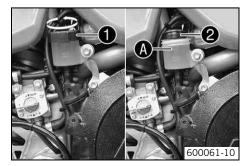

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

# Info

Never use DOT 5 brake fluid! It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint! Use only clean brake fluid from a sealed container!

- Stand the vehicle upright.
- Turn screw cap 1 in the direction of the arrow and remove it with membrane 2.
- Add brake fluid to level A.

Brake fluid DOT 4 / DOT 5.1 (\* p. 94)

Mount the screw cap with the membrane.

#### Info

Clean up overflowed or spilt brake fluid immediately with water.

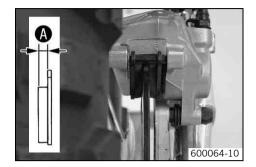

### **Checking the rear brake linings**

# **Warning**

**Danger of accidents** Reduced braking efficiency caused by worn brake linings.

Change worn brake linings immediately. (Your authorized KTM workshop will be glad to help.)

Check the brake linings for minimum thickness **a**.

Minimum thickness

≥ 1 mm (≥ 0.04 in)

- » If the minimum thickness is less than specified:
  - Change the rear brake linings. ⁴ ( p. 49)
- Check the brake linings for damage and cracking.
  - » If damage or cracking is visible:
    - Change the rear brake linings. ⁴ ( p. 49)

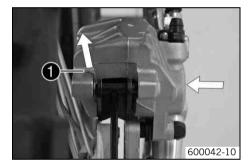

# Removing rear brake linings 🔏

#### Warning

**Danger of accident** Brake system failure.

Maintenance work and repairs must be carried out professionally. (Your authorized KTM workshop will be glad to help.)

 Press the brake caliper onto the brake disc by hand in order to push back the brake pistons.

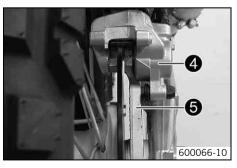

#### Info

Make sure when pushing back the brake piston that you do not press the brake caliper against the spokes.

Remove the lock pin 1.

Remove the bolt ② with a suitable tool and disassemble the brake linings ③.

- Clean brake caliper 4 and brake caliper support 5.

### Installing the rear brake linings 🔧

### Warning

**Danger of accidents** Reduced braking efficiency due to oil or grease on the brake discs.

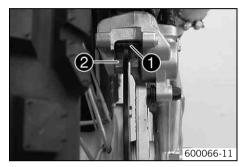

Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.

# Warning

**Danger of accidents** Reduced braking efficiency due to use of non-approved brake linings.

Brake linings available from accessory suppliers are often not tested and approved for use on KTM vehicles. The construction and friction factor of the brake linings and therefore the brake power can differ considerably from the original KTM brake linings. If brake linings are used that differ from the originals, there is no guarantee that they comply with the original license. The vehicle no longer corresponds to the condition at delivery, and the warranty is no longer valid.

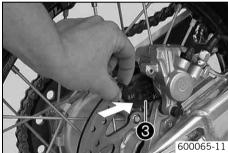

- Check the brake discs. (\* p. 42)
- Check that leaf spring 1 in the brake caliper and sliding plate 2 in the brake caliper support are seated correctly.

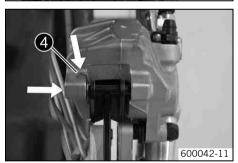

#### Info

The arrow on the leaf spring points in the rotation direction of the brake disc

Insert brake linings 3.

- Mount the bolt with a suitable tool and insert the lock pin 4.
- Operate the foot brake lever repeatedly until the brake linings lie on the brake disc and there is a pressure point.

# Changing rear brake linings 🔧

### Warning

**Skin irritation** Brake fluid can cause skin irritation on contact.

- Avoid contact with skin and eyes, and keep out of the reach of children.
- Wear suitable protective clothing and goggles.
- If brake fluid gets into your eyes, rinse thoroughly with water and contact a doctor immediately.

#### Warning

**Danger of accidents** Reduced braking effect caused by old brake fluid.

 Change the brake fluid of the front and rear brakes according to the service schedule. (Your authorized KTM workshop will be glad to help.)

### **Warning**

**Environmental hazard** Hazardous substances cause environmental damage.

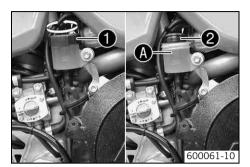

Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

#### Info

Never use DOT 5 brake fluid! It is silicone-based and purple in color. Oil seals and brake lines are not designed for DOT 5 brake fluid.

Avoid contact between brake fluid and painted parts. Brake fluid attacks paint! Use only clean brake fluid from a sealed container!

- Remove the rear brake linings. ⁴ ( p. 48)
- Stand the vehicle upright.
- Turn screw cap **1** in the direction of the arrow and remove it with membrane **2**.
- Press the brake piston back to its basic position and make sure that no brake fluid overflows from the brake fluid reservoir.
- Install the rear brake linings. ⁴ (▼ p. 49)
- Add brake fluid to level A.

Brake fluid DOT 4 / DOT 5.1 (\* p. 94)

Mount the screw cap with the membrane.

### Info

Clean up overflowed or spilt brake fluid immediately with water.

# Removing the front wheel 🌂

 Press the brake caliper onto the brake disc by hand in order to push back the brake pistons.

#### Info

Make sure when pushing back the brake pistons that you do not press the brake caliper against the spokes.

- Loosen screw ①.
- Remove screw ②.
- Loosen screw 3.
- Holding the front wheel, withdraw the wheel spindle. Take the front wheel out of the fork.

### Info

Do not pull the hand brake lever when the front wheel is removed. Always lay the wheel down in such a way that the brake disc is not damaged.

Remove the spacer 4.

# Installing the front wheel 🔦

### **Warning**

**Danger of accidents** Reduced braking efficiency due to oil or grease on the brake discs.

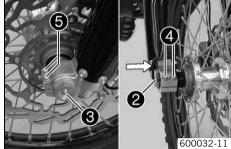

Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.

Clean and grease shaft seal ring • and bearing surface • of the spacer. Clean and grease the shaft seal ring on the right and the running surface of the wheel spindle.

Long-life grease (\* p. 96)

- Insert the spacer.

- Lift the front wheel into the fork, position it, and insert the wheel spindle 2.
- Mount and tighten screw 3.

Guideline

Screw, front wheel spindle	M24x1.5	40 Nm (29,5 lbf ft)
		(29.5 IDI IL)

#### Info

Ensure that the grip of the wheel spindle does not contact with the right fork leg.

- Operate the hand brake lever several times until the brake pads are lying correctly on the brake disc.
- Remove the motorcycle from the work stand. (\* p. 29)
- Pull the front wheel brake and push down hard on the fork several times to align the fork legs.
- Tighten screws 4 and 5.

Guideline

Screw, fork stub	M8	15 Nm	
		(11.1 lbf ft)	

# Removing rear wheel

- Jack up the motorcycle. (\* p. 29)
- Press the brake caliper onto the brake disc by hand in order to push back the brake pistons.

#### Info

Make sure when pushing back the brake piston that you do not press the brake caliper against the spokes.

- Remove nut ①.
- Remove chain adjuster ②.

- Pull out the wheel spindle only far enough to allow the rear wheel to be pushed for-
- Push the rear wheel forward as far as possible. Remove the chain from the rear sprocket
- Holding the rear wheel, withdraw the wheel spindle. Take the rear wheel out of the swingarm.

600036-10

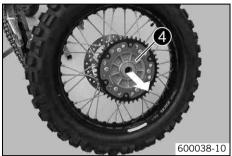

ward.

#### Info

Do not operate the foot brake when the rear wheel is removed. Always lay the wheel down in such a way that the brake disc is not damaged.

- Remove the spacer 3.

Remove the rear sprocket carrier 4.

# Installing the rear wheel 🔌

# **Warning**

**Danger of accidents** Reduced braking efficiency due to oil or grease on the brake discs.

- Always keep the brake discs free of oil and grease, and clean them with brake cleaner when necessary.

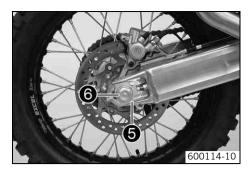

- Clean and grease the shaft seal rings and bearing surface of the spacer.
  - Long-life grease (\* p. 96)
- Insert the spacers.

- Clean and grease the shaft seal rings and bearing surface of the spacer in the rear sprocket carrier.
- Insert the rear sprocket carrier into the rear hub.

- Lift the rear wheel into the swingarm, position it, and insert the wheel spindle 3.
- Attach the chain 4.

- Position the chain adjuster **6**. Mount nut **6**, but do not tighten it yet.
- Adjust the chain tension. (\* p. 41)
- Operate the foot brake lever repeatedly until the brake linings lie on the brake disc and there is a pressure point.
- Remove the motorcycle from the work stand. (\* p. 29)

# **Checking the tire condition**

# Info

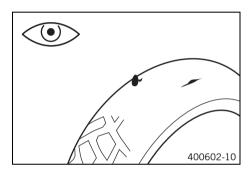

Only mount tires that have been approved and/or recommended by KTM.

Other tires could have a negative effect on riding behavior.

The type, condition and air pressure of the tires all have a major impact on the handling characteristics of the motorcycle.

The front and rear wheels must be mounted with tires with similar profiles.

Worn tires have a negative effect on riding behavior, especially on wet surfaces.

- Check the front and rear tires for cuts, run-in objects and other damage.
  - » If the tires exhibit cuts, run-in objects or other damage:
    - Change the tires.
- Check the depth of the tread.

#### Info

Note local national regulations concerning the minimum tread depth.

Minimum tread depth	≥ 2 mm (≥ 0.08 in)
---------------------	--------------------

- » If the tread depth is less than the minimum permissible depth:
  - Change the tires.
- Check the tire age.

### Info

The tire's date of manufacture is usually part of the tire markings and is indicated by the last four digits of the **DOT** marking. The first two digits refer to the week of manufacture and last two digits refer to the year of manufacture.

KTM recommends that the tires be changed after 5 years at the latest, regardless of the actual state of wear.

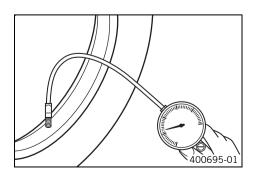

- » If a tire is more than 5 years old:
  - Change the tires.

### **Checking the tire air pressure**

#### Info

Low tire air pressure leads to abnormal wear and overheating of the tire. Correct tire air pressure ensures optimal riding comfort and maximum tire service life.

- Remove dust cap.
- Check tire air pressure when tires are cold.

Tire air pressure off road	
Front	1.0 1.5 bar (15 22 psi)
Rear	1.0 1.5 bar (15 22 psi)

Tire air pressure on road	
Front	1.5 bar (22 psi)
Rear	1.5 bar (22 psi)

- » If the tire pressure does not meet specifications:
  - Correct tire pressure.
- Mount dust cap.

# **Checking spoke tension**

### Warning

**Danger of accidents** Instable handling due to incorrect spoke tension.

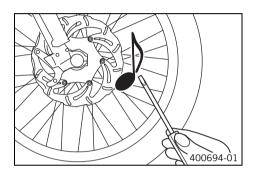

- Ensure that the spoke tension is correct. (Your authorized KTM workshop will be glad to help.)

### Info

A loose spoke can cause wheel imbalance, which leads to more loose spokes in a short time. If the spokes are too tight, they can break due to local overload.

Check the spoke tension regularly, especially on a new motorcycle.

Briefly strike each spoke with a screwdriver blade.

### Info

The frequency of the tone is a function of the spoke length and spoke diameter.

If you hear different tone frequencies from individual spokes of the same length and thickness, this is an indication of different spoke tensions.

### You should hear a high note.

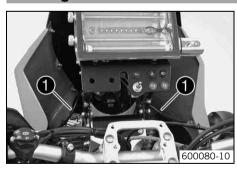

- » If the spoke tensions differ:
  - Correct the spoke tension.
- Check the spoke tension.

### Guideline

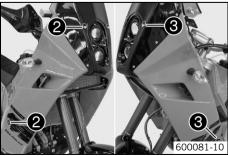

Spoke nipple, front wheel	M5	5 6 Nm (3.7 4.4 lbf ft)
Spoke nipple, rear wheel	M5	5 6 Nm (3.7 4.4 lbf ft)

Torque wrench with various accessories in set (58429094000)

### **Removing the trim**

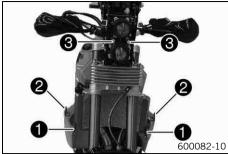

Loosen the plug-in connectors on the flasher cables ①.

- Open the quick release brackets 2 and 3.
- Remove the trim toward the front.

# **Mounting the trim**

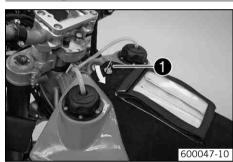

Insert the trim at the guides **1** and **3**.

When positioning the trim, exercise caution with the quick releases 2 to ensure that you do not damage the trim.

Align the trim and attach it with the quick releases 4 and 5.

# **Removing the seat**

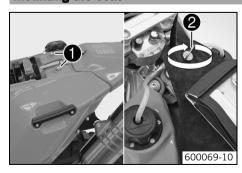

Lift the quick-locking clip • and rotate in the direction of the arrow.

Carefully push the seat to the rear and remove it.

# **Mounting the seat**

- Put down the seat and fit it into collar sleeves **1** of the fuel tank at the rear. Push the seat forward at the same time.
- Push the seat down at the front, lift the quick release bracket 2 and turn it in the direction of the arrow until it engages.
- Make sure that the seat is correctly locked in.

### Removing the front fuel tank

### Danger

**Fire hazard** Fuel is highly flammable.

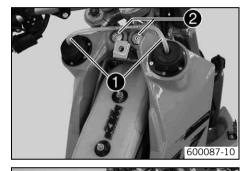

- Never refuel the vehicle near open flames or burning cigarettes, and always switch off the engine first. Be careful that no fuel is spilt, especially on hot vehicle components. Clean up spilt fuel immediately.
- Fuel in the fuel tank expands when warm and can escape if the tank is overfilled. See the notes on refueling.

### Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

- Avoid contact between fuel and skin, eyes and clothing. Do not inhale fuel vapors. If fuel gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If fuel is swallowed, contact a doctor immediately. Change clothing that has come into contact with fuel. Store fuel in a suitable canister according to regulations and keep it out of the reach of children.
  - Remove the trim. (\* p. 54)
  - Remove the seat. (\* p. 55)
  - Pull off the fuel tank breathers 1.
  - Remove screws 2.

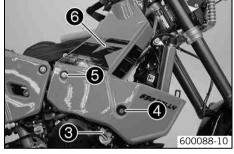

- Open the quick release of the fuel line 3 on the left and right.
- Remove screws **4** and **5** of the left and right halves of the fuel tank.
- Remove the fuel tank 6 on the left and right.

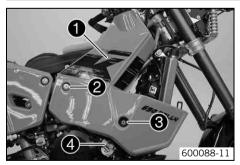

#### Info

Set the fuel tank halves down in an upright position as otherwise fuel can escape from the fuel tank breathers.

### Installing the fuel tank

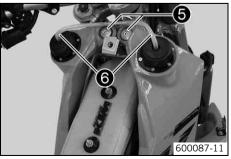

Position the fuel tank ● on the left and right. Mount and tighten screws ② and ⑤ on the left and right.

Guideline

Remaining screws, chassis	M8	25 Nm
		(18.4 lbf ft)

 Clean and connect the left and right quick releases of the fuel line 4 with each other.

Mount and tighten screws **6**.

Guideline

Remaining screws, chassis	M8	25 Nm
		(18.4 lbf ft)

- Connect the hoses 6 of the fuel tank breather without kinking.
- Mount the seat. (♥ p. 55)
- Mount the trim. (\* p. 55)

### Folding up the fuel tank at the rear

### Danger

Fire hazard Fuel is highly flammable.

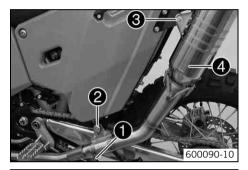

- Never refuel the vehicle near open flames or burning cigarettes, and always switch off the engine first. Be careful that no fuel is spilt, especially on hot vehicle components. Clean up spilt fuel immediately.
- Fuel in the fuel tank expands when warm and can escape if the tank is overfilled. See the notes on refueling.

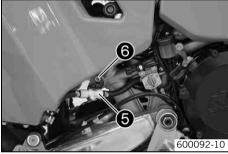

# Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

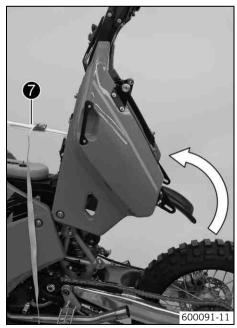

Avoid contact between fuel and skin, eyes and clothing. Do not inhale fuel vapors. If fuel gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If fuel is swallowed, contact a doctor immediately. Change clothing that has come into contact with fuel. Store fuel in a suitable canister according to regulations and keep it out of the reach of children.

- Remove the seat. (\* p. 55)
- Loosen the screw 1 on both sides.
- Remove screws 2 and 3 on both sides.
- Remove the main silencer 4 on both sides.

- Open the quick release of the fuel line 6.
- Remove screw **6**.

 Fold the rear tank upward in the direction of the arrow and use a belt to secure it to the handlebar.

### Lowering the fuel tank at the rear

### Danger

**Fire hazard** Fuel is highly flammable.

- Never refuel the vehicle near open flames or burning cigarettes, and always switch off the engine first. Be careful that no fuel is spilt, especially on hot vehicle components. Clean up spilt fuel immediately.
- Fuel in the fuel tank expands when warm and can escape if the tank is overfilled. See the notes on refueling.

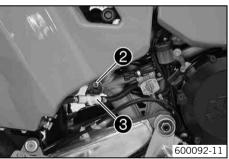

### Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

Avoid contact between fuel and skin, eyes and clothing. Do not inhale fuel vapors. If fuel gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If fuel is swallowed, contact a doctor immediately. Change clothing that has come into contact with fuel. Store fuel in a suitable canister according to regulations and keep it out of the reach of children.

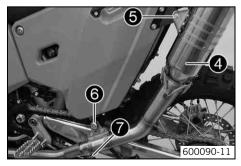

Detach the belt • and carefully position the rear tank.

Mount and tighten screw ❷.

Guideline

Screw, rear tank fixing	M8	20 Nm	Loctite® 243™
bracket		(14.8 lbf ft)	

- Connect the main silencers 4 with the manifolds on both sides. Mount the screw 6 on both sides but do not tighten it yet.
- Align the main silencer. Mount and tighten screws 3 and 7 on both sides.
   Guideline

Remaining screws, chassis	M8	25 Nm
		(18.4 lbf ft)

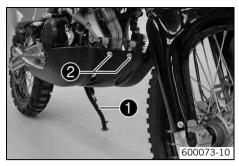

Tighten screw 6 on both sides.

Guideline

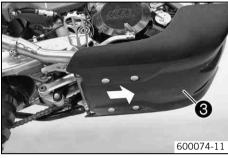

Remaining screws, chassis	M6	10 Nm (7.4 lbf ft)
---------------------------	----	--------------------

Mount the seat. (\* p. 55)

# Removing the motor guard

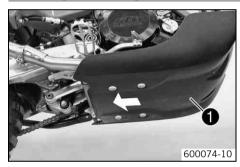

- Park the motorcycle on its side stand on a horizontal surface.
- Remove screws 2.

Pull the motor guard 3 forward out of the frame.

# **Mounting the motor guard**

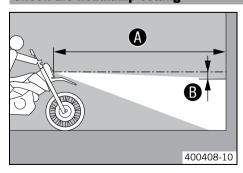

Insert the motor guard 1 into the frame.

Mount and tighten screws 2.
 Guideline

Screw, motor g	guard	M8	25 Nm
			(18.4 lbf ft)

# Check the headlamp setting

- On a light-colored wall behind a horizontal area, make a mark as high as the center of the low beam headlight.
- Make another mark at a distance of 9 under the first mark.

Guideline

Distance **3** 5 cm (2 in)

Guideline

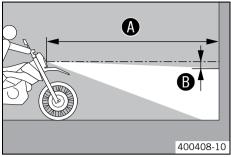

Distance **6** 5 m (16 ft)

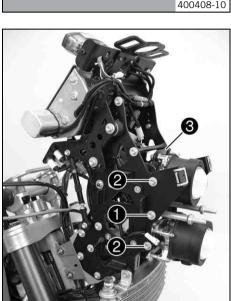

- Check the headlamp setting.

The boundary between light and dark must be exactly on the lower mark for a motorcycle with driver.

- » If the boundary between light and dark does not meet specifications:
  - Adjust the headlamp. (\*\* p. 60)

# **Adjusting the headlamp**

- Remove the trim. (\* p. 54)
- On a light-colored wall in front of which there is a horizontal surface, make a mark at the height of the center of the low beam headlamp.
- Make another mark at a distance B below the first mark.

Guideline

Distance **9** 5 cm (2 in)

 Position yourself with the motorcycle at a distance (3) in front of the wall and switch the low beam on.

Guideline

Distance **6** 5 m (16 ft)

- Loosen screws 1 and 2. Swivel the headlamp bracket 3 and headlamp of the ready-to-operate motorcycle with a rider until the light-dark boundary lies exactly on the lower mark.
- Tighten screws 1 and 2.
- Mount the trim. (\* p. 55)

# Removing the battery 🔧

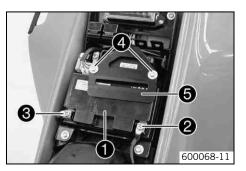

## **Warning**

**Risk of injury** Battery acid and battery gases cause serious cauterization.

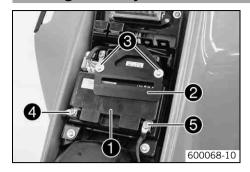

600102-10

- Keep batteries out of the reach of children.
- Wear suitable protective clothing and goggles.
- Avoid contact with battery acid and battery gases.
- Keep the battery away from sparks or open fire. Charge only in well ventilated rooms.
- In the event of skin contact, rinse with large amounts of water. If battery acid gets in the eyes, rinse with water for at least
   15 minutes and contact a doctor.

- Switch off all power consumers and switch off the engine.
- Remove the seat. (♥ p. 55)
- Disconnect the negative (minus) cable 2 of the battery 1.
- Pull back the plus pole cover and disconnect the positive (plus) cable 3 of the battery.
- Remove screws 4. Remove the retaining bracket 5.
- Lift the battery 1 up and remove it.

# Installing the battery &

Place the battery • in the battery holder.

Battery (YTZ10S) (\* p. 79)

Position the retaining bracket ②. Mount and tighten screws ③.
 Guideline

Remaining screws, chassis M6 10 Nm (7.4 lbf ft)

- Attach the plus cable **4** and replace the plus pole cover.

Guideline

Remaining screws, chassis M6 10 Nm (7.4 lbf ft)

Attach the minus cable **6** as shown in the diagram.

Guideline

Remaining screws, chassis M6 10 Nm (7.4 lbf ft)

Mount the seat. ( p. 55)

# Recharging the battery 🔦

### **Warning**

**Risk of injury** Battery acid and battery gases cause serious cauterization.

- Keep batteries out of the reach of children.
- Wear suitable protective clothing and goggles.
- Avoid contact with battery acid and battery gases.
- Keep the battery away from sparks or open fire. Charge only in well ventilated rooms.
- In the event of skin contact, rinse with large amounts of water. If battery acid gets in the eyes, rinse with water for at least 15 minutes and contact a doctor.

# Warning

**Environmental hazard** Battery parts and acid are harmful to the environment.

Do not discard batteries with the household trash. Dispose of a defective battery in an environmentally compatible manner.
 Give the battery to your KTM dealer or to a recycling center that accepts used batteries.

# Warning

**Environmental hazard** Hazardous substances cause environmental damage.

Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

#### Info

Even when there is no load on the battery, it still loses power steadily.

The charge state and the type of charge are very important for the service life of the battery.

Rapid recharging with a high charging current shortens the battery's service life.

If the charging current, charging voltage and charging time are exceeded, electrolyte escapes through the safety valves. This reduces the battery capacity.

If the battery is depleted from starting the vehicle repeatedly, the battery must be charged immediately.

If the battery is left in a discharged state for an extended period, it will become over-discharged and sulfate, destroying the battery.

The battery is maintenance-free, which means that the acid level does not need to be checked.

- Switch off all power consumers and switch off the engine.
- Remove the seat. (\* p. 55)
- Disconnect the minus (negative) cable of the battery to avoid damage to the motor-cycle's electronics.

- Connect the battery charger to the battery. Switch on the battery charger.

Battery charger (58429074000)

You can also use the battery charger to test rest potential and start potential of the battery, and to test the alternator. With this device, you cannot overcharge the battery.

### Info

Never remove lid 1.

Charge the battery with a maximum of 10% of the capacity specified on the battery housing ②.

Switch off the charger after charging. Disconnect the battery.
 Guideline

The charge current, charge voltage and charge time must not be exceeded.		
	Charge the battery regularly when the motorcycle is not in use	3 months

Mount the seat. (\* p. 55)

# **Removing the main fuse**

- Switch off all power-consuming components and switch off the engine.
- Remove the seat. (\* p. 55)
- Remove the protection cover ①.
- Remove the main fuse.

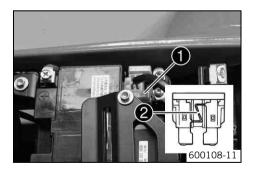

# **Installing the main fuse**

### Warning

**Fire hazard** The electrical system can be overloaded by the use of incorrect fuses.

- Use only fuses with the prescribed amperage. Never by-pass or repair fuses.

- Install the fuse.

Fuse (58011109110)

#### Info

A reserve fuse  $oldsymbol{0}$  is located in the starter relay. Replace a burned-out fuse  $oldsymbol{0}$  by an equivalent fuse only.

- Replace the protective cover.
- Mount the seat. (\*\* p. 55)

### **Checking the coolant level**

### Warning

Danger of scalding During motorcycle operation, the coolant gets very hot and is under pressure.

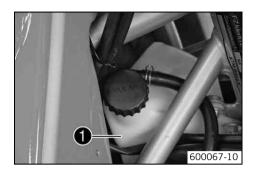

Do not remove the radiator cap, radiator hoses or other cooling system components when the engine is hot. Allow the
engine and cooling system to cool down. In case of scalding, rinse immediately with lukewarm water.

### **Warning**

**Danger of poisoning** Coolant is poisonous and a health hazard.

Avoid contact between coolant and skin, eyes and clothing. If it gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If coolant is swallowed, contact a doctor immediately. Change clothes that have come into contact with coolants. Keep coolant out of the reach of children.

#### Condition

Engine is cold.

- Stand the motorcycle upright on a horizontal surface.
- Check the coolant level in the compensating tank ①.

The compensating tank must be half full.

- » If the coolant level does not meet specifications:
  - Correct the coolant level.

#### Alternative 1

Coolant (\* p. 94)

#### Alternative 2

Coolant (mixed ready to use) (\* p. 94)

The radiator must be completely filled.

- » If the coolant level does not meet specifications:
  - Correct the coolant level and find out the cause of the loss.

#### Alternative 1

Coolant (\* p. 94)

#### Alternative 2

Coolant (mixed ready to use) (\* p. 94)

Mount the radiator cap.

# **Checking the coolant level and antifreeze**

### **Warning**

**Danger of scalding** During motorcycle operation, the coolant gets very hot and is under pressure.

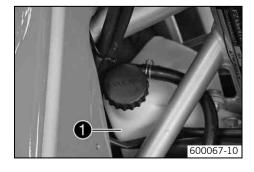

Do not remove the radiator cap, radiator hoses or other cooling system components when the engine is hot. Allow the
engine and cooling system to cool down. In case of scalding, rinse immediately with lukewarm water.

# Warning

**Danger of poisoning** Coolant is poisonous and a health hazard.

Avoid contact between coolant and skin, eyes and clothing. If it gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If coolant is swallowed, contact a doctor immediately. Change clothes that have come into contact with coolants. Keep coolant out of the reach of children.

### Condition

Engine is cold.

- Stand the motorcycle upright on a horizontal surface.
- Remove compensating tank cap  $oldsymbol{0}$  and the radiator cap.
- Check the coolant antifreeze.

-25... -45 °C (-13... -49 °F)

- » If the coolant antifreeze does not meet specifications:
  - Correct the coolant antifreeze.
- Check the coolant level in the compensating tank •.

The compensating tank must be half full.

- » If the coolant level does not meet specifications:
  - Correct the coolant level.

### Alternative 1

Coolant (\* p. 94)

### Alternative 2

Coolant (mixed ready to use) ( p. 94)

Check the coolant level in the radiator.

The radiator must be completely filled.

- If the coolant level does not meet specifications:
  - Correct the coolant level and find out the cause of the loss.

### Alternative 1

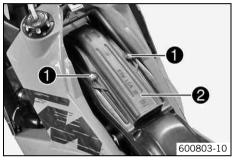

Coolant (\* p. 94)

### Alternative 2

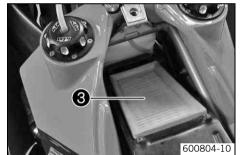

Coolant (mixed ready to use) ( p. 94)

Replace the compensating tank cap and the radiator cap.

# Removing the air filter &

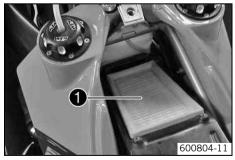

- Remove the seat. (\* p. 55)
- Remove screws **1**. Remove filter box top **2**.

**Engine failure** Unfiltered intake air has a negative effect on the service life of the engine.

- Never ride the vehicle without an air filter since dust and dirt can get into the engine and result in increased wear.
- Remove air filter 3.

# Installing the air filter 🔏

- Clean the air filter box.
- Mount air filter 1.

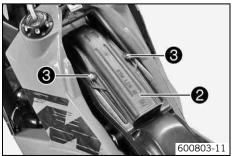

### Info

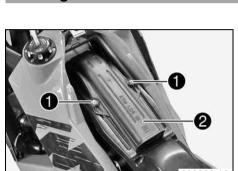

The air filter must lie flush against the air filter box along the entire sealing

- Hook filter box top 2 into the front of the air filter box and swing down.
- Mount and tighten screws 3. Guideline

Mount the seat. ( p. 55)

### **Carburetor - idle**

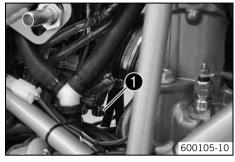

The idle setting of the carburetor has a big influence on the starting behavior, stable idling and the response to throttle opening. That means that an engine with a correctly set idle speed is easier to start than if the idle is set wrongly.

#### Info

The carburetor and its components are subject to increased wear caused by engine vibration. Wear can result in malfunctioning.

The idle mixture is adjusted with the idle mixture adjustment screw lacktriangle.

The idle speed is adjusted with the adjustment screw 2.

# Carburetor - adjusting the idle speed &

- Remove the front fuel tank. (\* p. 56)
- Screw in idle adjusting screw until it stops and then to the prescribed basic setting.

Guideline

- Let the engine run until it is warm.

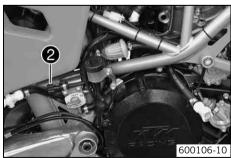

Guideline

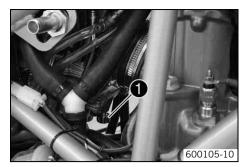

Warm-up time ≥ 5 min

Adjust the idle speed with adjusting screw ②.
 Guideline

- Turn idle adjusting screw 1 slowly until the idle speed begins to fall.
- Note the position and turn the idle adjusting screw slowly counterclockwise until the idle speed falls.
- Adjust to the point between these two positions with the highest idle speed.

# i

#### Info

If there is a big engine speed rise, reduce the idle speed to a normal level and repeat the above steps.

The extreme sport motorcyclist will set the mixture about 1/4 of a turn back from this ideal value (leaner, in a clockwise direction) since the engine becomes hotter in sporting use.

If the procedure described here does not lead to satisfactory results, the cause may be a wrongly dimensioned idling jet.

If you can turn the idle adjusting screw to the end without any change of engine speed, you have to insert a smaller idling jet.

The idle adjusting screw must not be opened more than two turns. If more than two turns are necessary (rich mixture), use a larger idling jet. After changing the idling jet, start from the beginning with the adjusting steps.

Adjust the idle speed with adjusting screw ②.
 Guideline

Choke function deactivated – The choke knob is engaged in the guide. ( p. 18)

Idle speed 1,600... 1,700 rpm

### Info

Following extreme air temperature or altitude changes, adjust the idle speed again.

# Checking the engine oil level

#### Info

The engine oil level must be checked when the engine is warm.

400304-10

- Stand the motorcycle upright on a horizontal surface.

#### Condition

The engine is at operating temperature.

Check the engine oil level.

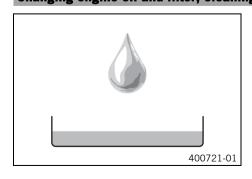

### Info

After switching off the engine, wait one minute before checking the level.

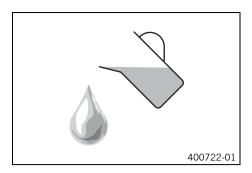

The engine oil reaches the top of the viewer **a**.

- » When the engine oil does not reach the top of the viewer:
  - Add engine oil. (♥ p. 70)

# Changing engine oil and filter, cleaning oil screens &

- Remove the motor guard. (\* p. 59)
- Drain the engine oil. 🔌 (🕶 p. 67)
- Remove the oil filter. 🔌 (🕶 p. 67)
- Clean the oil screens. 🔌 (\* p. 68)

- Install the oil filter. ♣ (♥ p. 69)
- Fill up with engine oil. ◀ (\* p. 70)
- Mount the motor guard. (♥ p. 59)

# Draining the engine oil 🔧

# **Warning**

**Danger of scalding** Engine oil and gear oil get very hot when the motorcycle is ridden.

- Wear appropriate protective clothing and safety gloves. In case of burns, rinse immediately with lukewarm water.

### **Warning**

**Environmental hazard** Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

### Info

Drain the engine oil only when the engine is warm.

- Stand the motorcycle on its side stand on a horizontal surface.
- Place a suitable container under the engine.
- Remove oil drain plug and the seal ring.
- Completely drain the engine oil.
- Thoroughly clean the oil drain plug with a magnet.
- Clean the sealing area on the engine.
- Mount oil drain plug with the seal ring and tighten it.
   Guideline

Oil drain plug with magnet	M12x1.5	20 Nm
		(14.8 lbf ft)

# Removing the oil filter 🔌

### Warning

**Danger of scalding** Engine oil and gear oil get very hot when the motorcycle is ridden.

Wear appropriate protective clothing and safety gloves. In case of burns, rinse immediately with lukewarm water.

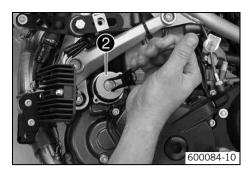

### **Warning**

**Environmental hazard** Hazardous substances cause environmental damage.

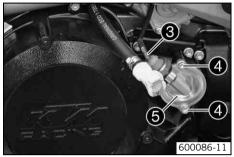

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

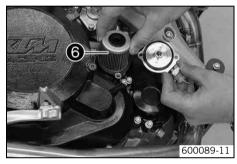

- Remove the front fuel tank. (\* p. 56)
- Place a suitable container under the engine.
- Remove screws **①**. Take off the oil filter cover with the O-ring.

- Pull the oil filter **2** out of the engine housing.
  - Circlip pliers reverse (51012011000)
- Completely drain the engine oil.
- Thoroughly clean parts and sealing area.

- Disconnect the plug 3. Remove screws 4.
- Remove the oil filter cover **5** with the O-ring.

- Pull the oil filter **6** out of the engine housing.
- Completely drain the engine oil.
- Thoroughly clean parts and sealing area.

# Cleaning the oil screens 🔏

# **Warning**

**Danger of scalding** Engine oil and gear oil get very hot when the motorcycle is ridden.

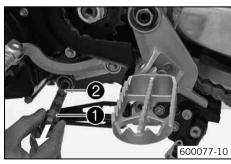

- Wear appropriate protective clothing and safety gloves. In case of burns, rinse immediately with lukewarm water.

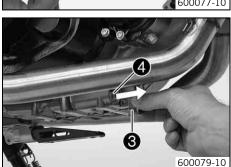

# **Warning**

**Environmental hazard** Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

- Place a suitable container under the engine.
- Remove plug **1** with oil screen **2** and O-ring.

- Remove plug 3 with oil screen 4 and 0-ring.
- Completely drain the remaining engine oil.
- Thoroughly clean parts and sealing areas.

Fit and tighten plug 3 with oil screen 4 and O-ring. Guideline

Plug, oil screen	M20x1.5	15 Nm (11.1 lbf ft)
------------------	---------	------------------------

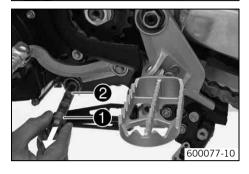

### Info

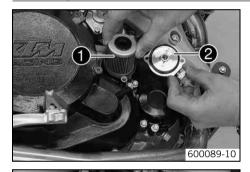

Plugs 1 and 3 and oil screens 2 and 4 are identical.

Fit and tighten plug **1** with oil screen **2** and O-ring. Guideline

Plug, oil screen	M20x1.5	15 Nm
		(11.1 lbf ft)

# Installing the oil filter 🔦

- Insert the oil filter **1**.
- Oil the O-ring of the oil filter cover and mount it with the oil filter cover **②**.

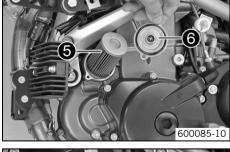

Mount and tighten screws 3. Guideline

Screw, oil filter cover	M5	6 Nm (4.4 lbf ft)

Connect the plug **4**.

- Insert the oil filter **6**.
- Oil the O-ring of the oil filter cover and mount it with the oil filter cover **6**.

Mount and tighten screws **7**. Guideline

Screw, oil filter cover	M5	6 Nm (4.4 lbf ft)

Install the fuel tank. (\* p. 56)

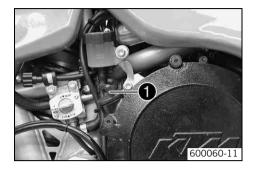

# Filling up with engine oil 🔦

#### Info

Too little engine oil or poor-quality engine oil results in premature wear to the engine.

- Remove the screw cap **1** on the clutch cover and fill up with engine oil.

Engine oil	1.80 l (1.9 qt.)	Engine oil (SAE 10W/60) (00062010035) ( p. 94)
		Engine oil (SAE 20W/60) ( p. 94)

Mount and tighten screw cap ①.

### **Danger**

**Danger of poisoning** Exhaust gases are poisonous and inhaling them may result in unconsciousness and/or death.

- When running the engine, always make sure there is sufficient ventilation, and do not start or run the engine in an enclosed space without an effective exhaust extraction system.
- Start the engine and check that it is oil-tight.
- Check the engine oil level. (\* p. 66)

# **Adding engine oil**

#### Info

Too little engine oil or poor-quality engine oil results in premature wear to the engine.

- Remove screw connection **1** on the clutch cover and fill up with engine oil.

Engine oil (SAE 10W/60) (00062010035) ( p. 94)

Engine oil (SAE 20W/60) (\* p. 94)

#### Info

For optimal performance of the engine oil, do not mix different types of engine oil.

We recommend making an oil change in this case.

Mount and tighten screw cap ①.

### **Danger**

**Danger of poisoning** Exhaust gases are poisonous and inhaling them may result in unconsciousness and/or death.

- When running the engine, always make sure there is sufficient ventilation, and do not start or run the engine in an enclosed space without an effective exhaust extraction system.
- Start the engine and check that it is oil-tight.

Faults	Possible cause	Action

CLEANING 73

### **Cleaning motorcycle**

#### Note

Material damage Damage and destruction of components by high-pressure cleaning equipment.

Never clean the vehicle with high-pressure cleaning equipment or a strong water-jet. The excessive pressure can penetrate electrical components, socket connects, throttle cables, and bearings, etc., and can damage or destroy these parts.

#### Warning

**Environmental hazard** Hazardous substances cause environmental damage.

- Oil, grease, filters, fuel, cleaners, brake fluid, etc., should be disposed of as stipulated in applicable regulations.

### Info

If you clean the motorcycle regularly, its value and appearance are maintained over a long period. Avoid direct sunshine on the motorcycle during cleaning.

- Close off the exhaust system to prevent water from entering.
- First remove coarse dirt particles with a gentle water spray.
- Spray very dirty areas with a normal motorcycle cleaner and then clean with a paintbrush.

Motorcycle cleaner (\* p. 96)

#### Info

Use warm water containing normal motorcycle cleaner and a soft sponge.

If the vehicle was operated in road salt, clean it with cold water. Warm water would enhance the corrosive effects of salt.

After the motorcycle has been thoroughly cleaned with a gentle jet of water, it should be dried with compressed air and a cloth.

#### Warning

**Danger of accidents** Reduced braking efficiency due to wet or dirty brakes.

- Clean or dry dirty or wet brakes by riding and braking gently.
- After cleaning, ride the vehicle a short distance until the engine is warm, applying the brakes occasionally.

### Info

The heat produced causes water at inaccessible positions in the engine and the brakes to evaporate.

- Push back the protection caps on the handlebar controls to allow water that may have penetrated there to evaporate.
- After the motorcycle has cooled off, lubricate all moving parts and bearings.
- Clean the chain. (▼ p. 39)
- Treat bare metal parts (except for brake discs and exhaust system) with anti-corrosion materials.

Cleaning and preserving materials for metal, rubber and plastic (\* p. 96)

Treat all painted parts with a mild paint polish.

High-luster polish for paint (\* p. 96)

To prevent electrical problems, treat electric contacts and switches with contact spray.

Contact spray (\* p. 96)

Lubricate the steering lock.

Universal oil spray (\* p. 96)

STORAGE 74

#### **Storage**

#### Warning

**Danger of poisoning** Fuel is poisonous and a health hazard.

Avoid contact between fuel and skin, eyes and clothing. Do not inhale fuel vapors. If fuel gets into your eyes, rinse immediately with water and contact a doctor. Wash affected skin areas immediately with soap and water. If fuel is swallowed, contact a doctor immediately. Change clothing that has come into contact with fuel. Store fuel in a suitable canister according to regulations and keep it out of the reach of children.

#### Info

If you want to garage the motorcycle for a longer period, take the following actions.

Before storing the motorcycle, check all parts for function and wear. If service, repairs or replacements are necessary, you should do this during the storage period (less workshop overload). In this way, you can avoid long workshop waiting times at the start of the new season.

- Clean the motorcycle. (\* p. 73)
- Change the engine oil and filter, clean the oil screens. ⁴ ( p. 66)
- Check the coolant level and antifreeze. (\* p. 63)
- Drain the fuel from the tanks into a suitable container.
- Drain the fuel from the carburetor into a suitable container.
- Check the tire air pressure. (♥ p. 53)
- Remove the battery. ◀ (\* p. 60)
- Recharge the battery. (\* p. 61)

Guideline

Storage temperature of battery without direct sunshine

0... 35 °C (32... 95 °F)

The storage place should be dry and not subject to large temperature differences.

#### nfo

KTM recommends jacking up the motorcycle.

- Jack up the motorcycle. (\* p. 29)
- Cover the motorcycle with a tarp or cover that is permeable to air.

### Info

Do not use non-porous materials since they prevent humidity from escaping, thus causing corrosion.

Avoid running the engine for a short time only. Since the engine cannot warm up properly, the water vapor produced during combustion condenses and causes valves and exhaust system to rust.

#### Putting the motorcycle into operation after storage

- Remove the motorcycle from the work stand. (\* p. 29)
- Install the battery. ⁴ (▼ p. 61)
- Refuel. (**\*** p. 25)
- Checks before putting into operation. (♥ p. 23)
- Take a test ride.

Design	1-cylinder 4-stroke engine, water-cooled
Displacement	654 cm <sup>3</sup> (39.91 cu in)
Stroke	80 mm (3.15 in)
Bore	102 mm (4.02 in)
Compression ratio	11.8:1
Idle speed	1,600 1,700 rpm
Control	OHC, 4 valves controlled via rocker arm, chain drive
Valve diameter, intake	40 mm (1.57 in)
Valve diameter, exhaust	34 mm (1.34 in)
Valve play, cold	0.07 0.13 mm (0.0028 0.0051 in)
Crankshaft bearing	2 roller bearings
Engine lubrication	Semi-dry sump lubrication with two rotor pumps
Primary transmission	36:79
Clutch	Multidisc clutch in oil bath/hydraulically activated
Transmission ratio	·
1st gear	14:35
2nd gear	16:28
3rd gear	21:28
4th gear	23:26
5th gear	24:25
6th gear	25:24
Alternator	12 V, 224 W
Ignition	Contactless controlled fully electronic ignition with digital ignition adjustment
Spark plug	NGK LKAR 8AI - 9
Spark plug electrode gap	0.9 mm (0.035 in)
Cooling	Water cooling, permanent circulation of coolant by water pump

SUBSTANCES 94

#### Brake fluid DOT 4 / DOT 5.1

#### **According to**

- DOT

#### **Guideline**

Use only brake fluid that complies with the specified standards (see specifications on the container) and that possesses the corresponding properties. KTM recommends Castrol and Motorex® products.

## Supplier

#### Castrol

- RESPONSE BRAKE FLUID SUPER DOT 4

#### Motorex®

Brake Fluid DOT 5.1

#### Coolant

#### Guideline

Use only suitable coolant (also in countries with high temperatures). Use of low-quality antifreeze can lead to corrosion and foaming. KTM recommends Motorex® products.

#### Mixture ratio

Antifreeze protection: -2545 °C (-13	50 % corrosion inhibitor/antifreeze
−49 °F)	50 % distilled water

#### **Coolant (mixed ready to use)**

Antifreeze	-40 °C (-40 °F)

## Supplier

#### Motorex®

Anti Freeze

## Engine oil (SAE 10W/60) (00062010035)

#### **According to**

- JASO T903 MA (\* p. 97)
- SAE (♥ p. 97) (SAE 10W/60)
- KTM LC4 2007+

## Guideline

Use only engine oils that comply with the specified standards (see specifications on the container) and that possess the corresponding properties. KTM recommends Motorex® products.

Synthetic engine oil

#### **Supplier**

### Motorex®

Motorex<sup>®</sup> KTM Cross Power 4T

## Engine oil (SAE 20W/60)

#### **According to**

- JASO T903 MA (♥ p. 97)
- SAE (♥ p. 97) (SAE 20W/60)

#### Guideline

Use only engine oils that comply with the specified standards (see specifications on the container) and that possess the corresponding properties. KTM recommends Motorex® products.

Synthetic engine oil

## Supplier Motorex®

KTM Racing 4T

SUBSTANCES 95

#### Fork oil (SAE 5)

#### **According to**

SAE ( p. 97) (SAE 5)

#### Guideline

 Use only oils that comply with the specified standards (see specifications on the container) and that possess the corresponding properties. KTM recommends Motorex® products.

## Supplier

## Motorex®

- Racing Fork Oil

## Hydraulic fluid (15)

#### **According to**

- ISO VG (15)

#### **Guideline**

 Use only hydraulic fluid that complies with the specified standards (see specifications on the container) and that possesses the corresponding properties. KTM recommends **Motorex<sup>®</sup>** products.

#### **Supplier**

## Motorex®

- Hydraulic Fluid 75

## Shock absorber oil (SAE 2,5) (50180342S1)

#### **According to**

SAE (♥ p. 97) (SAE 2,5)

#### **Guideline**

 Use only oils that comply with the specified standards (see specifications on the container) and that possesses the corresponding properties.

## Super unleaded (ROZ 95 / RON 95 / PON 91)

#### **According to**

DIN EN 228 (ROZ 95 / RON 95 / PON 91)

#### **Chain cleaner**

#### Guideline

KTM recommends Motorex® products.

#### **Supplier**

#### Motorex®

- Chain Clean 611

## Cleaning and preserving materials for metal, rubber and plastic

#### Guideline

KTM recommends Motorex® products.

### Supplier

#### Motorex®

Protect & Shine 645

## **Contact spray**

#### Guideline

KTM recommends Motorex® products.

#### **Supplier**

#### Motorex®

Accu Contact

## **High-luster polish for paint**

#### Guideline

KTM recommends Motorex® products.

#### **Supplier**

#### Motorex®

- Moto Polish

## **Long-life grease**

#### Guideline

KTM recommends Motorex® products.

### **Supplier**

## Motorex®

- Fett 2000

## **Motorcycle cleaner**

### Guideline

- KTM recommends **Motorex®** products.

## Supplier

### Motorex<sup>®</sup>

- Moto Clean 900

## **Off-road chain spray**

#### **Guideline**

KTM recommends Motorex® products.

#### **Supplier**

## Motorex®

- Chain Lube 622

## **Universal oil spray**

#### **Guideline**

KTM recommends Motorex® products.

### **Supplier**

#### **Motorex**®

- Joker 440 Universal

STANDARDS 97

## **JASO T903 MA**

Different technical development directions required a new specification for 4-stroke motorcycles – the JASO T903 MA Standard. Earlier, engine oils from the automobile industry were used for 4-stroke motorcycles because there was no separate motorcycle specification. Whereas long service intervals are demanded for automobile engines, high performance at high engine speeds are in the foreground for motorcycle engines. With most motorcycles, the gearbox and the clutch are lubricated with the same oil as the engine. The JASO MA Standard meets these special requirements.

#### SAE

The SAE viscosity classes were defined by the Society of Automotive Engineers and are used for classifying oils according to their viscosity. The viscosity describes only one property of oil and says nothing about quality.
